1 Required classes and packages

`\thesis@backend` The class requires the class specified in `\thesis@backend`, whose default value is `[a4paper]{rapport3}`. If a different base class is desired, it can be specified by redefining `\thesis@backend` prior to loading the fithesis4 class.

```
\ProvidesClass{fithesis4}[\thesis@version]
\ifx\thesis@backend\undefined
  \def\thesis@backend{[a4paper]{rapport3}}
\fi\expandafter\LoadClass\thesis@backend
```

The class also requires the following packages:

- keyval – Adds support for parsing comma-delimited lists of key-value pairs.
- etoolbox – Adds support for expanding code after the preamble using the `\AtPreamble` hook.
- ltxcmds – Implements several commands from the LaTeX kernel. Used for the `\ltx@ifpackageloaded` command, which – unlike its `\@ifpackageloaded` counterpart – can be used outside the preamble.
- ifxetex – Used to detect the XeTeX engine.
- ifluatex – Used to detect the LuaTeX engine.
- inputenc – Used to enable the input UTF-8 encoding. This package does not get loaded under the XeTeX and LuaTeX engines.
- xpatch – Used to redefine parts of code in macros without redefining the whole macro.

The hyperref package is also conditionally loaded during the expansion of the `\thesis@load` macro (see Section 2.4). Other packages may be required by the style files (see Section 3.5) you are using.

```
\RequirePackage{keyval}
\RequirePackage{etoolbox}
\RequirePackage{ltxcmds}
\RequirePackage{ifxetex}
\RequirePackage{ifluatex}
\ifxetex\else\ifluatex\else
  \RequirePackage[utf8]{inputenc}
\fi\fi
\RequirePackage{xpatch}
```

2 Public API

2.1 Options

Any `[`⟨*options*⟩`]` passed to the class will be handed down to the loaded style files. The supported options are therefore documented in the subsections of Section 3.5 dedicated to the respective style files.

The class options specify the *form* of the document.

2.2 The \thesissetup macro

\thesissetup The main public macro is the \thesissetup{⟨*keyvals*⟩} command, where *keyvals* is a comma-delimited list of *key=value* pairs as defined by the keyval package. This macro needs to be included prior to the beginning of a LaTeX document. When the macro is expanded, the *key=value* pairs are processed.

Contrary to the class options, the *key=value* pairs of the \thesissetup macro specify metainformation about the document.

```
\long\def\thesissetup#1{%
  \setkeys{thesis}{#1}}
```

2.2.1 The basePath key

\thesis@basepath The {⟨basePath=*path*⟩} pair sets the *path* containing the class files. The *path* is prepended to every other path (\thesis@logopath, \thesis@stylepath and \thesis@localepath) used by the class. If non-empty, the *path* gets normalized to *path*/. The normalized *path* is stored within the \thesis@basepath macro, whose implicit value is fithesis/.

```
\def\thesis@basepath{fithesis/}
\define@key{thesis}{basePath}{%
  \ifx\thesis@empty#1\thesis@empty
    \def\thesis@basepath{}%
  \else
    \def\thesis@basepath{#1/}%
  \fi}
```

\thesis@logopath

2.2.2 The logoPath key

The {⟨logoPath=*path*⟩} pair sets the *path* containing the logo files, which is used by the style files to load the university and faculty logos. The *path* is normalized using the \thesis@subdir macro and stored within the \thesis@logopath macro, whose implicit value is \thesis@basepath followed by logo/\thesis@university/. By default, this expands to fithesis/logo/mu/.

```
\def\thesis@logopath{\thesis@basepath logo/\thesis@university/}
\define@key{thesis}{logoPath}{%
  \def\thesis@logopath{\thesis@subdir#1%
    \empty\empty\empty\empty}}
```

\thesis@stylepath

2.2.3 The stylePath key

The {⟨stylePath=*path*⟩} pair sets the *path* containing the style files. The *path* is normalized using the \thesis@subdir macro and stored within the \thesis@stylepath macro, whose implicit value is \thesis@basepath style/. By default, this expands to fithesis/style/.

```
\def\thesis@stylepath{\thesis@basepath style/}
\define@key{thesis}{stylePath}{%
  \def\thesis@stylepath{\thesis@subdir#1%
    \empty\empty\empty\empty}}
```

\thesis@localepath

2.2.4 The localePath key

The {⟨localePath=*path*⟩} pair sets the *path* containing the locale files. The *path* is normalized using the \thesis@subdir macro and stored within the \thesis@localepath macro, whose implicit value is \thesis@basepath followed by locale/. By default, this expands to fithesis/locale/.

```
\def\thesis@localepath{\thesis@basepath locale/}
\define@key{thesis}{localePath}{%
  \def\thesis@localepath{\thesis@subdir#1%
    \empty\empty\empty\empty}}
```

\thesis@subdir The \thesis@subdir macro returns / unchanged, coerces ., .., */path*, ./*path* and ../*path* to ./, ../, */path/*, ./*path/* and ../*path/*, respectively, and prefixes any other *path* with \thesis@basepath.

```
\def\thesis@subdir#1#2#3#4\empty{%
  \ifx#1\empty%           <empty> -> <basepath>
    \thesis@basepath
  \else
    \if#1/%
      \ifx#2\empty%             / -> /
        /%
      \else%              /<path> -> /<path>/
        #1#2#3#4/%
      \fi
    \else
      \if#1.%
        \ifx#2\empty%           . -> ./
          ./%
        \else
          \if#2.%
            \ifx#3\empty%      .. -> ../
              ../%
            \else
              \if#3/%   ../<path> -> ../<path>/
                ../#4/%
              \else
                \thesis@basepath#1#2#3#4/%
              \fi
            \fi
          \else
            \if#2/%      ./<path> -> ./<path>/
              ./#3#4/%
            \else
              \thesis@basepath#1#2#3#4/%
            \fi
          \fi
        \fi
      \else
        \thesis@basepath#1#2#3#4/%
      \fi
    \fi
  \fi}
```

\thesis@def The \thesis@def[⟨*key*⟩]{⟨*name*⟩} macro defines the \thesis@*name* macro to ex-

pand to either «*key*», if specified, or to «*name*». The macro serves to provide placeholder strings for macros with no default value.

```
\newcommand{\thesis@def}[2][]{%
  \expandafter\def\csname thesis@#2\endcsname{%
    <<\ifx\thesis@empty#1\thesis@empty#2\else#1\fi>>}}
```

\thesis@declaration

2.2.5 The `declaration` key

The {⟨`declaration`=*text*⟩} pair sets the declaration *text* to be included into the document. The *text* is stored within the `\thesis@declaration` macro, whose implicit value is `\thesis@@{declaration}`.

```
\def\thesis@declaration{\thesis@@{declaration}}
\long\def\KV@thesis@declaration#1{%
  \long\def\thesis@declaration{#1}}
```

\ifthesis@woman

2.2.6 The `gender` key

The {⟨`gender`=*char*⟩} pair sets the author's gender to either a male, if *char* is the character `m`, or to a female. The gender can be tested using the `\ifthesis@woman` ... `\else` ... `\fi` conditional. The implicit gender is male.

```
\newif\ifthesis@woman\thesis@womanfalse
\define@key{thesis}{gender}{%
  \def\thesis@male{m}%
  \def\thesis@arg{#1}%
  \ifx\thesis@male\thesis@arg
    \thesis@womanfalse
  \else
    \thesis@womantrue
  \fi}
```

\thesis@author

2.2.7 The `author` key

The {⟨`author`=*name*⟩} pair sets the author's full name to *name*. The *name* is parsed
\thesis@parseAuthor using the `\thesis@parseAuthor` macro and stored within the following macros:

\thesis@author
- `\thesis@author` – The full name of the author.

\thesis@author@head
- `\thesis@author@head` – The first space-delimited part of the name. This corresponds to the author's first name.

\thesis@author@tail
- `\thesis@author@tail` – The full name without the first space-delimited part of the name. This corresponds to the author's surname.

\author The standard LaTeX `\author` macro also sets this key.

```
\def\thesis@parseAuthor#1{%
  \def\thesis@author{#1}%
  \def\thesis@author@head{\expandafter\expandafter\expandafter
    \@gobble\thesis@head#1 \relax}%
  \def\thesis@author@tail{\thesis@tail#1 \relax}}
\thesis@def{author}%
```

```
\thesis@def[author]{author@head}%
\thesis@def[author]{author@tail}%
\define@key{thesis}{author}{%
  \thesis@parseAuthor{#1}}
\let\author\thesis@parseAuthor
```

\thesis@id

2.2.8 The id key

The {⟨id=*identifier*⟩} pair sets the identifier of the thesis author to *identifier*. This usually corresponds to the unique identifier of the author within the information system of the given university.

```
\thesis@def{id}
\define@key{thesis}{id}{%
  \def\thesis@id{#1}}
```

\thesis@type

2.2.9 The type key

The {⟨type=*type*⟩} pair sets the type of the thesis to *type*. The following types of theses are recognized:

The thesis type	The value of *type*
Seminar paper	sem
Bachelor's thesis	bc
Master's thesis	mgr
Thesis proposal	prop
Doctoral thesis	d
Rigorous thesis	r

The *type* is stored within the \thesis@type macro, whose implicit value is bc. For the ease of testing of the thesis type via \ifx conditions within style and locale files, the \thesis@sempaper, \thesis@bachelors, \thesis@masters, \thesis@proposal, \thesis@doctoral and \thesis@rigorous macros containing the corresponding *type* values are available as a part of the private API.

