Introduction

1.1 Loading the style

The style is self-contained, so you can load it with biblatex:

```
\usepackage[style=oxnum]{biblatex}
```

The style has some options additional to the regular biblatex ones:

anon=literal|long|short (default short, initially literal)

Affects what happens if the author name matches the value of \oxrefanon. By default, this is 'Anonymous', but you could change it a different word (such as 'Anonimo') instead.

- **literal** means no special handling is used.
- **long** will print the unabbreviated localization string anon ('Anonymous') instead of the author name in the bibliography.
- **short** will print the abbreviated localization string anon ('Anon.') instead of the author name in the bibliography.

bookseries=in|out (default in, initially in)

Puts the series information for a book **in**side or **out**side the parenthetical publication block.

court-plain=true|false (default true, initially false)

Prints courts of decision without parentheses.

dashed=true|false (default true, initially false)

In the biblography, replaces recurring author/editor names with a dash.

ecli=yes|only|no (default yes, initially yes)

Determines when ECLI numbers for EU legal cases are printed (if provided).

- **yes** prints the ECLI number in addition to the official report.
- **only** prints the ECLI number instead of the official report.
- **no** only prints the ECLI number if the case is otherwise unreported.

isourls=true|false (default true, initially false)

Surrounds URLs with angle brackets.

issuedate-plain=true|false (default true, initially false)

Removes the parentheses around the date of a periodical without a volume number. This can also be set on a per-type and per-entry basis. (This option was previously called varissuedate.)

issuestyle=slash|colon|comma|parens (default slash, initially slash)

Affects how journal volumes and numbers are printed.

- **slash** separates the two with a solidus, e.g. '23/2'.
- **colon** separates the two with a colon and space, e.g. '23: 2'.
- **comma** separates the two with a comma and space, e.g. '23, 2'.
- **parens** sets off the issue number in parentheses, e.g. '23 (2)'. It is intended for use with oxalph/oxyear and not recommended for this style.

nolocation (no value, initially unset)

Replaces missing locations with 'n.p.' or the localized equivalent in books, collections, reference works, proceedings, and similar entry types. Once set, this option cannot be overridden. Alternatively, it may be set on a per-entry basis.

nopublisher (no value, initially unset)

Removes publisher name from all entries. Once set, this option cannot be overridden.

norelatedin=true|false (default true, initially false)

Suppresses the printing of the in localization string in circumstances where it would appear directly following a related string such as 'originally published as'. It can also be set on a per-type and per-entry basis. The effects of this key are not well tested, so do please get in touch (see below) if you encounter problems with it.

relationpunct=period|comma|semicolon|colon|space (default semicolon, initially semicolon)

Sets the punctuation that precedes the relatedtype localization string. An additional space is assumed unless the value is space. This can also be set on a per-type and per-entry basis. Note that the general and per-type settings are ignored for some values of relatedtype, but the per-entry setting is always effective.

scnames=true|false (default true, initially false)

Prints initial author or editor names in bibliography entries in small capitals.

thesis=in|out|plain (default out, initially out)

Puts the thesis type **in**side or **out**side the parenthetical publication block, while **plain** removes the parentheses entirely.

timefirst=true|false (default true, initially false)

Prints the time (if provided) before the date instead of after it. This can also be set on a per-type and per-entry basis.

usenametitles=true|false (default true, initially true)

Controls whether titular prefixes such as Revd, Dr, Mrs, Sir, and so on are printed. (See Section 2.5 for how to supply titles as part of a name.) This can also be set on a per-type and per-entry basis.

Oxref makes use of Biber-specific techniques to solve some of the challenges presented by Oxford style. It will not stop you from using BibTEX instead but, if you do, only simple and standard entries will work. In particular, manuscripts, legal references and anything involving related entries will be adversely affected.

1.2 How to use this document

Bibliographical items are given throughout this document, and serve three purposes:

- To demonstrate which of the variations discussed by the *Oxford Guide to Style* and *New Hart's Rules* have been chosen in this style.
- To help me, as package author, check that the style is working as intended.
- To show you, as document author, how to use the style to get the effect you want.

Examples that follow standard biblatex semantics, and are therefore (mostly) portable to other styles, are in green:

Reference text as it should look.

Reference text as generated by biblatex.

```
Code used in bibliography file.
```

Source

Examples that have been 'hacked' in some way, and are therefore not portable to other styles, are in amber:

Reference text as it should look.

Reference text as generated by biblatex.

```
Code used in bibliography file.
```

Source

Where a source is provided, it refers to a section from one of the reference works below:

OGS *The Oxford Guide to Style*, ed. and comp. R. M. Ritter (Oxford, UK: Oxford University Press, 2002).

NHR *New Hart's Rules: The Oxford Guide to Style*, 2nd edn., ed. Anne Waddingham (Oxford, UK: Oxford University Press, 2014).

Where the source is starred (*), this indicates the example is not quite how it appears in the book, usually because the original is demonstrating an option that is not the oxref default.

1.3 Design philosophy

The stipulations given by the *Oxford Guide to Style* regarding citations and references amount not so much to a consistent style as a body of advice for creating one. Unlike the style manuals published by the American Psychological Association, the Modern Language Association, and the University of Chicago to name but three, the emphasis of the Oxford guide is to describe good practice rather than prescribe a particular style. This means that when it comes to oxref, there are decisions to be made as to which variations to support by default, which to support as options, and which to ignore quietly.

The situation is complicated further by the nature of the available versions. The 2002 guide remains the most comprehensive in terms of rules, principles and examples. The succeeding versions, under the title *New Hart's Rules*, update the aspects of the 2002 guide that now seem somewhat dated, such as its handling of URLs and DOIs, and have more of an eye on machine processing of bibliographies. They do, however, introduce additional variations with less of a steer on what is preferred, and are considerably shorter with fewer examples.

The approach of oxref is to follow the 2014 *New Hart's Rules* as much as possible, but where variations are given without strong preference, or where guidance is lacking, to follow the preferences of the 2002 guide. Where the practices of the humanities and the sciences are contrasted,

the former are followed for oxnotes/oxnum and the latter for oxalph/oxyear. Where neither version gives explicit guidance on citing a resource supported by biblatex, oxref extrapolates from what is provided, guided by standard biblatex and other major referencing styles.

