Bergische Universität Wuppertal
v0.1

March 16, 2021

This package provides a modification to the biblatex standard styles for relating cited works to the license under which they were published. This is done via biblatex' build in `related` mechanism and `relatedtype = license`. This package basically provides this new relatedtype, the bibmacros for typesetting these related entries and some additional styling options.

Contents

1 Options **2**

2 Usage **2**
2.1 `introtext` 3
2.2 `link` 4
2.3 `url` 4
2.4 `shorttitle` of the license 4

The package is loaded via

```
\usepackage[options]{biblatex-license}
```

and has to be loaded *after* the `biblatex` package. The package sets the `biblatex` option `related = true`.

1 Options

Name	Function	Possible Values	Default
`license`	Decides if and how the license is to be printed.	short, full, off	short
`url`	Switch for deciding if the url of the license should be explicitly printed.	true, false	false
`link`	When set to `true` and `url` is set to `off`, the title of the license becomes an `\href`, i.e. a hyperlink.	true, false	true
`introtext`	Makes it possible to replace the language specific intro text (e.g. "licensed under") with custom text.	any text	

2 Usage

Consider the following bibliography:

```
@Misc{CreativeCommons4.0,
  author     = {{Creative Commons}},
  title      = {{Attribution-NonCommercial-ShareAlike 4.0 International}},
  date       = {2013-11-25},
  url        = {https://creativecommons.org/licenses/by-nc-sa/4.0/},
  urldate    = {2019-10-01},
  shorttitle = {{CC BY-NC-SA 4.0}},
}

@book{Payne2019,
  author = {Blakeley Hoffman Payne},
  editor = {{MIT Media Lab Personal Robots Group} and Cynthia Breazeal},
  title = {An Ethics of Artificial Intelligence Curriculum for Middle
           School Students},
  related = {CreativeCommons4.0},
  relatedtype = {license},
  url = {https://t1p.de/rwlp},
  urldate = {2020-01-27},
  date = {2019-08},
}
```

Note, that `Payne2019` has the fields `related` and `relatedtype` defined. `related` is pointing via the label to the entry corresponding to the license under which `Payne2019`

was published: `CreativeCommons4.0`. The `relatedtype = {license}` is necessary for `biblatex` to know how this relation should be handled. Please see the `biblatex` user guide (§3.4 *Related Entries*) for more information on related entries.

Now if `biblatex` is loaded with the following options:

```
\usepackage[
  backend=biber
 ,sortlocale=en_EN%.UTF-8
 ,style=authoryear
 ,bibencoding=UTF8
 ,block=space
]{biblatex}
```

And `biblatex-license` is loaded the default way:

```
\usepackage{biblatex-license}
```

The bibliopgraphic entry of `Payne2019` would look like this:

Payne, Blakeley Hoffman (Aug. 2019). *An Ethics of Artificial Intelligence Curriculum for Middle School Students*. Ed. by MIT Media Lab Personal Robots Group and Cynthia Breazeal. URL: `https://t1p.de/rwlp` (visited on 01/27/2020). Licensed under CC BY-NC-SA 4.0.

The default way of loading `biblatex-license` is equivalent to:

```
\usepackage[license=short,
            url=false,
            link=true,
            introtext={default}]
            {biblatex-license}
```

2.1 `introtext`

Note the text "Licensed under" in the bibliography. This text is, as of now, only translated to german but can be changed via the option `introtext` like so:

```
\usepackage[introtext={Some text}]{biblatex-license}
```

2.2 `link`

Also note that in the example output above the title of the license is itself a link to where the `url`-field of the license entry inside the bib-file is pointing. This link is made via `\href`.

2.3 `url`

It might be better to explicitly print the url of the license, which can be done via the `url=true` option. If printed this way, the option `link` has no effect on if this url is itself a hyperlink or not aus the url-field is handled by biblatex itself.

2.4 `shorttitle` of the license

If a `shorttitle` is provided for the license inside the bib-file, the shorttitle will always be preferred.