\thesis@sempaper
\thesis@bachelors
\thesis@masters
\thesis@proposal
\thesis@doctoral
\thesis@rigorous

```
\def\thesis@sempaper{sem}
\def\thesis@bachelors{bc}
\def\thesis@masters{mgr}
\def\thesis@proposal{prop}
\def\thesis@doctoral{d}
\def\thesis@rigorous{r}
\let\thesis@type\thesis@bachelors
\define@key{thesis}{type}{%
  \def\thesis@type{#1}}
```

\thesis@university

2.2.10 The university key

The {⟨university=*identifier*⟩} pair sets the identifier of the university, at which the thesis is being written, to *identifier*. The *identifier* is stored within the \thesis@university macro, whose implicit value is mu. This value corresponds to the Masaryk University in Brno.

```
\def\thesis@university{mu}
\define@key{thesis}{university}{%
  \def\thesis@university{#1}}
```

\thesis@faculty

2.2.11 The `faculty` key

The {⟨`faculty`=*identifier*⟩} pair sets the faculty, at which the thesis is being written, to *domain*. The following faculty *identifier*s are recognized at the Masaryk University in Brno:

The faculty	The *domain* name
The Faculty of Informatics	`fi`
The Faculty of Science	`sci`
The Faculty of Law	`law`
The Faculty of Economics and Administration	`econ`
The Faculty of Social Studies	`fss`
The Faculty of Medicine	`med`
The Faculty of Education	`ped`
The Faculty of Arts	`phil`
The Faculty of Sports Studies	`fsps`
The Faculty of Pharmacy	`pharm`

The *identifier* is stored within the `\thesis@faculty` macro, whose implicit value is `fi`.

```
\def\thesis@faculty{fi}
\define@key{thesis}{faculty}{%
  \def\thesis@faculty{#1}}
```

\thesis@department

2.2.12 The `department` key

The {⟨`department`=*name*⟩} pair sets the name of the department, at which the thesis is being written, to *name*. Unlike the university and faculty identifiers, fithesis4 does not prescribe the format of the *name*; the style files may internally parse it, or typeset it as-is. The *name* is stored within the `\thesis@department` macro.

```
\thesis@def{department}
\define@key{thesis}{department}{%
  \def\thesis@department{#1}}
```

\thesis@departmentEn

2.2.13 The `departmentEn` key

The {⟨`departmentEn`=*name*⟩} pair sets the English name of the department, at which the thesis is being written, to *name*. The *name* is stored within the `\thesis@departmentEn` macro.

```
\thesis@def{departmentEn}
\define@key{thesis}{departmentEn}{%
  \def\thesis@departmentEn{#1}}
```

\thesis@programme

2.2.14 The `programme` key

The {⟨`programme`=*name*⟩} pair sets the name of the author's study programme to *name*. Unlike the university and faculty identifiers, the programme *name* is only used for typesetting and it should therefore be specified in plain language with optional TEX macros. The *name* is stored within the `\thesis@programme` macro.

```
\thesis@def{programme}
\define@key{thesis}{programme}{%
  \def\thesis@programme{#1}}
```

\thesis@programmeEn

2.2.15 The `programmeEn` key

The {⟨`programmeEn`=*name*⟩} pair sets the English name of the author's study programme to *name*. The *name* is stored within the `\thesis@programmeEn` macro.

```
\thesis@def{programmeEn}
\define@key{thesis}{programmeEn}{%
  \def\thesis@programmeEn{#1}}
```

\thesis@field

2.2.16 The `field` key

The {⟨`field`=*name*⟩} pair sets the name of the author's field of study to *name*. Unlike the university and faculty identifiers, the *name* of the field of study is only used for typesetting and it should therefore be specified in plain language with optional TEX macros. The *name* is stored within the `\thesis@field` macro.

```
\thesis@def{field}
\define@key{thesis}{field}{%
  \def\thesis@field{#1}}
```

\thesis@fieldEn

2.2.17 The `fieldEn` key

The {⟨`fieldEn`=*name*⟩} pair sets the English name of the author's field of stufy to *name*. The *name* is stored within the `\thesis@fieldEn` macro.

```
\thesis@def{fieldEn}
\define@key{thesis}{fieldEn}{%
  \def\thesis@fieldEn{#1}}
```

\thesis@universityLogo

2.2.18 The `universityLogo` key

The {⟨`universityLogo`=*filename*⟩} pair sets the filename of the logo file to be used as the university logo to *filename*. The *filename* is stored within the `\thesis@universityLogo` macro, whose implicit value is `fithesis-base-\thesis@locale`. The `fithesis-` prefix serves to prevent package clashes with other similarly named files within the TEX directory structure. The logo file is loaded from the `\thesis@logopath\thesis@universityLogo` path.

```
\def\thesis@universityLogo{fithesis-base-\thesis@locale}
\define@key{thesis}{universityLogo}{%
  \def\thesis@universityLogo{#1}}
```

\thesis@facultyLogo

2.2.19 The facultyLogo key

The {⟨facultyLogo=*filename*⟩} pair sets the filename of the logo file to be used as the faculty logo to *filename*. The *filename* is stored within the \thesis@facultyLogo macro, whose implicit value is fithesis-\thesis@faculty-\thesis@locale. The fithesis- prefix serves to prevent package clashes with other similarly named files within the TEX directory structure. The logo file is loaded from the \thesis@logopath\thesis@facultyLogo path.

```
\def\thesis@facultyLogo{fithesis-\thesis@faculty-\thesis@locale}
\define@key{thesis}{facultyLogo}{%
  \def\thesis@facultyLogo{#1}}
```

\thesis@style

2.2.20 The style key

The {⟨style=*filename*⟩} pair sets the filename of the style file to be used to *filename*. The *filename* is stored within the \thesis@style macro, whose implicit value is \thesis@university/fithesis-\thesis@university-\thesis@faculty. When the *filename* is an empty token string, no style files will be loaded during the main routine (see Section 2.4).

```
\def\thesis@style{\thesis@university/fithesis-\thesis@university-\thesis@faculty}
\define@key{thesis}{style}{%
  \def\thesis@style{#1}}
```

\thesis@style@inheritance

2.2.21 The styleInheritance key

The {⟨styleInheritance=*bool*⟩} pair either enables, if *bool* is true or unspecified, or disables the inheritance for style files. The setting affects the function of the \thesis@requireStyle macro (see Section 3.1) and can be tested using the \ifthesis@style@inheritance ... \else ... \fi conditional. Inheritance is enabled for style files by default.

```
\newif\ifthesis@style@inheritance\thesis@style@inheritancetrue
\define@key{thesis}{styleInheritance}[true]{%
  \begingroup
  \def\@true{true}%
  \def\@arg{#1}%
  \ifx\@true\@arg
    \endgroup\thesis@style@inheritancetrue
  \else
    \endgroup\thesis@style@inheritancefalse
  \fi}
```

\thesis@locale

2.2.22 The locale key

The {⟨locale=*name*⟩} pair sets the name of the main locale to *name*. The *name* is stored within the \thesis@locale macro, whose implicit value is the main language of either the babel or the polyglossia package, or english, when undefined. When the *name* is an empty token string, no locale files will be loaded during the main routine (see Section 2.4).

```
\def\thesis@locale{%
```

```
  % Babel / polyglossia detection
  \ifx\languagename\undefined
  english\else\languagename\fi}
\define@key{thesis}{locale}{%
  \def\thesis@locale{#1}}
```

\ifthesis@english The English locale is special. Several parts of the document will typically be typeset in both the current locale and English. However, if the current locale is English, this would result in duplicity. To avoid this, the `\ifthesis@english` ... `\else` ... `\fi` conditional is made available for testing, whether or not the current locale is English.

```
\def\ifthesis@english{
  \expandafter\def\expandafter\@english\expandafter{\string
  \english}%
  \expandafter\expandafter\expandafter\def\expandafter
  \expandafter\expandafter\@locale\expandafter\expandafter
  \expandafter{\expandafter\string\csname\thesis@locale\endcsname}%
  \expandafter\csname\expandafter i\expandafter f\ifx\@locale
  \@english
    true%
  \else
    false%
  \fi\endcsname}
```

\thesis@locale@inheritance

2.2.23 The `localeInheritance` key

The {⟨`localeInheritance`=*bool*⟩} pair either enables, if *bool* is `true` or unspecified, or disables the inheritance. The setting affects the function of the `\thesis@requireLocale` macro (see Section 3.1) and can be tested using the `\ifthesis@locale@inheritance` ... `\else` ... `\fi` conditional. Inheritance is enabled for locale files by default.

```
\newif\ifthesis@locale@inheritance\thesis@locale@inheritancetrue
\define@key{thesis}{localeInheritance}[true]{%
  \begingroup
  \def\@true{true}%
  \def\@arg{#1}%
  \ifx\@true\@arg
    \endgroup\thesis@locale@inheritancetrue
  \else
    \endgroup\thesis@locale@inheritancefalse
  \fi}
```

2.2.24 The `date` key

The {⟨`date`=*date*⟩} pair sets the date of the thesis submission to *date*, where *date* is a string in the `YYYY/MM/DD` format, where `YYYY` stands for full year, `MM` stands for month and `DD` stands for day. The *date* is parsed and stored using the `\thesis@parseDate` macro within the following macros:

\thesis@parseDate
\thesis@date
\thesis@year
\thesis@month
\thesis@day

- `\thesis@date` – The entire *date*
- `\thesis@month` – The `MM` of *date*
- `\thesis@year` – The `YYYY` of *date*
- `\thesis@day` – The `DD` of *date*

`\thesis@season`

- `\thesis@season` – Expands to either:
  - `spring` if $2 < \texttt{MM} < 9$,
  - `fall` if $\texttt{MM} \leq 2$ or $\texttt{MM} \geq 9$.

`\thesis@seasonYear`

- `\thesis@seasonYear` – The year of the given semester:
  - $\texttt{YYYY} - 1$ if $\texttt{MM} \leq 2$.
  - `YYYY` if $\texttt{MM} > 2$

`\thesis@academicYear`

- `\thesis@academicYear` – The academic year of the given semester:
  - $\texttt{YYYY} - 1/\texttt{YYYY}$ if $\texttt{MM} < 9$.
  - $\texttt{YYYY/YYYY} + 1$ if $\texttt{MM} \geq 9$

To set up the default values, the `\thesis@parseDate` macro is called with the fully expanded `\the\year/\the\month/\the\day` string, which equals the current date.

```
\def\thesis@parseDate#1/#2/#3|{{

\thesis@place

2.2.25 The `place` key

The {⟨`place`=*place*⟩} pair sets the location of the faculty, at which the thesis is being prepared, to *place*. The *place* is stored within the `\thesis@place` macro, whose implicit value is `Brno`.

```
\def\thesis@place{Brno}
\define@key{thesis}{place}{%
  \def\thesis@place{#1}}
```

\thesis@title

2.2.26 The `title` key

The {⟨`title`=*title*⟩} pair sets the title of the thesis to *title*. The *title* is stored within

```
\thesis@def{title}
\define@key{thesis}{title}{%
  \def\thesis@title{#1}}
\def\title#1{\def\thesis@title{#1}}
```

\maketitle The standard LaTeX `\maketitle` macro is defined, but disabled.