Where it is practical to do so, ways and means of achieving the variations defined by the two guides are provided, but by no means all of them will be supported.

1.4 Technical documentation

For information on installing the styles, and for the documented source code, see the separate documentation file `oxref.pdf`

1.5 Stability

The oxref family of styles is currently at v2.2.

I have no plans to change the default (expected) behaviour of the styles, and will do my best to avoid backwards-incompatible changes, though alternative behaviour may be added. If changes are introduced that alter the advertised output, this will be signalled by a change in major version number.

Please report any bugs you discover on the GitHub issue tracker.[1] You are also welcome to leave your thoughts there on how the styles could be improved, especially for the cases not covered by the two style manuals.

Citations and common formatting

The oxnum bibliography style is intended for use with a numeric citation style, and indeed loads a tweaked version of a standard biblatex one.

2.1 Test citations

Both the *Oxford Guide to Style* and *New Hart's Rules* describe a system that uses simple numbers as citation labels, almost as if they were endnotes. This system does not support page references, unlike the citation labels familiar to LaTeX users. In the absence of a better idea, therefore, this style treats citation labels rather like author–year parenthetical citations and adopts the conventions from oxyear. Pages are set off with a colon, and multiple works are separated with a semicolon.

```
Test \parencites%
  [93, 96]{hankinson1988mmm}%
  [72]{hankinson1989gba}
```

Test [76: 93, 96; 75: 72]

Test [76: 93, 96; 75: 72]

2.2 Missing or inferred attribution

2.2.1 Missing attribution

Oxref will not automatically generate anonymous labels for you, but if you use the anon option (see Section 1.1), you can transform an author name of 'Anonymous' (or whatever \oxrefanon is set to) in your .bib file to either the long or short localization string anon.

Anon., *Stories after Nature* (London: Allman, 1822).

Anon., *Stories after Nature* (London: Allman, 1822).

```
@book{anon1822san,
  author = {Anonymous},
  title = {Stories after Nature},
  location = {London},
  publisher = {Allman},
  date = {1822}}
```

OGS §15.2.1

Anon., *Liber usualis* (Tournai: Desclée, 1956).

Anon., *Liber usualis* (Tournai: Desclée, 1956).

```
@book{anon1956lu,
  author = {Anonymous},
  title = {Liber usualis},
  location = {Tournai},
  publisher = {Desclée},
  year = {1956}}
```

OGS §15.2.1

```
\textcite{anon1822san,anon1956lu}
```

Anon. [6; 7]

2.2.2 Pseudepigraphy

Some older works are known to have been written pseudepigraphically, that is, falsely attributed to a more famous author. The way of indicating this in Oxford style, if desired, is to put '(Ps.-)' after the name in the bibliography.

With oxref, you can achieve this by annotating the name with the keyword `pseudo`.

```
\textcite{boethius1976dds}
```

Boethius [30]

Boethius (Ps.-), *De disciplina scolarium: Édition critique, introduction et notes*, ed. Olga Weijers (Leiden, 1976).

Boethius (Ps.-), *De disciplina scolarium: Édition critique, introduction et notes*, ed. Olga Weijers (Leiden, 1976).

```
@book{boethius1976dds,
  author = {Boethius},
  author+an = {1=pseudo},
  title = {De disciplina scolarium},
  subtitle = {Édition critique, introduction et notes},
  editor = {Olga Weijers},
  location = {Leiden},
  date = {1976}}
```

OGS §15.2.1

2.2.3 Inferred attribution

If the attribution is missing from the work but may be inferred from other sources, Oxford style is to give the attribution in square brackets.

With oxref, you can achieve this by annotating the whole name field (usually `author` or `editor`) with the keyword `inferred`. You can also annotate names individually within the list, if only some of them should be taken as inferred.

[James Balfour], *Philosophical Essays* (Edinburgh, 1768).

[James Balfour], *Philosophical Essays* (Edinburgh, 1768).

```
@book{balfour1768pe,
  author = {James Balfour},
  author+an = {=inferred},
  title = {Philosophical Essays},
  location = {Edinburgh},
  date = {1768}}
```

OGS §15.2.1

You can also use the syntax from biblatex-realauthor. If you do not specify the `author`, then `realauthor` is treated as an alias for `author` annotated with the keyword `inferred`. The equivalent is true for `realeditor`. Note, however, that oxref does not recognize the `userealauthor` and `userealeditor` options.

2.2.4 Pseudonyms

If an author publishes under a pen name, and you want to link the names in the bibliography, the name as given in the work should be given first, immediately followed by the other name in parentheses (*Oxford Guide to Style*) or brackets (*New Hart's Rules*).

If you don't mind the second name being printed as-is, the canonical place to include it is the `nameaddon` field.

C. L. Dodgson [Lewis Carroll], *Symbolic Logic* (Oxford, 1896).

C. L. Dodgson [Lewis Carroll], *Symbolic Logic* (Oxford, 1896).

```
@book{dodgson1896sl,
  author = {C. L. Dodgson},
  nameaddon = {Lewis Carroll},
  title = {Symbolic Logic},
  location = {Oxford},
  date = {1896}}
```

NHR §18.2.2

You can switch to using parentheses for name addons by changing the `nameaddon` field format.

```
\DeclareFieldFormat{nameaddon}{\mkbibparens{#1}}
```

If you do want the second name to be normalized, or you are dealing with a list of names, you can use the (non-standard) `authoraddon` and `editoraddon` fields. The addon name will be printed after the corresponding name in the regular name list, using the `nameaddon` field format, but only if it is different.

Afferbeck Lauder [Alistair Morrison], *Let Stalk Strine* (Sydney, 1965).

Afferbeck Lauder [Alistair Morrison], *Let Stalk Strine* (Sydney, 1965).

```
@book{lauder1965lss,
  author = {Afferbeck Lauder},
  authoraddon = {Alistair Morrison},
  title = {Let Stalk Strine},
  location = {Sydney},
  date = {1965}}
```

NHR §18.2.2

Again, you can also use the syntax from biblatex-realauthor. If you specify the `author`, then `realauthor` is treated as an alias for `authoraddon`. The equivalent is true for `realeditor`.

