1 Introduction

The package `biblatex-trad` is a contribution to the great package `biblatex`.

It provides the implementation of the traditional bibliography styles (`plain`, `unsrt`, `alpha` and `abbrv`) as a style for `biblatex`.

1.1 Motivation

The package is motivated by a question at TEX – LATEXStack Exchange 'How to emulate the traditional BibTeX styles (`plain`, `abbrv`, `unsrt`, `alpha`) as closely as possible with `biblatex`?'

1.2 Requirements

The use of the styles requires the `biblatex` package. It is tested with the current version of `biblatex` (at the time of writing that is v3.16). Care has been taken to retain backwards compatibility with older versions, but please do not expect the styles to work flawlessly with ancient versions of `biblatex`. Note also that the style may fail silently with older versions, it need not necessarily emit noisy warnings or error messages, the output might just be wrong.

Note that in recent versions of `biblatex` the BibTeXbackend has been degraded to the status of 'fallback backend'. Some features of this style will only work properly if you use the default Biber backend.

1.3 License

Copyright © 2012–2015 Marco Daniel, 2016–2021 Moritz Wemheuer. Permission is granted to copy, distribute and/or modify this software under the terms of the LaTeX Project Public License, version 1.3c.[1]

1.4 Feedback

Please use the `biblatex-trad` project page on GitHub to report bugs and submit feature requests.[2]

If you do not want to report a bug or request a feature but are simply in need of assistance, you might want to consider posting your question on the `comp.text.tex` newsgroup or TeX – LaTeXStack Exchange.[3]

2 Usage

`biblatex-trad` is not a standalone package. As described in § 1 it is a small collection of styles. So you can load the styles as follows:

`\usepackage[style=`⟨*style*⟩`]{biblatex}`

The available styles are listed below.

trad-plain Implementation of the standard style `plain`

trad-unsrt Implementation of the standard style `unsrt`

trad-alpha Implementation of the standard style `alpha`

trad-abbrv Implementation of the standard style `abbrv`

After loading the style you can use all options provided by `biblatex`. That means also that all fields of the standard bibliography drivers are available, even if they are unknown to the traditional `.bst` files.

3 Limitations

Up to now the entry types `@article`, `@book`, `@incollection`, `@inproceedings`, `@online`, `@proceedings`, `@thesis`, `@report` and `@unpublished` are set up.

Since the styles are based on `biblatex` standard styles, the fields retain the meaning they have in `biblatex` even if that may be at odds with how the traditional `.bst` files handle those fields.

4 Revision History

0.5 2021-03-06

Synced with `biblatex` v3.16 (2020-12-31)

0.4a 2018-02-17

Fixed alphabetic labels for names with prefix ('von' part) (issue #34 on github)

0.4 2018-02-02

Fixed incorrect bibstring for chapters (issue #32 on github)

Various small modifications

0.3 2016-06-26

Fix issues with new name formats in `biblatex` versions $\geq$ 3.3 (issue #25 on github)

Fix problems with the related mechanism (issue #24 on github)

Proper support for `@thesis`-types (issue #23 on github)

Modify `maxalphanames`/`minalphanames` and `\labelalphaothers` in `trad-alpha` to mirror `alpha` more closely (issue #22 on github)

Use `labelprefix` instead of `prefixnumber`

0.2 2012-09-29

Fixed missing comma after journal name if journal name has a period

Make titles sentence case

Removed extra *in*

Removed extra `\printfield`

Fixed extra comma if `@article` doesn't have a year

Use package `libertine-type1` for documentation