```
\let\maketitle\relax
```

\thesis@TeXtitle

2.2.27 The `TeXtitle` key

The {⟨`TeXtitle`=*title*⟩} pair sets the TeX title of the thesis to *title*. The *title* is used, when typesetting the title, whereas `\thesis@title` is a plain text, which gets included in the PDF header of the resulting document. The *title* is stored within the `\thesis@TeXtitle` macro, whose implicit value is `\thesis@title`.

```
\def\thesis@TeXtitle{\thesis@title}
\define@key{thesis}{TeXtitle}{%
  \def\thesis@TeXtitle{#1}}
```

\thesis@titleEn

2.2.28 The `titleEn` key

The {⟨`titleEn`=*title*⟩} pair sets the English title of the thesis to *title*. The *title* is stored within the `\thesis@titleEn` macro.

```
\thesis@def{titleEn}
\define@key{thesis}{titleEn}{%
  \def\thesis@titleEn{#1}}
```

\thesis@TeXtitleEn

2.2.29 The TeXtitleEn key

The {⟨TeXtitleEn=*title*⟩} pair sets the English TEX title of the thesis to *title*. The *title* is used, when typesetting the title, whereas \thesis@titleEn is a plain text, which gets included in the PDF header of the resulting document. The *title* is stored within the \thesis@TeXtitleEn macro, whose implicit value is \thesis@titleEn.

```
\def\thesis@TeXtitleEn{\thesis@titleEn}
\define@key{thesis}{TeXtitleEn}{%
  \def\thesis@TeXtitleEn{#1}}
```

\thesis@keywords

2.2.30 The keywords key

The {⟨keywords=*list*⟩} pair sets the keywords of the thesis to the comma-delimited *list*. The *list* is stored within the \thesis@keywords macro.

```
\thesis@def{keywords}
\define@key{thesis}{keywords}{%
  \def\thesis@keywords{#1}}
```

\thesis@TeXkeywords

2.2.31 The TeXkeywords key

The {⟨TeXkeywords=*list*⟩} pair sets the TEX keywords of the thesis to the comma-delimited *list*. The *list* is used, when typesetting the keywords, whereas \thesis@keywords is a plain text, which gets included in the PDF header of the resulting document. The *list* is stored within the \thesis@TeXkeywords macro.

```
\def\thesis@TeXkeywords{\thesis@keywords}
\define@key{thesis}{TeXkeywords}{%
  \def\thesis@TeXkeywords{#1}}
```

\thesis@keywordsEn

2.2.32 The keywordsEn key

The {⟨keywordsEn=*list*⟩} pair sets the English keywords of the thesis to the comma-delimited *list*. The *list* is stored within the \thesis@keywordsEn macro.

```
\thesis@def{keywordsEn}
\define@key{thesis}{keywordsEn}{%
  \def\thesis@keywordsEn{#1}}
```

\thesis@TeXkeywordsEn

2.2.33 The TeXkeywordsEn key

The {⟨TeXkeywordsEn=*list*⟩} pair sets the English TEX keywords of the thesis to the comma-delimited *list*. The *list* is used, when typesetting the keywords, whereas \thesis@keywordsEn is a plain text, which gets included in the PDF header of the resulting document. The *list* is stored within the \thesis@TeXkeywordsEn macro.

```
\def\thesis@TeXkeywordsEn{\thesis@keywordsEn}
\define@key{thesis}{TeXkeywordsEn}{%
  \def\thesis@TeXkeywordsEn{#1}}
```

\thesis@abstract

2.2.34 The `abstract` key

The {⟨`abstract`=*text*⟩} pair sets the abstract of the thesis to *text*. The *text* is stored within the `\thesis@abstract` macro.

```
\thesis@def{abstract}
\long\def\KV@thesis@abstract#1{%
  \long\def\thesis@abstract{#1}}
```

\thesis@abstractEn

2.2.35 The `abstractEn` key

The {⟨`abstractEn`=*text*⟩} pair sets the English abstract of the thesis to *text*. The *text* is stored within the `\thesis@abstractEn` macro.

```
\thesis@def{abstractEn}
\long\def\KV@thesis@abstractEn#1{%
  \long\def\thesis@abstractEn{#1}}
```

\thesis@advisor

2.2.36 The `advisor` key

The {⟨`advisor`=*name*⟩} pair sets the thesis advisor's full name to *name*. The *name* is stored within the `\thesis@advisor` macro.

```
\thesis@def{advisor}
\define@key{thesis}{advisor}{\def\thesis@advisor{#1}}
```

\thesis@thanks

2.2.37 The `thanks` key

The {⟨`thanks`=*text*⟩} pair sets the acknowledgements text to *text*. The *text* is stored within the `\thesis@thanks` macro.

```
\long\def\KV@thesis@thanks#1{%
  \long\def\thesis@thanks{#1}}
```

\thesis@assignmentFiles

2.2.38 The `assignment` key

The {⟨`assignment`=*list*⟩} pair sets the comma-delimited list of paths to the PDF files containing the thesis assignment to *list*. The *list* is stored within the `\thesis@assignmentFiles` macro.

```
\define@key{thesis}{assignment}{%
  \def\thesis@assignmentFiles{#1}}
```

When the `\thesis@assignmentFiles` macro is defined and non-empty, the style files should take that as a cue that the user wishes to typeset the thesis assignment.

\thesis@bibFiles

2.2.39 The `bib` key

The {⟨`bib`=*list*⟩} pair sets the comma-delimited list of paths to the BIB files containing the bibliography databases to *list*. The *list* is stored within the `\thesis@bibFiles` macro.

```
\define@key{thesis}{bib}{%
  \def\thesis@bibFiles{#1}}
```

When the \thesis@bibFiles macro is defined and non-empty, the style files should take that as a cue that the user wishes to typeset the bibliography.

\ifthesis@auto

2.2.40 The autoLayout key

The {⟨autoLayout=*bool*⟩} pair either enables, if *bool* is true or unspecified, or disables autolayout. Autolayout injects the \thesis@preamble and \thesis@postamble macros at the beginning and at the end of the document, respectively. The setting can be tested using the \ifthesis@auto ...\else ...\fi conditional. The autolayout is enabled by default.

```
\newif\ifthesis@auto\thesis@autotrue
\define@key{thesis}{autoLayout}[true]{%
  \def\@true{true}%
  \def\@arg{#1}%
  \ifx\@true\@arg
    \thesis@autotrue
  \else
    \thesis@autofalse
  \fi}
```

\thesis@pages@preamble The \thesis@pages@preamble macro contains the last page number within the preamble of the document. During the first TEX compilation, the macro expands to ??.

```
\ifx\thesis@pages@preamble\undefined
  \def\thesis@pages@preamble{??}\fi
```

\thesis@pages@postamble The \thesis@pages@postamble macro contains the last page number prior to the postamble of the document. During the first TEX compilation, the macro expands to ??.

```
\ifx\thesis@pages@postamble\undefined
  \def\thesis@pages@postamble{??}\fi
```

\thesis@preamble \thesis@postamble \thesis@blocks@preamble \thesis@blocks@postamble The \thesis@preamble and \thesis@postamble macros temporarily switch to the hyphenation patterns and the csquotes style of the main locale and typeset the contents of the \thesis@blocks@preamble or \thesis@blocks@postamble macros, respectively; the latter two macros are to be redefined by the loaded style files.

After expanding \thesis@blocks@preamble inside a TEX group, the \thesis@preamble macro defines the \thesis@pages@preamble macro, writes the definition to the auxiliary file, and clears the page. After leaving the group, the \thesis@preamble sets up the style of the main matter by expanding the \thesis@blocks@mainMatter macro.

\thesis@blocks@mainMatter

```
\def\thesis@preamble{%
  {\thesis@selectLocale{\thesis@locale}%
  \thesis@blocks@preamble
  \gdef\thesis@pages@preamble{\thepage}
  \write\@auxout{\noexpand\gdef\noexpand
    \thesis@pages@preamble{\thepage}}
  \clearpage}
  \thesis@blocks@mainMatter}

\let\thesis@blocks@preamble\relax
\let\thesis@blocks@mainMatter\relax
```

Before expanding `\thesis@blocks@postamble` inside a TEX group, the `\thesis@postamble` macro defines the `\thesis@pages@postamble` macro, writes the definition to the auxiliary file, and clears the page.

```
\def\thesis@postamble{%
  \gdef\thesis@pages@postamble{\thepage}
  \immediate\write\@auxout{\noexpand\gdef\noexpand
    \thesis@pages@postamble{\thepage}}
  {\thesis@selectLocale{\thesis@locale}%
  \thesis@blocks@postamble}}

\let\thesis@blocks@postamble\relax
```

2.2.41 The `extra` key

The {⟨`extra`={⟨*keyvals*⟩}⟩} pair enables the definition of extra data fields, where *keyvals* is a comma-delimited list of *key*=*value* pairs as defined by the `keyval` package. For each *key*=*value* pair, a `\thesis@extra@`*key* is defined to be *value*. These extra data fields are provided as a unified interface for passing additional data to the style and locale files.

```
\def\thesis@extra@KV@prefix{KV@thesis@extra@}

`\thesis@def@extra` The `\thesis@def@extra[`⟨*definition*⟩`]{`⟨*name*⟩`}` macro defines the `\thesis@extra@`*name* macro to expand to either *definition*, if specified, or to `\thesis@placeholder@extra@`*name*,

where \thesis@placeholder@extra@*name* is defined to expand to «extra@*name*». If \thesis@extra@*name* has already been defined by the user, \thesis@def@extra has no effect.

```
\newcommand{\thesis@def@extra}[2][]{%
  \expandafter\ifx\csname thesis@extra@#2\endcsname\relax
    \def\thesis@placeholder@extra{<<extra@#2>>}%

2.3 The \thesislong macro

\thesislong The public macro \thesislong{⟨*key*⟩}{⟨*value*⟩}, can be used as an alternative to the \thesissetup{⟨*key*⟩ = {⟨*value*⟩}} public macro:

```
\long\def\thesislong#1#2{%
  \csname KV@thesis@#1\endcsname{#2}}
```

This macro is a relict of the time when \thesissetup did not accept multi-paragraph input.

2.4 The \thesisload macro

\thesisload The \thesisload macro is responsible for preparing the environment for, and consequently loading, the necessary locale and style files. By default, the \thesisload macro gets expanded at the end of the preamble, but it can be expanded manually
\ifthesis@loaded prior to that point, if necessary to prevent package clashes. The \ifthesis@loaded macro ensures that the expansion is only performed once. For backwards compati-
\thesis@load bility, the \thesis@load macro can be used to the same effect.