2.3 Name variants

In cases where an author changes the name under which they publish (e.g. due to changes of marital status), both the *Oxford Guide to Style* and *New Hart's Rules* suggest putting the later form of the name first, followed by parentheses containing an equals sign and the earier form of the name.

To trigger this formatting, annotate the relevant name in `authoraddon` or `editoraddon` with the keyword `variant`.

```
\textcite{joukovsky1967gdd}
```

Joukovsky [89]

Joukovsky, F. (= Joukovsky-Micha, F.), 'La Guerre des dieux et des géants chez les poètes francais du XVI^{e} siècle (1500–1585)', *Bibliothèque d'Humanisme et Renaissance*, 29 (1967), 55–92.

```
@article{joukovsky1967gdd,
  author = {F. Joukovsky},
  authoraddon = {F. Joukovsky-Micha},
  authoraddon+an = {1=variant},
  title = {La Guerre des dieux et des géants chez les poètes francais du XVI\textsuperscript{e}
    siècle (1500--1585)},
  journaltitle = {Bibliothèque d'Humanisme et Renaissance},
  volume = {29},
  date = {1967},
  langid = {french},
  pages = {55-92}}
```

OGS §15.17.4

2.4 Author-translators and author-revisers

If the contribution of the translators or revisers is so great they could be joint authors, Oxford style is to print them immediately after the actual author. The motivation comes from textbooks like this one:

```
\textcite{kuehner.blass1890ef}
```

⚙ Kühner–Blass [91]

📖 Kühner, Raphael, rev. Blass, Friedrich, *Ausführliche grammatik der griechischen sprache*, i: *Elementar- und Formenlehre* (Hannover: Hahnsche Buchhandlung, 1890–2).

⚙ Kühner, Raphael, rev. Blass, Friedrich, *Ausführliche grammatik der griechischen sprache*, i: *Elementar- und Formenlehre* (Hannover: Hahnsche Buchhandlung, 1890–2).

```
@mvbook{kuehner.blass1890ef,
  author = {Raphael Kühner},
  editor = {Friedrich Blass},
  editor+an = {=jointauthor},
  editortype = {reviser},
  shortauthor = {Kühner--Blass},
  title = {Elementar- und Formenlehre},
  maintitle = {Ausführliche grammatik der griechischen sprache},
  volume = {1},
  location = {Hannover},
  publisher = {Hahnsche Buchhandlung},
  date = {1890/1892}}
```

💡 Annotate *either* the `editor` *or* `translator` field with the keyword `jointauthor` to promote the name to the joint author position (you cannot do it for both). Internally, what this does is move the names to the oxref-specific `jointauthor` field; you can use this and `jointauthortype` directly if you like, at the cost of portability to other styles. Note that you have to supply a suitable `shortauthor` value yourself; oxref does not calculate it for you.

2.5 Titular prefixes

Generally speaking, using titular prefixes like Revd, Dr, Mrs, Sir, and so on as part of an author's name is unnecessary, but there are occasions when removing them can cause problems, so with oxref you can supply them if you need to. I have not added special rules for recognizing such titles, so if you want to include one you have to label each part of the name explicitly, as in the following example (the keyword for the titular prefix is `title`).

📖 Mrs Henry Wood, *East Lynne*, 3 vols. (London, 1861).

⚙ Mrs Henry Wood, *East Lynne*, 3 vols. (London, 1861).

```
@mvbook{wood1861el,
  author = {title=Mrs, given=Henry, family=Wood},
  title = {East Lynne},
  volumes = {3},
  location = {London},
  date = {1861}}
```

NHR §18.2.2*

You can switch the display of titular prefixes on or off using the `usenametitles` option. This can be set globally or on a per-type or per-entry basis.

2.6 Works in foreign languages

If you used a foreign language work, you might want to recommend a good translation.

💡 Add the translation in `related`, and set `relatedtype` to `translationas`.

J. Tschichold, *Typographische Gestaltung* (Basle, 1955); Eng. trans. as *Asymmetric Typography* (London, 1967).

J. Tschichold, *Typographische Gestaltung* (Basle, 1955); Eng. trans. as *Asymmetric Typography* (London, 1967).

```
@book{tschichold1955tg,
  author = {J. Tschichold},
  title = {Typographische Gestaltung},
  location = {Basle},
  date = {1955},
  related = {tschichold1967tg},
  relatedtype = {translationas}}
@book{tschichold1967tg,
  title = {Asymmetric Typography},
  location = {London},
  date = {1967}}
```

NHR §18.2.5*

To specify the translator up front, set the `relatedtype` to `bytranslator` instead.

José Sarrau, *Tapas y aperitivos* (Madrid, 1975); trans. Francesca Piemonte Slesinger as *Tapas and Appetizers* (New York, 1987).

José Sarrau, *Tapas y aperitivos* (Madrid, 1975); trans. Francesca Piemonte Slesinger as *Tapas and Appetizers* (New York, 1987).

```
@book{sarrau1975ta,
  author = {José Sarrau},
  title = {Tapas y aperitivos},
  location = {Madrid},
  date = {1975},
  related = {sarrau1987ta},
  relatedtype = {bytranslator}}
@book{sarrau1987ta,
  author = {José Sarrau},
  translator = {Francesca Piemonte Slesinger},
  title = {Tapas and Appetizers},
  location = {New York},
  date = {1987}}
```

NHR §18.2.14

If you used the translation, you might want to give the original publication as well.

Add the original in `related`, and set `relatedtype` to `translationof`.

R. Metz, *A Hundred Years of British Philosophy*, ed. J. H. Muirhead, trans. J. W. Harvey (1938) [Ger. orig., *Die philosophischen Strömungen der Gegenwart in Grossbritannien* (1935)]

R. Metz, *A Hundred Years of British Philosophy*, ed. J. H. Muirhead, trans. J. W. Harvey (1938) [Ger. orig., *Die philosophischen Strömungen der Gegenwart in Grossbritannien* (1935)].

```
@book{metz1938hyb,
  author = {R. Metz},
  title = {A Hundred Years of British Philosophy},
  editor = {J. H. Muirhead},
  translator = {J. W. Harvey},
  date = {1938},
  related = {metz1935psg},
  relatedtype = {translationof}}
@book{metz1935psg,
  title = {Die philosophischen Strömungen der Gegenwart in Grossbritannien},
  date = {1935},
  language = {german}}
```

NHR §18.2.5

It is often helpful to provide an informative translation of foreign language titles.