```
\newif\ifthesis@loaded\thesis@loadedfalse
\BeforeBeginEnvironment{document}{\thesisload}
\def\thesis@load{\thesisload}
\def\thesisload{%
  \ifthesis@loaded\else
    \thesis@loadedtrue
    \makeatletter
```

First, the name of the main locale file is fully expanded and loaded using the \thesis@requireLocale macro. If the user specified an explicit empty string as the value of \thesis@locale, do nothing.

```
      \ifx\thesis@locale\empty\else
        \edef\thesis@locale{\thesis@locale}
        \thesis@requireLocale{\thesis@locale}
      \fi
```

Coerce LuaTEX into defining \l@*locale* for *locale*s with known hyphenation patterns, unless babel or polyglossia have been loaded. In that case, \l@*locale* has already been defined.

```
    \ifluatex
      \ltx@ifpackageloaded{babel}{}{
        \ltx@ifpackageloaded{polyglossia}{}{
          \thesis@require{babel}}}
    \fi
```

Fix the value of the `\ifthesis@english` macro.

```
\ifthesis@english
  \expandafter\expandafter\expandafter\let\expandafter\expandafter
    \csname ifthesis@english\endcsname\csname iftrue\endcsname
\else
  \expandafter\expandafter\expandafter\let\expandafter\expandafter
    \csname ifthesis@english\endcsname\csname iffalse\endcsname
\fi
```

Consequently, the style files are loaded. If the user specified an explicit empty string as the value of `\thesis@style`, do nothing.

```
      \ifx\thesis@style\empty\else
        \thesis@requireStyle{\thesis@style}
      \fi
```

If the babel or polyglossia locale is identical to the thesis locale, the `\thesis@selectLocale` macro will be used to globally set up the csquotes style appropriate for the given locale.

```
    \ifx\languagename\empty\else
      \begingroup
      \edef\@doclocale{\languagename}%
      \ifx\@doclocale\thesis@locale
        \endgroup
        \AtBeginDocument{%
          \thesis@selectLocale{\thesis@locale}}%
      \else
        \endgroup
      \fi
    \fi
```

With the placeholder strings loaded from the locale files, we can now inject metadata into the resulting PDF file. To this end, the hyperref package is conditionally included with the `unicode` option. Consequently, the following values are assigned to the PDF headers:

- `Title` is set to `\thesis@title`.
- `Author` is set to `\thesis@author`.
- `Keywords` is set to `\thesis@keywords`.
- `Creator` is set to `2022/08/17 v1.1.0 fithesis4 MU thesis class`.

```
      \thesis@require{hyperref}
      \hypersetup{
        unicode=true,
        pdfencoding=auto,
        pdftitle=\thesis@title,
        pdfauthor=\thesis@author,
        pdfkeywords=\thesis@keywords,
        pdfcreator=\thesis@version}
```

If autolayout is enabled, the \thesis@preamble and \thesis@postamble macros are scheduled for expansion at the beginning and at the end of the document, respectively. The definition of the \thesis@pages macro is also scheduled to be written to the auxiliary file at the end of the document.

```
    \ifthesis@auto
      \AtBeginDocument{\thesis@preamble}
      \AtEndDocument{%
        \thesis@postamble
        \immediate\write\@auxout{%
          \noexpand\gdef\noexpand\thesis@pages{\thepage}}}
    \else
      \AtEndDocument{%
        \immediate\write\@auxout{%
          \noexpand\gdef\noexpand\thesis@pages{\thepage}}}
    \fi
  \makeatother
\fi}
```

3 Private API

3.1 File manipulation macros

\thesis@exists The \thesis@exists{⟨*file*⟩}{⟨*tokens*⟩} macro is used to test for the existence of a given *file*. If the *file* exists, the macro expands to *tokens*. Otherwise, a class warning is written to the output.

```
\def\thesis@exists#1#2{%
  \IfFileExists{#1}{#2}{%
  \ClassWarning{fithesis4}{File #1 doesn't exist}}}
```

\thesis@input The \thesis@input{⟨*file*⟩} macro inputs the given *file*, if it exists.

```
\def\thesis@input#1{%
  \thesis@exists{#1}{\input{#1}}}
```

\thesis@require The \thesis@require[⟨*options*⟩]{⟨*package*⟩} expands to \RequirePackage[⟨*options*⟩]{⟨*package*⟩}, if the specified *package* has not yet been loaded.

```
\newcommand\thesis@require[2][]{%
  \@ifpackageloaded{#2}{}{\RequirePackage[#1]{#2}}}
```

\thesis@requireIfExists The \thesis@requireIfExists[⟨*options*⟩]{⟨*package*⟩} expands to \thesis@require[⟨*options*⟩]{⟨*package*⟩} if the specified *package* exists and has not yet been loaded.

```
\newcommand\thesis@requireIfExists[2][]{%
  \thesis@exists{#2.sty}{\thesis@require[#1]{#2}}}
```

\thesis@requireStyle If inheritance is enabled for style files, then the \thesis@requireStyle{⟨*style*⟩} macro sequentially loads each of the following files, provided they exist:

1. \thesis@stylepath fithesis-base.sty
2. \thesis@stylepath\thesis@university/fithesis-\thesis@university-base.sty
3. \thesis@stylepath *style*.sty

If inheritance is disabled for style files, then only the last listed file is loaded. The `fithesis-` prefix serves to prevent package clashes with other similarly named package files within the TEX directory structure.

```
\def\thesis@requireStyle#1{%
  \ifthesis@style@inheritance
    \thesis@requireIfExists{\thesis@stylepath fithesis-base}%
    \thesis@requireIfExists{\thesis@stylepath\thesis@university
      /fithesis-\thesis@university-base}
  \fi
  \thesis@requireIfExists{\thesis@stylepath#1}}
```

`\thesis@requireLocale` If inheritance is enabled for style files, then the `\thesis@requireLocale{`⟨*locale*⟩`}` macro sequentially loads each of the following locale files, provided they exist:

1. `\thesis@localepath fithesis-`*locale*`.def`
2. `\thesis@localepath\thesis@university/fithesis-`*locale*`.def`
3. `\thesis@localepath\thesis@university/\thesis@faculty/fithesis-`*locale*`.def`

If inheritance is disabled for locale files, then only the first listed file is loaded. The `fithesis-` prefix serves to prevent clashes with other similarly named files within the TEX directory structure. To prevent undesirable side effects from locale files being loaded multiple times, the `\thesis@`*locale*`@required` macro is defined as a flag, which prevents future invocations with the same *locale*. The macro can be used within both locale and style files, although the usage within locale files is strongly discouraged to prevent circular dependencies.

If the polyglossia package is being used, its definitions for the respective locale get loaded as well. As a consequence, this command may not be used within the document, but only in the preamble.

```
\def\thesis@requireLocale#1{%
  % Ignore redundant requests
  \expandafter\ifx\csname thesis@#1@required\endcsname\relax
    \expandafter\def\csname thesis@#1@required\endcsname{}%
    \@ifpackageloaded{polyglossia}{\setotherlanguage{#1}}{}
    \thesis@input{\thesis@localepath fithesis-#1.def}%
    \ifthesis@locale@inheritance
      \thesis@input{\thesis@localepath\thesis@university/%
        fithesis-#1.def}%
      \thesis@input{\thesis@localepath\thesis@university/%
        \thesis@faculty/fithesis-#1.def}%
    \fi
  \fi}
```

3.2 String manipulation macros

`\thesis@` The `\thesis@{`⟨*name*⟩`}` macro expands to `\thesis@`*name*, where *name* gets fully expanded and can therefore contain active characters and command sequences.

```
\def\thesis@#1{\csname thesis@#1\endcsname}
```

`\thesis@@` The `\thesis@@{`⟨*name*⟩`}` macro expands to `\thesis@`*locale*`@`*name*, where *locale* corresponds to the name of the current locale. The *name* gets fully expanded and can therefore contain active characters and command sequences.

```
\def\thesis@@#1{\thesis@{\thesis@locale @#1}}
```

`\thesis@lower` `\thesis@upper` The `\thesis@lower` and `\thesis@upper` macros are used for upper- and lowercasing within locale files. To cast the `\thesis@`*name* macro to the lower- or uppercase, `\thesis@lower{`*name*`}` or `\thesis@upper{`*name*`}` would be used, respectively. The *name* gets fully expanded and can therefore contain active characters and command sequences.

```
\def\thesis@lower#1{{%
  \let\ea\expandafter
  \ea\MakeLowercase\ea{\csname thesis@#1\endcsname}}}
\def\thesis@upper#1{{%
  \let\ea\expandafter
  \ea\MakeUppercase\ea{\csname thesis@#1\endcsname}}}
```

`\thesis@@lower` `\thesis@@upper` The `\thesis@@lower` and `\thesis@@upper` macros are used for upper- and lowercasing current *locale* strings within style files. To cast the `\thesis@`*locale*`@`*name* macro to the lower- or uppercase, `\thesis@@lower{`*name*`}` or `\thesis@@upper{`*name*`}` would be used, respectively. The *name* gets fully expanded and can therefore contain active characters and command sequences.

```
\def\thesis@@lower#1{\thesis@lower{\thesis@locale @#1}}
\def\thesis@@upper#1{\thesis@upper{\thesis@locale @#1}}
```

`\thesis@head` `\thesis@tail` The `\thesis@head` and `\thesis@tail` macros are used for retrieving the head or the tail of space-separated token sequences that end with `\relax`.

```
\def\thesis@head#1 #2{%
  \ifx\relax#2%
    \expandafter\@gobbletwo
  \else
    \ #1%
  \fi
  \thesis@head#2}%
\def\thesis@tail#1 #2{%
  \ifx\relax#2%
    #1%
    \expandafter\@gobbletwo
  \fi
  \thesis@tail#2}%
```

3.3 General purpose macros

`\thesis@pages` The `\thesis@pages` macro contains the last page number within the document. During the first TEX compilation, the macro expands to ??.