Put the translation in `titleaddon`.

Nissan Motor Corporation, *Nissan Jidosha 30nen shi* [A 30-year history of Nissan Motors] (1965).

Nissan Motor Corporation, *Nissan Jidosha 30nen shi* [A 30-year history of Nissan Motors] (1965).

```
@book{nissan1965hnm,
  author = {{Nissan Motor Corporation}},
  title = {Nissan Jidosha 30nen shi},
  titleaddon = {A 30-year history of Nissan Motors},
  date = {1965}}
```

NHR §18.2.5

Conversely, it might be helpful to provide the English original of a translated title.

A. A. Milne, *Pu der Bär* [Ger. trans. of *Winnie the Pooh*] (Potsdam: Williams, 1938).

A. A. Milne, *Pu der Bär* [Ger. trans. of *Winnie the Pooh*] (Potsdam: Williams, 1938).

```
@book{milne1938pb,
  author = {A. A. Milne},
  title = {Pu der Bär},
  language = {german},
  origtitle = {Winnie the Pooh},
  location = {Potsdam},
  publisher = {Williams},
  date = {1938}}
```

OGS §15.2.1

2.7 Missing place of publication

For periodicals, grey literature, audiovisual and online material, the lack of a place of publication is not surprising; indeed it may be expected. For books, however, it may be remarkable and

deserve marking in the bibliography with ‘n.p.’ (for ‘no place’).

- To have oxref automatically insert ‘n.p.’ or the localized equivalent for books, collections, reference works, proceedings and similar entry types, use the `nolocation` bibliography option.
- To have oxref automatically insert ‘n.p.’ or the localized equivalent for only a specific entry, use the `nolocation` entry option instead. The advantage of doing this over simply giving ‘n.p.’ as the publisher is that it hides it from other styles that do not follow the same convention.

Marchetto of Padua, *Pomerium*, ed. Guiseppe Vecchi (n.p., 1961).

Marchetto of Padua, *Pomerium*, ed. Guiseppe Vecchi (n.p., 1961).

```
@book{padua1961p,
  author = {{Marchetto of Padua}},
  title = {Pomerium},
  editor = {Guiseppe Vecchi},
  date = {1961},
  options = {nolocation}}
```

NHR §18.2.9

2.8 Missing or inferred date of publication

If the date is missing from a work, you can sometimes make an educated guess what it should be. It is usual practice to enclose such guesses in square brackets.

- With oxref, you can achieve this by annotating the `date`, `origdate`, or `eventdate` field with the keyword `inferred`.

```
date+an = {=inferred},
```

3.1 Articles in periodicals with volumes/numbers

The *Oxford Guide to Style* consistently prefers volume and part numbers to be written like '23/2', but also discusses formats such as '23: 2' and '23 (2)'. *New Hart's Rules* adds '23, 2' as a further possibility. The latter two are better suited to oxalph/oxyear which use a colon to demarcate the page numbers. These variations are implemented as the option `issuestyle`; see section 1.1 for details.

If the last/only word of the journal title is abbreviated (indicated by point or capital letter), it does not need a comma after it. Oxref will try to detect this; if it gets it wrong, you can suppress the comma by adding `\nopunct` to the end of the journal (sub)title, or restore it by adding a pair of braces.

3.4 Works published as an issue

These examples illustrate where a book is also published as a whole issue of a periodical, and show how you may reference both at once. You can either add the periodical details to a book entry or add the book details to a periodical entry.

Author, *Title* = *JournalTitle*, Vol/Number (Location: Publisher, Year), pages.

Use `equals` as the `relatedtype`.

C. Bec (ed.), *Italie 1500–1550: Une situation de crise? = Annales de l'Université Jean Moulin*, 1975/2 (Langues étrangères, 2; Lyon, 1976), 99–109.

3.5 Articles in an issue that is a supplement to another issue

Author, 'Title', *JournalTitle*, Vol/Number (Year); Supplement to *MainJournalTitle* Vol/Number, Pages.

To get this format, use a separate entry for the parent issue, reference it in the `related` field, and use the key `suppto` as the `relatedtype`.

```

OGS §15.4.1

Use `bookpagination` to force the display of 'pp.' (since the number format is odd), and `\DeclareNumChars*{S}` to ensure that `S61` is recognized as a number.

3.6 Articles that span multiple issues

Use the key `serialarticle` as the `relatedtype`.

3.7 Accepted journal articles, pre-publication

Author, ‘Title’, to be published in *JournalTitle*, Year.

  pubstate = {inpress}}
```

3.8 Editorials and other regular features

Strictly speaking, when a work is headed ‘Editorial’ or ‘Letter to the Editor’ in a periodical, this is a descriptor rather than a title.

If a piece has a true title, the descriptor goes in the `note` field. If it doesn’t, the descriptor goes in the `title` field; annotate the field with the keyword `descriptor` to remove the quote marks. Alternatively, use the (non-standard) `descriptor` field for the descriptor in all cases, and oxref will take care of this for you.

3.9 Reviews

Author, ‘Title’, review of ReviewedWork, in *JournalTitle*, Vol/Number (Year), Pages.

To get this format, use a separate entry for the reviewed item, reference it in the ‘related’ field, and use the key ‘reviewof’ as the ‘relatedtype’.

4.1 Monographs

Biblatex defines book as a monograph, written either by a single author, or by several authors who have joint responsibility for the entire work. An editor in this context has a modest role selecting or annotating the content, and therefore in Oxford style is given after the title even if the author is not given.

OGS §15.2.1

4.2 Collections

Biblatex defines `collection` as a book made up of multiple self-contained contributions from distinct authors. There is no overall author: use the regular `book` entry type for collections of a single author's work. The editor in this case has a more active role and therefore comes before the title.

Editor (ed.), *Title* (Location: Publisher, Year).

Rosemary Stewart et al. (eds.), *Managing in Britain* (London, 1994).

  title = {Managing in {Britain}},
  location = {London},
  date = {1994}}
```

OGS §15.2.1

4.3 Reference works

Biblatex uses `reference` for encyclopaedias and dictionaries, which are typically made up of many small contributions by distinct authors and compiled by an editorial board whose membership might change between successive editions. From a database perspective, reference works are like collections in that they have no single author (a reference work written by a single author should use the book entry type instead).

The *Oxford Guide to Style* considers the titles of reference works to be more important and memorable than those of the editor, and so lists the title first, but *New Hart's Rules* doesn't. Oxref takes the former approach, but you can switch to the latter by setting the `useeditor` option back to true for this type.

```
\ExecuteBibliographyOptions[reference,mvreference]{useeditor=true}
```

Title, ed. Editor(s) (Location: Publisher, Year).

  series = {Philosophia Antiqua},

  location = {Leiden},
  date = {1991}}
```

OGS §15.2.1

4.4 Multi-volume works

Biblatex provides additional entry types for multi-volume works: `mvbook`, `mvcollection` and `mvreference` respectively. These can be used to cite all the volumes at once, or just one volume from the set.

4.4.1 All volumes

Where all volumes were published consistently, the following form is used:

> Author, *Title*, n vols. (Location: Publisher, Year), VolNo. Pages.

```
\parencite[ii.~\mkcomprange{367-
↪  368}]%
{straeten1867lmp}
```

    title = {La Musique aux Pays-Bas avant le XIX\textsuperscript{e} siècle},
    volumes = {8},
    location = {Brussels},
    date = {1867/1888}}
```

OGS §15.2.6

Where the publisher changed between volumes, the following form is used:

> Author, *Title*, VolNo, n vols. (Location: Publisher and Location: Publisher, Year–Year).

📖 Heinrich Ritter, *The History of Ancient Philosophy*, trans. Alexander J. W. Morrison, 4 vols. (Oxford: Talboys and London: Bohn, 1838–46).

⚙ Heinrich Ritter, *The History of Ancient Philosophy*, trans. Alexander J. W. Morrison, 4 vols. (Oxford: Talboys and London: Bohn, 1838–46).

```
@mvbook{ritter1838hap,
  author = {Heinrich Ritter},
  title = {The History of Ancient Philosophy},
  translator = {Alexander J. W. Morrison},
  volumes = {4},
  location = {Oxford and London},
  publisher = {Talboys and Bohn},
  date = {1838/1846}}
```

OGS §15.2.6*

ℹ In the *Oxford Style Manual*, the translator in the above reference is in parentheses; this occurs in one other reference (§15.2.2, Lawrence 1992), but in many more does not (§15.2.15, Bischoff 1990; §15.8, Auden 1990; all in §13.11.1). I am therefore choosing to ignore this unnecessary complication.

💡 You can alternatively use the standard biblatex relation type `multivolume`. Note that when you do so, the overall date is removed, so be sure that individual volume dates are provided.

In the *Oxford Guide to Style*, there is no comma after 'rev. edn.' in the above reference; this may be an error.

4.6.3 Republications

If the publication has not been revised, but has been re-typeset by a different publisher, the *Oxford Guide to Style* suggests putting the original date in a note at the end, rather than within the publication block.

> Author, *Title* (Location: Publisher, Year) (originally pub. Year).

This format is triggered if you specify an original date but do not specify the original publisher or location, nor the edition of the later publication.

In the following example, you will see the style uses 'originally published' instead of 'first published'. This is because 'originally' is more common among the available examples.

Bruno Bettelheim, *The Uses of Enchantment: The Meaning and Importance of Fairy Tales* (Harmondsworth: Penguin Books, 1988) (first pub. 1976).

5.3 Anthologies of independently published works

Biblatex provides the `bookinbook` entry type for citing a part of an anthology that has previously been published as a book in its own right. The main difference from `inbook` is how the original publication information is handled.

5.3.1 Later version more accessible

Use `origdate` to give the date of original publication.

5.4 Articles in yearbooks and works of reference

Yearbooks may be treated either as collections or periodicals; the distinction boils down to whether you want to print the location and publisher.

The *Oxford Guide to Style* suggests citing entries in dictionaries and encyclopaedias using a postnote like `[s.v. 'Tawdry']`, but for online works gives a format rather similar to yearbooks, that is, without ‘in’.

To omit the ‘in’ before the book title, either use the `inreference` entry type without specifying an editor, or use the `incollection` type with an `entrysubtype` of `yearbook`.

5.5 Supplementary works in books and collections

If the work is headed ‘Introduction’, ‘Foreword’, ‘Afterword’, or similar, this is technically a descriptor rather than a title.

If the work has a true title, the descriptor goes in the `note` field. If it doesn’t, the descriptor goes in the `title` field; annotate the field with the keyword `descriptor` to correct the formatting. Alternatively, use the (non-standard) `descriptor` field for the descriptor in all cases, and oxref will take care of this for you.

6.1 Single volume proceedings

The `proceedings` entry type is intended for a set of conference papers that have been collected together into a single volume.

> *Title*, ed. Editor (Location: Publisher, Year).

7.2 Reports with a type or series

The number of a report will only be printed if you also supply a type or series, or both. The difference between the two is that the series will be separated from the (type and) number by a comma, while only a space separates the type and number. In addition, if you supply a series but no type, the number will be prefixed by 'No.' or the localized equivalent.

Author, *Title*, Series, Type Number (Location: Institution, Year).

7.3 Jointly published reports

It is more common with reports than with books for a work to be branded jointly by several issuing organizations. Neither the *Oxford Guide to Style* nor *New Hart's Rules* give explicit guidance on this, but I suggest handling it by giving corresponding lists as the `location` and `institution`:

```
  location = {Place 1 and Place 2 and Place 3},
  institution = {Organization 1 and Organization 2 and Organization 3},
```

This will be printed as follows:

(Place 1: Organization 1, Place 2: Organization 2, and Place 3: Organization 3)

7.4 Theses

Author, 'Title', Type (Institution, Year).