```
\ifx\thesis@pages\undefined\def\thesis@pages{??}\fi
```

`\thesis@selectLocale` `\thesis@selectLocale{`⟨*locale*⟩`}` macro redefines the `\thesis@locale` macro to *locale*, switches to the hyphenation patterns of *locale*, and starts using the `\thesis@`*locale*`@csquotesStyle` style of the csquotes package. The respective locale files and polyglossia locale definitions should be loaded beforehand using the `\thesis@requireLocale` macro.

This macro should always be used within a group, so that the locale, csquotes, and hyphenation settings return back to what the user has specified after the localized blocks of typographic material.

```
\def\thesis@selectLocale#1{%
  \edef\thesis@locale{#1}%
  \ltx@ifpackageloaded{csquotes}{%
```

```
    \csq@setstyle{\thesis@@{csquotesStyle}}%
  }{}%
  \ltx@ifpackageloaded{polyglossia}{%
    \selectlanguage{\thesis@locale}
  }{%
    \language\csname l@\thesis@locale\endcsname
  }}
```

`\thesis@patch` The `\thesis@patch{`⟨*versions*⟩`}{`⟨*patch*⟩`}` macro expands *patch*, if `\thesis@version@number` (defined at the top of the file `fithesis4.cls`) matches any of the comma-delimited *versions*. This macro enables the simple deployment of version-targeted patches.

```
\def\thesis@patch#1#2{%
  \def\thesis@patch@versions{#1}%
  \def\thesis@patch@action{#2}%
  \def\thesis@patch@next##1,{%
    \def\thesis@patch@arg{##1}%
    \def\thesis@patch@relax{\relax}%
    \ifx\thesis@patch@arg\thesis@version@number
      \def\thesis@patch@next####1\relax,{}%
      \expandafter\thesis@patch@action
      \expandafter\thesis@patch@next
    \else\ifx\thesis@patch@arg\thesis@patch@relax\else
      \expandafter\expandafter\expandafter\thesis@patch@next
    \fi\fi}%
  \expandafter\expandafter\expandafter\thesis@patch@next
  \expandafter\thesis@patch@versions\expandafter,\relax,}
```

`\thesis@xpatch` The `\thesis@xpatch{`⟨*command*⟩`}{`⟨*search*⟩`}{`⟨*replace*⟩`}` macro is used to to replace *search* with *replace* in the definition of *command*. If the replacement fails, a class error is written to the output.

```
\long\def\thesis@xpatch#1#2#3{%
  \xpatchcmd{#1}{#2}{#3}{}%
    {\ClassError{fithesis4}{%
       Command \string#1 does not contain the searched text}{}}}
```

3.4 Locale files

Locale files contain macro definitions for various locales. They live in the `locale/` subtree and they are loaded during the main routine (see Section 2.4).

When creating a new locale file, it is advisable to create one self-contained `dtx` file, which is then partitioned into locale files via the `docstrip` tool based on the

`\file` respective `ins` file. A macro `\file{`⟨*filename*⟩`}` is available for the sectioning of the documentation of various files within the `dtx` file. For more information about `dtx` files and the `docstrip` tool, consult the `dtxtut`, `docstrip`, `doc` and `ltxdoc` manuals.

Mind that the name of the locale is also used to load hyphenation patterns, which is why it shouldn't be arbitrary. To see the names of the hyphenation patterns, consult the `hyph-utf8` manual.

3.4.1 Interface

The union of locale files loaded via the locale file inheritance scheme (see the definition of the `\thesis@requireLocale` macro in Section 3.1) needs to globally

define the following macros:

- `\thesis@`*locale*`@csquotesStyle` – The name of the style of the csquotes package that matches this locale
- `\thesis@`*locale*`@universityName` – The name of the university
- `\thesis@`*locale*`@facultyName` – The name of the faculty
- `\thesis@`*locale*`@assignment` – The instructions to replace the current page with the official thesis assignment
- `\thesis@`*locale*`@declaration` – The thesis declaration text
- `\thesis@`*locale*`@fieldTitle` – The title of the field of study entry
- `\thesis@`*locale*`@advisorTitle` – The title of the advisor entry
- `\thesis@`*locale*`@authorTitle` – The title of the author entry
- `\thesis@`*locale*`@abstractTitle` – The title of the abstract section
- `\thesis@`*locale*`@keywordsTitle` – The title of the keywords section
- `\thesis@`*locale*`@thanksTitle` – The title of the acknowledgements section
- `\thesis@`*locale*`@declarationTitle` – The title of the declaration section
- `\thesis@`*locale*`@idTitle` – The title of the thesis author's identifier field
- `\thesis@`*locale*`@spring` – The name of the spring semester
- `\thesis@`*locale*`@fall` – The name of the fall semester
- `\thesis@`*locale*`@semester` – The full name of the current semester
- `\thesis@`*locale*`@typeName` – The name of the thesis type
- `\thesis@`*locale*`@authorSignature` – The label of the author's signature field
- `\thesis@`*locale*`@formattedDate` – A formatted date
- `\thesis@`*locale*`@advisorSignature` – The label of the author's signature field

where *locale* is the name of the locale.

3.5 Style files

Style files define the structure and the look of the resulting document. They live in the `style/` subtree and they are loaded during the main routine (see Section 2.4).

When creating a new style file, it is advisable to create one self-contained `dtx` file, which can contain several files to be extracted via the `docstrip` tool based on the respective `ins` file. A macro `\file{`⟨*filename*⟩`}` is available for the sectioning of the documentation of various files within the `dtx` file. For more information about `dtx` files and the `docstrip` tool, consult the `dtxtut`, `docstrip`, `doc` and `ltxdoc` manuals.

`\file`

3.5.1 Interface

The union of style files loaded via the style file inheritance scheme (see the definition of the `\thesis@requireStyle` macro in Section 3.1) should globally define at least one of the following macros:

`\thesis@blocks@preamble`
- `\thesis@blocks@preamble` – If autolayout is enabled, then this macro is expanded at the very beginning of the document.

`\thesis@blocks@postamble`
- `\thesis@blocks@postamble` – If autolayout is enabled, then this macro is expanded at the very end of the document.

`\thesis@blocks@mainMatter`
- `\thesis@blocks@mainMatter` – If autolayout is enabled, then this macro is expanded at the beginning of the document right after `\thesis@blocks@preamble`. This macro sets the style of the main matter of the thesis.

3.5.2 Base style files

3.5.2.1 The `style/fithesis-base.sty` file

If inheritance is enabled for style files, then this file is always the first style file to be loaded, regardless of the value of the `\thesis@style` macro. This style file is currently a dummy file.

```
\NeedsTeXFormat{LaTeX2e}
\ProvidesPackage{fithesis/style/fithesis-base}[2018/02/11]

\DeclareRobustCommand\em
        {\@nomath\em \ifdim \fontdimen\@ne\font >\z@
                        \eminnershape \else \itshape \fi}%
```

3.5.2.2 The `style/mu/fithesis-base.sty` file

This is the base style file for theses written at the Masaryk University in Brno. When inheritance is enabled for style files, this file is always the second style file to be loaded right after `style/fithesis-base.sty`, regardless of the value of the `\thesis@style` macro.

```
\ProvidesPackage{fithesis/style/mu/fithesis-mu-base}[2022/08/15]
\NeedsTeXFormat{LaTeX2e}
```

The file recognizes the following options:

- `10pt`, `11pt`, `12pt` – Sets the type size to 10, 11 or 12 points respectively.

```
    \DeclareOption{10pt}{\def\thesis@ptsize{0}}
    \DeclareOption{11pt}{\def\thesis@ptsize{1}}
    \DeclareOption{12pt}{\def\thesis@ptsize{2}}
```

- `oneside`, `twoside` – The document is going to be either single- or double-sided, respectively. In a double-sided document, headers, page numbering, margin notes and several other elements will be arranged based on the parity of the page. Blank pages will also be inserted prior the beginning of each chapter to ensure that it starts on a right-hand (odd-numbered) page. The `\ifthesis@twoside@` conditional is set to either `false` or `true`, respectively.

`\ifthesis@twoside@`

```
    \newif\ifthesis@twoside@
    \DeclareOption{oneside}{%
```

```
1351      \thesis@twoside@false\@twosidefalse\@mparswitchfalse}
1352    \DeclareOption{twoside}{%
1353      \thesis@twoside@true \@twosidetrue \@mparswitchtrue}
```

- `onecolumn`, `twocolumn` – The document is going to be set in either a single column or in two columns, respectively.

```
1354    \DeclareOption{onecolumn}{\@twocolumnfalse}
1355    \DeclareOption{twocolumn}{\@twocolumntrue}
```

- `draft`, `final` – Overful lines either are or aren't marked within the document, respectively, and graphics either aren't or are inserted into the document, respectively.

```
1356    \DeclareOption{draft}{\setlength\overfullrule{5pt}}
1357    \DeclareOption{final}{\setlength\overfullrule{0pt}}
```

- `palatino`, `nopalatino` – The roman text font family and the math font family is going to be either set to Palatino or left untouched, respectively. The `\ifthesis@palatino@` conditional is set to either `true` or `false`, respectively. The Palatino font is a part of the visual identity of the Faculty of Informatics at which the document class was created.

```
1358    \newif\ifthesis@palatino@
1359    \DeclareOption{palatino}{\thesis@palatino@true}
1360    \DeclareOption{nopalatino}{\thesis@palatino@false}
```

- `neuehaas`, `noneuehaas` – The sans serif text font family is going to be either set to Neue Haas (TeX Gyre Heros) or left untouched, respectively. The `\ifthesis@neuehaas@` conditional is set to either `true` or `false`, respectively. The Neue Haas font is a sans serif font chosen to represent the Masaryk University in Brno as per its Graphic manual.

```
1361    \newif\ifthesis@neuehaas@
1362    \DeclareOption{neuehaas}{\thesis@neuehaas@true}
1363    \DeclareOption{noneuehaas}{\thesis@neuehaas@false}
```

- `color`, `monochrome` – Certain typographical elements either are or aren't going to be typeset in color, respectively. The `\ifthesis@color@` conditional is set to either `true` or `false`, respectively.

```
1364    \newif\ifthesis@color@
1365    \DeclareOption{monochrome}{\thesis@color@false}
1366    \DeclareOption{color}{\thesis@color@true}
```

- `colorbold`, `nocolorbold` – The bold text either is or isn't colored (black is used instead). The `\ifthesis@colorbold@` conditional is set to either `true` or `false`, respectively.