```

OGS §15.5.1

The following forms are also supported; to use them, pass the `thesis` option:

- `thesis=in`

  > Author, ‘Title’ (Type, Institution, Year).

- `thesis=plain`

  > Author, ‘Title’, Type, Institution, Year.

7.5 Booklets, leaflets, and other formal but unpublished texts

7.6 Patents

There are no examples of patents in the *Oxford Guide to Style* or *New Hart’s Rules*. I welcome suggestions for how to make the generated references more Oxford-like.

Following the conventions from biblatex-chicago, use `origdate` for the date the patent was filed (or the application was published), and `date` for the date the patent was finally issued or published.

You can override the default date descriptions with the (non-standard) `origdatetype` and `datetype` fields.

7.7 Standards

There are no examples of technical standards in the *Oxford Guide to Style* or *New Hart's Rules*. I welcome suggestions for how to make the generated references more Oxford-like.

The particular quirk with standards entries is that the number is promoted to the head of the reference if an author is not specified (or `useauthor` is `false`). If this happens, the number is copied to `sortkey` so the entry appears in the right place in the reference list, unless you get there first with your own value of `sortkey`. You may want to do this if, for example, you want 'ISO 1000' to come after 'ISO 999'.

- You are encouraged to put the standards body in `organization`, but you can use `publisher` instead.
- The examples don't demonstrate it, but you can use the `version` field for the version of the standard.

Audiovisual materials

artwork, audio, inaudio, image, movie, music, inmusic, performance, video

There are typically many contributors to an audiovisual work, and the priority given to each role is fluid. Oxref uses `author` for contributors that should go at the head of the reference, and `editor` for others. As well as the normal ones you can use the author/editor types `performer`, `conductor`, `director` and `reader`.

8.1 Audio recordings

The basic structure of audio recording entries is as follows:

> Composer, *Title*, Artist, RecordingDate (RecordingCompany Type Number, PublicationDate) [Medium].

If the composer's name is not of interest, it may be omitted or replaced by the artist's name.

- Use `origdate` to specify the date of recording. If you want it to be introduced by something other than the localized string 'recorded', use the (non-standard) `origdatetype` field.

The *Oxford Guide to Style* offers several ways of expressing the recording company:

- a simple label name – e.g. 'Columbia', 'Hyperion', 'Archiv' – followed immediately by the type or number
- a label name separated from the number by a comma, e.g. 'Valois,' 'EMI Electrola,' 'EMI Blues Series,'
- a compiling organization, semicolon, publishing company, no comma, e.g. 'Smithsonian Institution; Columbia'
- a publishing company, colon, label name, comma, e.g. 'Decca Record Company, Ltd.: Éditions de l'Oiseau-lyre,'
- a publishing company, comma, location, comma, e.g. 'Christophorus-Verlag Herder, Freiburg im Breisgau,'

New Hart's Rules sticks firmly with the first of these, so oxref makes this the easiest choice but provides workarounds to allow you to achieve most of the others if you really need to.

- To get the normal format, put the label name in `publisher`, the type of release (e.g. compact disc, audio cassette) in `type`, and the catalogue number in `number`. In the examples from *New Hart's Rules*, the type is uniformly omitted.
- To put a comma between the label and the type/number, put the label name in `series` instead.

- If you provide both a `publisher` and a `series`, they will be separated by `\recordseriespunct`, which is initially set to `\addcomma\space`. You could set it to `\addcolon\space` instead to match the example.
- If the compiling organization is distinct from the publisher, put the former in `origpublisher`; it will be separated from the publisher by a semicolon.
- Contrary to the OGS example, but in common with other entry types, the location if provided will be printed before the publisher, separated from it by a colon. (This is why a comma is the default for `\recordseriespunct`.) In the absence of a publisher it will be followed by a comma.

8.1.1 Combination releases

Sometimes publishers will put several works on a single release without giving it an overall title.

Put the subsequent composer/title combinations in new entries, and relate them with a `relatedtype` of `includes`.

Henri Dutilleux, *L'Arbre des songes*, and Peter Maxwell Davies, *Concerto for Violin and Orchestra*, Royal Philharmonic Orchestra, cond. André Previn, violin Isaac Stern (CBS MK 42449, 1987).

Henri Dutilleux, *L'Arbre des songes*, and Peter Maxwell Davies, *Concerto for Violin and Orchestra*, Royal Philharmonic Orchestra, cond. André Previn, violin Isaac Stern (CBS MK 42449, 1987).

```

  date = {1987}}
@audio{maxwelldavies1987,
  author = {Maxwell Davies, Peter},
  title = {Concerto for Violin and Orchestra},
  date = {1987}}
```

NHR §18.7.2*

Only the primary work will show up in citations; the subsequent ones will not. If this is not what you want, you will need to use `shortauthor`/`shorttitle` or `shorthand`, or build up the citation manually with `\citeauthor` and the like.

Depending on the thrust of your document, you could remove the complication by shifting the composers into the title and putting the performers in the author position.

If you are only interested in one of the works in the release, you might be better off using the `inaudio` entry type instead (see below).

8.1.2 Tracks from an album

Use the non-standard entry types `inaudio` or `inmusic` to reference a single work within an album. Use `booktitle` (somewhat loosely) for the album title.

Miles Davis et al., 'So What', in *Kind of Blue*, rec. 1959 (Columbia CK 64935, 1997) [CD].

NHR §18.8.5

Use `origdate` and, if necessary, the (non-standard) `origdatetype` field to specify the date of recording or original broadcast. Use the (non-standard) `datetype` field to clarify the event represented by the publication date.

8.3 Broadcasts

The *Oxford Guide to Style* prints all information about the transmission, including the date, bare. *New Hart's Rules* tends to put the transmittion date in parentheses, perhaps because (*a*) broadcast is a type of publication, (*b*) episodes in some very long-running series are identified by date alone, and (*c*) it may be important to know which broadcast is referenced since the edits might be different. Oxref sides with the latter.

Title, Channel (Location, Date, Time).

'EpisodeTitle', *SeriesTitle*, Episode EpisodeNumber, Channel, Date.

If the episode has a true title, the episide descriptor (e.g. 'Episode 1') goes in the `note` field. If it doesn't, the episode descriptor goes in the `title` field; annotate the field with the keyword `descriptor` to remove the quote marks. Alternatively, use the (non-standard) `descriptor` field for the episode descriptor in all cases, and oxref will take care of this for you.

I am not sure why *New Hart's Rules* places the channel after the date in the above case; it is probably a mistake or an odd variation, so I have adjusted it for consistency.

- As for other online videos, set the `entrysubtype` to `clip` for a video podcast.

- The above is actually an episode of the audio podcast *60-Second Mind* (which would be the `maintitle`). *Scientific American* is in this instance the `organization` that is hosting it, but because it is also the name of a journal, it has been manually formatted to match.
- Perhaps a better way of achieiving consistency in this case would be to treat it like an article, and clarify the medium (i.e. video, erroneously) using the `titleaddon` field.
- Set the `entrysubtype` to `webcast` for a webcast.

8.6 Performances

- Use `origdate` for the date when the play, ballet, opera, or whatever was written or premièred, and `date` for the date of the performance you are referencing. You can specify what these dates signify with the (non-standard) `origdatetype` and `datetype` fields. You can also use `eventdate` in place of `date`, but then you won't be able to specify the type.
- As for recordings, you can use the `author` and `editor` fields to provide various credits. As for artworks, use `venue` and `location` for where the performance occurred, and `organization` for a website or organization hosting a recording of the performance online.

Digital media

online, software, dataset

In Section 18.8.5 of *New Hart's Rules*, some publication dates are printed in parentheses and some are left bare. In theory, the difference should be that parentheses indicate 'proper' publication (bare dates are when the resource was created or issued). In practice, it seems to be random. I have therefore decided to ignore the variation and leave all such dates in parentheses.

9.1 Website articles

Standard biblatex only provides for one title for online resources, which is fine for whole websites but not if you want to cite one page or article within a website.

- If the piece is unsigned, put the site name in the `author` field.

- If the piece is signed, put the site name in the `organization` field. The rationale is that biblatex uses this for the organization hosting the site, and it can get a bit blurry between that and the name of the site itself.

NHR §18.8.5

Unlike standard biblatex, oxref supports `maintitle` for online entries and prints the result in italics. For more portability, you could either hard-code the italics into the `organization` field or use the `article` entry type.

It is not made explicit why *Encyclopaedia Britannica* is in italics and *Wikipedia* is not. It might be historical or customary, because *Encyclopaedia Britannica* was established as a print publication and *Wikipedia* has only been online; it might be because *Encyclopaedia Britannica* is a Latin title; it might reflect an opinion on the two resources; or it may just be illustrative of variant practice.

NHR §18.8.5*

If it feels odd putting the entire content of a tweet in your reference, *New Hart's Rules* suggests using a descriptor like 'Twitter post' instead of the title. As described in Section 8.3, you can do this either by annotating the title field with the keyword `descriptor` or by using the (non-standard) `descriptor` field in place of `title`.

Legal references

commentary, jurisdiction, legal, legislation

Oxref provides only a basic level of support for legal references, in case you need to use some in a mainly non-legal text. For a more thorough and robust treatment, intended for a specialist readership, I recommend you use the oscola style instead.

Since there is a family resemblence between the *Oxford Guide to Style/New Hart's Rules* and the *Oxford Standard for the Citation of Legal Authorities*, oxref largely mimics oscola and its data model, though there are some small formatting differences. What you should *not* expect from oxref are facilities for compiling specialist indices of sources, or anything special regarding the handling of postnotes.

10.1 Cases

10.1.1 Reported cases

Use the `jurisdiction` entry type for citing cases.

- Use the `keyword` field to specify the jurisdiction. The following are recognized:
  - `gb` United Kingdom
  - `en`: England (default)
  - `cy`: Wales
  - `sc`: Scotland
  - `ni`: Northern Ireland
  - `eu`: European Union (including the EEC, EC, ECSC and EURATOM)
  - `echr`: Organs of the Council of Europe dealing with the European Convention on Human Rights
  - `int`: (Public) international law cases and materials
  - `us`: United States of America
  - `ca`: Canada
  - `aus`: Australia
  - `nz`: New Zealand
- Scottish cases heard at the House of Lords or the Supreme Court should technically be given the keyword `gb`, therefore you can also identify them with the `scottish-style` option.
- Use either the (non-standard) `reporter` or `journaltitle` field for the (abbreviated) name of the report series. Use the `series` field for a numeric sub-series.

- Several additional pagination types are defined for use with legal citations: `article`, `clause`, `regulation`, and `rule` all work as normal. The default is a bare number (`none`), indicating a page reference, though EU and ECHR cases default to using the 'para' (`paragraph`) prefix. There is also an alternative pagination type for paragraphs, `[]`, which prints the number in square brackets instead of giving it a prefix.
- If you want to include a parallel citation, you can use the non-standard `pardate`, `parreporter`, `parseries`, `parvolume`, and `parpages` fields.
- If you need to, use either the (non-standard) `court` or `institution` field for the court that decided the case.
- Use the `location` field for the location of the court in American, Australian or Canadian cases.

```

  title = {Ridge v. Baldwin},
  keywords = {gb},
  date = {1964},
  journaltitle = {A.C.},
  pages = {40}}
```