```
1367    \newif\ifthesis@colorbold@
1368    \DeclareOption{colorbold}{\thesis@colorbold@true}
1369    \DeclareOption{nocolorbold}{\thesis@colorbold@false}
```

- `microtype`, `nomicrotype` – The microtypographic extension of modern TEX engines – such as pdfTEX, XETEX, or LuaTEX – is or isn't going to be enabled, respectively. The `\ifthesis@microtype@` conditional is set to either `true` or

`false`, respectively.

```
\newif\ifthesis@microtype@
\DeclareOption{microtype}{\thesis@microtype@true}
\DeclareOption{nomicrotype}{\thesis@microtype@false}
```

- `sansbold`, `nosansbold` – The `\bfseries` command for switching to the bold typeface is or isn't going to use the sans-serif type face, respectively. The `\ifthesis@sansbold@` conditional is set to either `true` or `false`, respectively.

```
\newif\ifthesis@sansbold@
\DeclareOption{sansbold}{\thesis@sansbold@true}
\DeclareOption{nosansbold}{\thesis@sansbold@false}
```

- `table`, `oldtable` – If the `\ifthesis@color@` conditional is `true`, then the definitions of the `tabular`, `tabularx`, and `tabu` commands either are or aren't going to be altered to better match the style, respectively. The `\ifthesis@newtable@` conditional is set to either `true` or `false`, respectively.

```
\newif\ifthesis@newtable@
\DeclareOption{table}{\thesis@newtable@true}
\DeclareOption{oldtable}{\thesis@newtable@false}
```

The choice of the option name is deliberate – the redefinition of the table environments depends on the `xcolor` package, which needs to be loaded with the `table` option. Since so many other packages depend on the `xcolor` package and this style file is loaded at the very end of the preamble, there would either be a great chance of an option clash, or the option would have to be passed to the `xcolor` package before the preamble from the body of the `fithesis4` class thus breaking the encapsulation. Naming the option `table` forces the option to be processed by the `xcolor` package as well and it is therefore an elegant solution to the problem at hand.

- `lot`, `nolot` – The `\thesis@blocks@lot` macro will be defined as either `\listoftables` or `\relax`, respectively. As a side effect, the `\listoftables` either is or isn't going to be included in the `\thesis@blocks@tables` block, respectively.

```
\DeclareOption{nolot}{\let\thesis@blocks@lot\relax}
\DeclareOption{lot}{\let\thesis@blocks@lot\listoftables}
```

- `lof`, `nolof` – The `\thesis@blocks@lof` macro will be defined as either `\listoffigures` or `\relax`, respectively. As a side effect, the `\listoffigures` either is or isn't going to be included in the `\thesis@blocks@tables` block, respectively.

```
\DeclareOption{nolof}{\let\thesis@blocks@lof\relax}
\DeclareOption{lof}{\let\thesis@blocks@lof\listoffigures}
```

- `cover`, `nocover` – The `\thesis@blocks@cover` either is going to expand to either the thesis cover or produces no output, respectively. The `\ifthesis@cover@` conditional is set to `false` or `true`, respectively.

```
\newif\ifthesis@cover@
\DeclareOption{nocover}{\thesis@cover@false}
\DeclareOption{cover}{\thesis@cover@true}
```

- `digital`, `printed` – These macrooptions set the options that are appropriate for either the printed or for the digital version of the document, respectively. The `\ifthesis@digital@` conditional is set to `true` or `false`, respectively.

\ifthesis@digital@

```
\newif\ifthesis@digital@
\DeclareOption{digital}{%
  \ExecuteOptions{color,cover,colorbold}%
  \thesis@digital@true}
\DeclareOption{printed}{%
  \ExecuteOptions{monochrome,nocover,nocolorbold}%
  \thesis@digital@false}
```

These are the default options:

```
\ExecuteOptions{%
 printed,12pt,twoside,final,microtype,sansbold,palatino,neuehaas,oldtable,lot,lof}
\ProcessOptions*
```

The file uses English locale strings within the macros.

```
\thesis@requireLocale{english}
```

The file loads the following packages:

- xcolor – Adds support for color.
- caption – Adds support for changing the formatting of float captions.
- ifxetex – Used to detect the XeTeX engine.
- ifluatex – Used to detect the LuaTeX engine.
- graphix – Adds support for the inclusion of graphics files.
- pdfpages – Adds support for the injection of PDF documents into the resulting document, namely the thesis assignment.
- hyperref – Adds support for the injection of metadata into the resulting PDF document.
- keyval – Adds support for parsing comma-delimited lists of key-value pairs.
- tabularx – Provides the `tabularx` environment, which enables the typesetting of tables with flexible-width columns.
- tabu – Provides the `tabu` environment, which enables the typesetting of complex tables.
- booktabs – A package, which allows the creation of publication-quality tables in LaTeX.

```
\thesis@require{xcolor}
\RequirePackage[labelfont=bf]{caption}
\thesis@require{graphicx}
\thesis@require{pdfpages}
\thesis@require{keyval}
\thesis@require{ifxetex}
\thesis@require{ifluatex}
\thesis@require{tabularx}
```

```
\thesis@require{tabu}
\thesis@require{booktabs}
\thesis@require{tikz}
```

If the `\thesis@microtype@` is set to true, then the microtype package gets loaded.

```
\ifthesis@microtype@
  \thesis@require[final,babel]{microtype}
\fi
```

`\ifthesis@xeluatex` Using the `\ifxetex` and `\ifluatex` conditionals, a compound `\ifthesis@xeluatex` conditional was constructed. This conditional can be used by subsequently loaded style files to test, whether either the XeTeX or the LuaTeX engine is being used.

```
{\let\x\expandafter
\x\global\x\let\x\ifthesis@xeluatex\csname if%
  \ifxetex true\else
    \ifluatex\x\x\x t\x\x\x r\x\x\x u\x\x\x e%
    \else   f\x\x\x a\x\x\x l\x\x\x s\x\x\x e%
    \fi
  \fi\endcsname}
```

The following packages get only loaded, when the document is being typeset using the XeTeX or LuaTeX engine:

- fontspec – Allows the selection of system-installed fonts.
- unicode-math – Allows the selection of system-installed mathematical fonts.

Under XeTeX or LuaTeX, the TeX Gyre Pagella and TeX Gyre Pagella Math fonts are also selected as the main text and math fonts and the TeX Gyre Heros font is selected as the main sans serif font.

```
\ifthesis@xeluatex
  \ifthesis@palatino@
    \thesis@require{fontspec}
    \thesis@require{unicode-math}
    \setmainfont[Ligatures=TeX]{TeX Gyre Pagella}
    \setmathfont[math-style=ISO,bold-style=ISO]{texgyrepagella-math.otf}
  \fi
  \ifthesis@neuehaas@
    \thesis@require{fontspec}
    \setsansfont[Ligatures=TeX,Scale=MatchLowercase]{TeX Gyre Heros}
  \fi
```

The following packages get only loaded, when the document is not being typeset using the XeTeX or LuaTeX engine, the `\ifthesis@palatino@` conditional is `true`, and the `\ifthesis@neuehaas@` conditional is `true`:

- cmap – Places an explicit `ToUnicode` map in the resulting PDF file, allowing for the extraction of the text from the document.
- mathpazo – Changes the default math font family to `mathpazo`.
- tgpagella – Changes the default roman font family to TeX Gyre Pagella.
- tgheros – Changes the default sans-serif font face to TeX Gyre Heros.
- lmodern – Changes the default sans-serif and monotype font faces to Latin Modern instead of the default Computer Modern font family.

- fontenc – The font encoding is set to Cork.

```
\else
  \ifthesis@palatino@
    \RequirePackage[resetfonts]{cmap}
    \thesis@require{lmodern}
    \thesis@require{mathpazo}
    \thesis@require{tgpagella}
    \RequirePackage[T1]{fontenc}
  \fi
  \ifthesis@neuehaas@
    \thesis@require[scale=0.863]{tgheros}
    \RequirePackage[T1]{fontenc}
  \fi
\fi
```

If the `\thesis@newtable@` conditional is `true`, then some of the dimensions associated with tables are modified in preparation for the coloring of the table cells.

```
\let\thesis@newtable@old\tabular
\let\endthesis@newtable@old\endtabular
\ifthesis@newtable@
  % Adjust the measurements.
  \setlength{\aboverulesep}{0pt}
  \setlength{\belowrulesep}{0pt}
  \setlength{\extrarowheight}{.75ex}
```

When both the `\thesis@newtable@` and `\thesis@color@` conditionals are `true`, then the `tabular` and `tabularx` environments are redefined to better match the style of the given faculty.

`\thesis@newtable@old` `\endthesis@newtable@old` `\thesis@newtable@oldx` `\endthesis@newtable@oldx` `\thesis@newtable@oldtabu` `\endthesis@newtable@oldtabu`

The `\thesis@newtable@old` and `\endthesis@newtable@old` macros containing the original definition of the `tabular` environment are always defined and are available for subsequently loaded styles in case the typesetting of unaltered tables is required. Similarly, the `\thesis@newtable@oldx` and `\endthesis@newtable@oldx` macros are defined for the `tabularx` environment and the `\thesis@newtable@oldtabu` and `\endthesis@newtable@oldtabu` for the `tabu` environment.

```
  \ifthesis@color@
    % The redefinition of `tabular'
    \renewenvironment{tabular}%
      {\rowcolors{1}{thesis@color@tableOdd}%
                    {thesis@color@tableEven}%
       \thesis@newtable@old}%
      {\endthesis@newtable@old}
    % The redefinition of `tabularx'
    \let\thesis@newtable@oldx\tabularx
    \let\endthesis@newtable@oldx\endtabularx
    \renewenvironment{tabularx}%
      {\rowcolors{1}{thesis@color@tableEven}%
                    {thesis@color@tableOdd}%
       \thesis@newtable@oldx}%
      {\endthesis@newtable@oldx}
    % The redefinition of `tabu'
    \let\thesis@newtable@oldtabu\tabu
    \let\endthesis@newtable@oldtabu\endtabu
    \renewenvironment{tabu}%
```

```
      {\rowcolors{1}{thesis@color@tableEven}%
                    {thesis@color@tableOdd}%
       \thesis@newtable@oldtabu}%
      {\endthesis@newtable@oldtabu}
  \fi
\fi
```

`\ifthesis@bibliography@` A new conditional, `\ifthesis@bibliography@`, is defined. This conditional is true, when `\thesis@bibFiles` expands to a non-empty token list.

```
\newif\ifthesis@bibliography@
\thesis@bibliography@false
\ifx\thesis@bibFiles\undefined\else
  {\edef\@bibList{\thesis@bibFiles}%
  \ifx\@bibList\empty\else
    \global\thesis@bibliography@true
  \fi}
\fi
```

`\thesis@bibliography@setup` The file defines the `\thesis@bibliography@setup{`⟨*options*⟩`}` command, where *options* is a comma-delimited list of key-value pairs as defined by the `keyval` package. The command can be invoked by the subsequently loaded style files to define the bibliography options.

```
\def\thesis@bibliography@setup#1{%
  \setkeys{thesis@bibliography}{#1}}
```

The following key-value pairs are supported:

`\thesis@bibliography@style`

1. `{`⟨`style=`*style*⟩`}` – Stores `style` in `\thesis@bibliography@style`, unless it has already been defined (presumably by the user).

`\thesis@bibliography@sorting`

2. `{`⟨`sorting=`*mode*⟩`}` – Stores `mode` in `\thesis@bibliography@sorting`, unless it has already been defined (presumably by the user).

```
\define@key{thesis@bibliography}{style}{%
  \ifx\thesis@bibliography@style\undefined
    \def\thesis@bibliography@style{#1}%
  \fi}
\define@key{thesis@bibliography}{sorting}{%
  \ifx\thesis@bibliography@sorting\undefined
    \def\thesis@bibliography@sorting{#1}%
  \fi}
```

The following extra data field is defined for the macro:

- `bibliography` – the comma-delimited list of key-value pairs accepted by `\thesis@bibliography@setup`. If the data field was specified, it is immediately passed to `\thesis@bibliography@setup` and it overrides any defaults specified in faculty style files.

```
\thesis@def@extra[]{bibliography}
\ifx\thesis@extra@bibliography
    \thesis@placeholder@extra@bibliography\else
  \expandafter\thesis@bibliography@setup\expandafter{%
    \thesis@extra@bibliography}%
\fi
```

\thesis@bibliography@load When \ifthesis@bibliography@ is true and \ifthesis@bibliography@loaded@ is false, the \thesis@bibliography@load macro loads the csquotes and BibLaTeX packages with the bibliography databases specified in \thesis@bibFiles. The
\thesis@bibliography@loaded macro also sets the \ifthesis@bibliography@loaded@ conditional to true.

```
\newif\ifthesis@bibliography@loaded@
  \thesis@bibliography@loaded@false
\newif\ifthesis@bibliography@included@
  \thesis@bibliography@included@false
\def\thesis@bibliography@load{%
  \ifthesis@bibliography@
    \ifthesis@bibliography@loaded@\else
      \thesis@bibliography@loaded@true
      % Load csquotes and BibLaTeX.
      \thesis@require{csquotes}
```

If \thesis@bibliography@style is undefined, the bibliography and citation styles default to iso-numeric. If \thesis@bibliography@sorting is undefined, the sorting scheme defaults to none.

```
      \thesis@bibliography@setup{
        style = iso-numeric,
        sorting = none}
      % FIXME: This is a hotfix for biblatex.

fthesis@bibliography@included@ The \ifthesis@bibliography@included@ conditional is true, when the user has manually included a bibliography into their document. The default value of the conditional is false and \printbibliography is patched to set the conditional to true on expansion. This enables the user to place the bibliography manually without it appearing in the autolayout. The original macro is stored in the
\thesis@printbibliography@old \thesis@printbibliography@old macro.

```

`\thesis@color@setup` The file defines the `\thesis@color@setup{`⟨*colors*⟩`}` command, where *colors* is a comma-delimited list of key-value pairs as defined by the keyval package. The command can be invoked either by the subsequently loaded style files or by the user to define which colors will be used, when the `color` option is specified.

```
\def\thesis@color@setup#1{%
  \setkeys{thesis@color}{#1}}
```

The following key-value pairs are supported:

1. {⟨`links`=*color*⟩} – Sets the color of hyperref links to *color* and stores it under the name `thesis@color@links`. The default color of links is specified by the hyperref package.
2. {⟨`secondary`=*color*⟩} – Stores the secondary color that is used with the bold type face under the name `thesis@color@secondary`. The default secondary color for the Masaryk University is RGB 0, 0, 220.
3. {⟨`tableOdd`=*color*⟩} – Stores the color of the odd rows of the redefined `tabular` and `tabularx` environments under the name `thesis@color@tableOdd`.
4. {⟨`tableEven`=*color*⟩} – Stores the color of the even rows of the redefined `tabular` and `tabularx` environments under the name `thesis@color@tableEven`.
5. {⟨`tableEmph`=*color*⟩} – Stores the color of an emphasized cell in a table user under the name `thesis@color@tableEmph`. This color is meant to be used manually by the user.

```

\thesis@blocks@coverMatter

The \thesis@blocks@coverMatter macro sets up the style of the cover and the title page of the thesis. This amounts to disabling the page numbering, so that hyperref links do not point to the cover page and the title page instead of the initial pages of the main matter.

```

`\thesis@blocks@titlePage` The `\thesis@blocks@titlePage` macro typesets the thesis title page. The output of the `\thesis@blocks@titlePage` macro is controlled by the following conditionals:

1. `\ifthesis@blocks@titlePage@department@` – This conditional expression determines, whether the department name is going to be included in the title page. The default value of this conditional is `true`.

2. `\ifthesis@blocks@titlePage@field@` – This conditional expression determines, whether the field of study is going to be included in the title page. The default value of this conditional is `true`.

3. `\ifthesis@blocks@titlePage@programme@` – This conditional expression determines, whether the study programme is going to be included in the title page. The default value of this conditional is `false`.

`\thesis@blocks@bibliography` When `\ifthesis@bibliography@loaded@` is true and `\ifthesis@bibliography@included@` false, then the `\thesis@blocks@bibliography` macro typesets a bibliography via the BibLaTeX package. Otherwise, this macro produces no output.

This file is conditionally loaded by the `style/mu/base.sty` file to redefine the page geometry to match the type size of 12 points. The type dimensions defined by the file are stored in the following macros as well:

`\thesis@titlePage@normalsize` • `\thesis@titlePage@normalsize` – Equivalent to `\normalsize`

`\thesis@titlePage@small` • `\thesis@titlePage@small` – Equivalent to `\small`

`\thesis@titlePage@footnotesize` • `\thesis@titlePage@footnotesize` – Equivalent to `\footnotesize`

`\thesis@titlePage@scriptsize` • `\thesis@titlePage@scriptsize` – Equivalent to `\scriptsize`

\thesis@titlePage@tiny
- \thesis@titlePage@tiny – Equivalent to \tiny

\thesis@titlePage@large
- \thesis@titlePage@large – Equivalent to \large

\thesis@titlePage@Large
- \thesis@titlePage@Large – Equivalent to \Large

\thesis@titlePage@LARGE
- \thesis@titlePage@LARGE – Equivalent to \LARGE

\thesis@titlePage@huge
- \thesis@titlePage@huge – Equivalent to \huge

\thesis@titlePage@Huge
- \thesis@titlePage@Huge – Equivalent to \Huge

These macros can be used to typeset elements whose size should remain constant regardless of the font size setting.

The file loads the following packages:

- tikz – Used for dimension arithmetic.
- geometry – Allows for modifications of the type area dimensions.
- array – Enables `<{decl.}` and `>{decl.}` declarations in table preambles.

3.5.10 The style files of the Faculty of Medicine

3.5.10.1 The `style/mu/fithesis-med.sty` file

This is the style file for the theses written at the Faculty of Medicine at the Masaryk University in Brno. It has been prepared in accordance with the formal requirements published at the website of the faculty [10].

```
\NeedsTeXFormat{LaTeX2e}
\ProvidesPackage{fithesis/style/mu/fithesis-mu-med}[2021/07/18]
```

The file defines the color scheme of the respective faculty. Note the the color definitions are in RGB, which makes the resulting files generally unsuitable for printing.

```

  tableEmph={HTML}{FF9D85},
  tableOdd={HTML}{FFF5F6},

The bibliography support is enabled. The `authortitle` citations are used and the bibliography is sorted by year, name, and title.

```
\thesis@bibliography@setup{%
  style=authortitle,
  sorting=ynt}
\thesis@bibliography@load
```