NHR §13.4.1

- Use the `year-essential` Boolean entry option to specify whether the year is essential for locating the report, in cases where automatic detection (based on the presence or otherwise of a volume number) fails. There is a similar `paryear-essential` option for the parallel year.

```

NHR §13.4.3

Both the *Oxford Guide to Style* and *New Hart's Rules* are inconsistent on whether the court of decision should be printed plain or in parentheses at the end of a reference to a reported case. The default chosen by oxref is to use parentheses as per the *Oxford Standard for the Citation of Legal Authorities*.

To print the court of decision plain, you can use the `court-plain` option. You can set this globally at the style level or on a per-entry basis.

10.1.3 European cases

- You can record the European Case Law Identifier for a case using the `ecli` field. The `ecli` option determines under what circumstances the identifier is printed.
- European cases still get sorted by title, even if the entry begins with the case number. Use `sorttitle` if you would rather they were sorted under 'Case' or 'Joined Cases'.
- The number will be classed as 'Joined Cases' if it contains a comma, a double hyphen (`--`), or the string `\oxrefand`, which defaults to '␣and␣'.
- For ECR cases, you can use either `number` or the non-standard `casenumber` field for the case number.

OGS §13.4.4

- Indicate Commission Decisions by putting `Commission` in the `institution` field. If a decision has a formal decision number, put this in the `number` field, and put the case number in the (non-standard) `casenumber` field or (oscola-supported) `userb` field. If wider portability is an issue, you can put the case number, including the word 'Case' if needed, in the `titleaddon` field instead.

10.2 Legislation

Use the `legislation` entry type for citing Acts, Bills, Orders, Measures, and the like.

10.2.1 UK legislation

Specify an `entrysubtype` of `primary` for primary legislation. This ensures only the title and year are printed.

Factory and Workshop Act 1891

10.2.2 European legislation

As with European cases, European legislation should be given the eu keyword. This is currently the only keyword that makes a difference to the formatting.

According to both the *Oxford Guide to Style* and *New Hart's Rules*, you can provide an even sparser reference for primary European legislation.

```

EC Treaty.

```
@legislation{ECT:Rome,
  entrysubtype = {eu-treaty},
  title = {EC Treaty},

  keywords = {eu}}

If this seems scandalously short, you may prefer to provide a full reference (including the relevant entry in the OJ or OJ Spec Ed) for the bibliography and use, say, `\citetitle` for citations.

Secondary legislation should always have a full reference.

10.3 Treaties

Treaties use the `legal` entry type, with `piltreaty` as the `entrysubtype`.

Don't use the `date` field for treaties; instead, use the `execution` field to give a list of dates. Each date should be given in the form ⟨*type*⟩=⟨*year-month-day*⟩, where ⟨*type*⟩ is one of `opened`, `signed`, `adopted`, or `inforce`. The dates won't be sorted; they will be printed in the order given.

10.4 Hansard

References to Hansard use the `legal` entry type, with `parliamentary` as the `entrysubtype`.

- For debates since 1909, give `Hansard` as the `title` and put either `HC` or `HL` in the `type` field.
- Put the column numbers in the `pages` field, and put `column` in the `bookpagination` field.

10.5 Legal reports

Reports of Parliamentary select committees and the Law Commission should be entered using the `report` entry type, with the `entrysubtype` set to `legal`.

To print the identifying codes within the publication block, put them all in `number`; do not specify a `type` or `series`.

10.6 Commentaries

Oxref does not provide any special formatting for legal commentaries; it provides the `commentary` entry type simply as an alias for `book`.

11.1 Poems

11.1.1 Short poems

Use the `incollection` entry type for a poem in a collection. If it appears in an article or a work that is itself in a collection, use the `misc` entry type for the poem, with a relation of type `in` pointing to the containing work.

11.1.2 Long poems

If a poem is divided into cantos, the title is set in italics rather than quoted.

- To achieve this, use the entry type `book` if the poem is published on its own, and `bookinbook` with entry subtype `poem` if the poem is published in an anthology.
- To assist with quoting passages, oxref provides the additional pagination types `book`, `canto`, and `stanza` (`line` is already defined), though in reality you are probably better off doing it by hand.

OGS §15.8*

11.2 Plays

Play titles, like those of epic poems, are set in italics rather than quoted.

- To achieve this, use the entry type `book` if the play is published on its own, and `bookinbook` with entry subtype `play` if the play is published in an anthology.
- To assist with quoting passages, oxref provides the additional pagination types `act` and `scene` (`line` is already defined), though in reality you are probably better off doing it by hand.

11.3 Manuscripts

> Author, 'Title'/Descriptor, Date, Archive, Location, Collection Series, Shelfmark, Folios.

With oxref, you can enter manuscripts in either of two ways. The first uses the `unpublished` entry type.

- If the manuscript has a descriptor but no title, put the descriptor in the `title` field and annotate the field with the term '`descriptor`'. If you want to supply both a title and a descriptor, put the descriptor in the `note` field. Alternatively, you can use the (oxref-specific) `descriptor` field, and oxref will handle all this for you.
- Use `author` and `date` as normal. Note that the `date` will not be printed if both the `author` and `title`/`descriptor` fields are left blank.
- Put the library or archive where the manuscript is kept in the `library` field, and the city or place name in the `location` field. Note that the `library` field is required to switch on the special support for manuscripts.
- Put the collection name in the `series` field and the shelfmark in the `number` field.
- Put the page range studied (or some other subdivision) in the `pages` field. You can use `\recto` and `\verso` for the respective sides of a folio, and you can also specify a `pagetotal`.
- You can use the `folio` key in the `pagination` and `bookpagination` fields.

```

NHR 18.6.3*

The second uses the dedicated `manuscript` entry type from biblatex-manuscripts-philology. Oxref does not have all the bells and whistles of that style, but it understands a subset of its data model.

- You can use `author`, `title`/`note`/`descriptor` and `date` as described above. (This is a departure from biblatex-manuscripts-philology.)
- Put the library or archive where the manuscript is kept in the `library` field, and the city or place name in the `location` field
- Put the collection name in the `collection` field and the shelfmark in the `shelfmark` field.
- If the date is vague (e.g. a century), you can put this in the `dating` field. Note that it will only be printed if the `date` is missing/not printed.
- Put the page range studied (or some other subdivision) in the `pages` field. You can use `\recto` and `\verso` for the respective sides of a folio, and you can also specify a `pagetotal`.
- You can specify the number of columns (either `1` or `2`) in the `columns` field.
- You can specify the layer of a palimpsest in the `layer` field. Use `inf` for the inferior layer and `sup` for the superior layer.
- You can specify the writing support material in the `support` field. Three special keys – `papyrus`, `paper`, and `pergament` – are recognized and (potentially) translated, but other values will be printed as-is.

11.4 Letters

These examples relate to letters held personally or online. For letters that form part of archival collections, see the section on manuscripts above.

Note that it is usually acceptable to exclude personal communications from the reference section, and simply cite them in the text (in which case you may not need the biblatex machinery).