The AMA citation style is defined using `authortitle` as the basis. The following code has been adapted from https://tex.stackexchange.com/a/233423/70941.

```

The file loads the following packages:

- tikz – Used for dimension arithmetic.
- geometry – Allows for modifications of the type area dimensions.
- setspace – Allows for line height modifications.

In addition to this, the type area width is set to 16 cm in accordance with the formal requirements of the faculty. This leads to overfull lines and is against the good conscience of the author of this style.

General: Fixed a non-terminated `\if` condition. [VN] (backport of v0.2.18) Fixed mostly documentation errors reported at the new fithesis discussion forum (-ti, eco→econ, implicit twocolumn, example extended (font setup), etc.). [PS] (backport of v0.2.17) 1
v0.3.09
General: A complete refactoring of the class. The class was decomposed into a base class, locale files and style files. [VN] . 1
v0.3.10
General: Fixed a typo in the technical documentation. Updated the *Advanced usage* chapter of the user guide. The required packaged listed in Section 2.2 of the user guide are now always correct. Adjusted the footer spacing in the styles

of econ and fi. Added *Advanced usage* chapter to the user guide. Added the description of basic options into the user guide. Added the `table` and `oldtable` options. Added the `type` field to the guide for completeness. [VN] 1

v0.3.11

General: Added hyphenation into the technical documentation. Fixed an unterminated group. Polished the text of the guide. Added the `palatino` and `nopalatino` options. Stylistic changes to the text of the technical documentation. `\thesis@subdir` is now robust against relative paths. Accounted for French spacing in the guide. Fixed the `thesis@english@facultyName` string. Documentation refinements. [VN] 1

v0.3.12

General: The subsections and subsubsections now use the correct `tocdepth`. [VN] 1

v0.3.13

General: Fixed an inconsistency in the example code. Removed an extraneous `\thesis@blocks@clear` block withing the definition of `\thesis@blocks@frontMatter` in the fss style file. Added comments, fixed clubs and widows and removed text overflows within the user guides. Adjusted the colors of various style files. Removed the trailing dot in the bibliographic identification within the med and ped style files. Fixed a typo within the technical documentation. Fixed the twoside alignment of the `\thesis@blocks@bibEntry` and the `\thesis@blocks@bibEntryEn` blocks within the sci style file. The `\thesis@blocks@assignment` block no longer clears a page when nothing is inserted. It is also no longer hard-coded to be hidden for rigorous theses. Instead, the `\ifthesis@blocks@assignment` conditional can be set either by the subsequently loaded style files or by the user. So far, only the fi and sci style files set the conditional. [VN] 1

v0.3.14

General: Updated the documentation. [VN] 1

v0.3.15

General: Renamed `\thesis@requireStyle` to `\thesis@requireWithOptions` and moved the style loader from the `\thesis@load` routine to a new `\thesis@requireStyle` macro to make the semantics of `\thesis@requireLocale` and `\thesis@requireStyle` more similar. Changed the `basepath`, `logopath`, `localepath` and `stylepath` keys to match the lower camelcasing of the rest of the keys. Added further description regarding the use of the `assignment` key. [VN] 1

v0.3.16

General: Clubs and widows are now set to be infinitely bad. The `assignment` key has weaker, but more robust semantics now. [VN] 1

v0.3.17

General: Changed a forgotten `\thesis@@lower{...}` invocation in the definition of `\thesis@czech@declaration` for the Faculty of Arts into `\thesis@@lower{czech@...}`, so that the macro always expands to the correct output regardless of the current locale. This is merely a matter of consistency, since the style file of the Faculty of Arts only uses Czech strings within the Czech locale. Removed an extraneous comment. Fixed a unit test. Fixed a changelog entry. [VN] . . 1

v0.3.18
General: A bulk of changes required to submit the document class to CTAN: Changed the structure of the output `fithesis3.ctan.zip` archive. Updated the license notice. Added a `README` file. Canonicalized a url within the user guides. Renamed the root directory from `fithesis3/` to `fithesis/`. Refactored the makefiles. Added developer example files. Renamed `docstrip.cfg` to `LICENSE.tex` to better describe its role. The `fithesis.dtx` file now generates a `VERSION.tex` file containing the version of the package, when it's being typeset. Flattened the `logo/` directory structure. [VN] 1

v0.3.19
General: Updated the license. Added the `fithesis-` prefix to locale files. Proof-read and updated the documentation. Encapsulated the `localeInheritance` and `styleInheritance` setters. Added the `\thesis@selectLocale{...}`, which acts as a replacement for `\def\thesis@locale{...}`, which also switches hyphenation patterns. The macro definitions inside locale files are now global to account for the fact that it now makes sense to include locale files on-site (and therefore possibly inside a group) using the `\thesis@selectLocale`. The class files are now generated using the XeTeX engine, which preserves the characters outside ASCII. [VN] 1

v0.3.20
General: Removed an extraneous `\hypersetup` option to eliminate a warning. Performed several minor Makefile updates. Updated the technical documentation. [VN] 1

v0.3.21
General: Fixed an invalid font name. [VN] 1

v0.3.22
General: Updated the link colors in the style of the Faculty of Economics and Administration at the Masaryk University in Brno and fixed the title page leading in the style of the Faculty of Science at the Masaryk University in Brno. [VN] 1

v0.3.23
General: Fixed a typo in the Slovak locale. [VN] 1

v0.3.24
General: Added the `\thesis@backend` tunable. The hyphenation pattern switching now uses `polyglossia` instead of crude `\language` switching wherenever possible. Added the opt-out `microtype` class option, which loads the microtypographic extension. The `\thesis@`*locale*`@summer` and `@winter` locale macros were renamed to `@spring` and `@fall`. The `\thesis@parseDate` now uses more realistic month ranges to set `\thesis@season` and `\thesis@academicYear`. Removed the extraneous indent in the `\thesis@blocks@declaration` macro definition within the `style/mu/fithesis-fi.sty` style file. `\paragraphs` are not included in the table of contents by default. The `table` class option now supports the `tabu` environment. The list of tables and the list of figures now have an entry in the table of contents for the `style/mu/fithesis-econ.sty` style file. [VN] 1

v0.3.25
General: The example documents from the `example` directory are now a part of the CTAN archive. Additional information were inserted into the guide

and to the example files. [VN] . . 1
v0.3.26
General: Updated the example documents and the user guide. Fixed a typo in the description of \thesis@season. [VN] 1
v0.3.27:1
General: Fixed a typo in the guide. Added a compatibility layer for \title, \author, and \maketitle. Minor changes of the documentation. [VN] 1
v0.3.27:2
General: \thesis@selectLocale is no longer performed globally for the entire document during \thesis@load (effectively overriding the user's hyphenation settings, if Babel's or Polyglossia's \languagename differs from \thesis@locale). Instead, \thesis@preamble and @postamble now locally switch the locale and expand \thesis@blocks@preamble and @postamble, which are the new redefinables. Since this breaks the behaviour of \thesis@blocks@mainMatter, whose effects would also be local, @mainMatter is now executed directly by \thesis@preamble after closing the group and becomes a new part of the interface between the class and the style files. [VN] 1
v0.3.27:3
General: As a preparation for the future inclusion of bibliography support, the csquotes package is loaded, @csquotesStyle is a new part of the locale interface that sets the csquotes style of a locale, and \thesis@selectLocale now switches the csquotes style. [VN] 1
v0.3.27:4
General: \thesis@english@declaration now uses the correct idiom (by one's own → on one's own). [VN] 1
v0.3.27:5
General: The PDF bookmarks are no longer garbled, when the LuaTEX engine is used. [VN] . . . 1
v0.3.28:1
General: The draft option has no longer an effect on the microtype package. The \thesis@require command now also takes an optional argument and the \thesis@require\-WithOption command has become \thesis@require\-IfExists. [VN] 1
v0.3.28:2
General: If the thesis locale and the document locale is the same (the default behaviour), the \thesis@selectLocale macro is applied globally at the beginning of the document. As a result, the csquotes style is automatically set for the entire document. [VN] 1
v0.3.29:1
General: The initial pages of the styles of the Masaryk University in Brno are no longer page-numbered, so that hyperref links work correctly. [VN] 1
v0.3.29:2
General: The printed and digital class options, which set all the options appropriate for either the printed or the digital versions of a document, are now available for the style files of the Masaryk University in Brno. [VN] 1
v0.3.29:3
General: The table class option for the style files of the Masaryk University in Brno now loads all the required packages and changes the table measurements even when the color option is not specified. [VN] 1
v0.3.30
General: The \thesis@seasonYear macro has been added, which, unlike \thesis@year takes into

account the fact that January and Fabruary of the year n still belong to the fall semester of the year $n-1$. [VN] 1
v0.3.31:1
General: The redefinitions of `\appendix` from the `style/mu/fithesis-1*.clo` files, which broke hyperref links to appendices, were removed. [VN] 1
v0.3.31:2
General: All trailing `%`s were removed. Some of the inherited fithesis2 code in the `style/mu/fithesis-1*.clo` and `style/mu/fithesis-base.sty` files was refactored and reformatted. Alternative templates for the Faculty of Science at the Masaryk University in Brno are now mentioned in the respective user guide. [VN] 1
v0.3.31:3
General: The `style/mu/fithesis-sci.sty` style file redefines `\thesis@blocks@declaration` to include a formatted date and an author's signature field. The locale file `style/mu/sci/czech.def` contains a new string `\thesis@czech\discretionary {@}{@}{@}formattedDate`. [VN] 1
v0.3.32
General: Fixed a regression from v0.3.27:2 – The margins in `\thesis@blocks@mainMatter` were corrected in the style files of the Faculty of Economics and Administration and the Faculty of Medicine at the Masaryk University in Brno. [VN] 1
v0.3.33
General: Added `\thesis@patch`. [VN] 1
v0.3.34
General: Added visual tests of output PDFs. The `test/` directory is now also uses the *university/faculty* path scheme employed by the rest of the package. [VN] 1
v0.3.35:1
General: Added support for the Division of Information and Library Studies of the Faculty of Arts at the Masaryk University in Brno. This support is enabled by specifying `\thesis@department` to be `kisk`. [VN] 1
v0.3.35:2
General: Added support for seminar papers on the fithesis3 class level. The style files for the faculties of the Masaryk University in Brno do not provide any special handling of this thesis type yet. [VN] 1

v0.3.36
General: The `\thesis@load` macro has been lifted to the public API as `\thesisload`. [VN] 1
v0.3.37
General: The `\tableofcontents` in the style files of the Masaryk University in Brno now correctly handles all tocdepth values. The expansion of `\part` also no longer results in a hyperref-related error in the style files of the Masaryk University in Brno. [VN] 1
v0.3.38:1
General: The `bib` key was added on the fithesis3 class level and is supported by the style files of the Masaryk University in Brno. [VN] 1
v0.3.38:2
General: Fixed `\thesis@pages` not taking `\thesis@postamble` into account. Fixed the chapter number being printed regardless of secnumdepth by the style files of the Masaryk University in Brno. Fixed `\thesis@blocks@assignment` being typeset in Czech only by

the style file of the Faculty of Science at the Masaryk University in Brno. [VN] 1
v0.3.39:1
General: The `\thesis@blocks@bibliography` now uses an emergency stretch of 3 em in the style files of the Masaryk University in Brno. [VN] 1
v0.3.39:2
General: The `assignment` key no longer affects the page numbers and takes into account the `digital` and `printed` class options in the style files of the Masaryk University in Brno. [VN] 1
v0.3.40
General: Fixed `\thesis@pages` not working properly when the `autoLayout` key is set to `false`. Added a section on the `markdown` package to the example documents of the Masaryk University in Brno. Added the `\ifthesis@blocks@assignment@hideIfDigital@` conditional to the `style/mu/fithesis-base.sty` style file. [VN] 1
v0.3.41
General: Removed the arbitrary limitation of `\thesissetup`, which prevented it from accepting multi-paragraph values. The `\thesislong` macro is therefore no longer necessary, but kept around for backwards compatibility. [VN] 1
v0.3.42
General: Documented that all color settings are done in the RGB colorspace, which makes the color option suitable mostly for the digital versions of fithesis documents rather than for printing. Added the thesis proposal thesis type. [VN] 1
