gzt — A bundle of two classes and biblatex package styles for the French journal "La Gazette de la Société Mathématique de France"*

Implementation

Denis Bitouzé†

Released ?

Abstract

This bundle provides two classes and biblatex package styles for the French journal "La Gazette de la Société Mathématique de France":

- gzt for the complete issues of the journal, aimed at the Gazette's team,
- gztarticle, intended for authors who wish to publish an article in the Gazette. This class's goals are to
  - faithfully reproduce the layout of the Gazette, thus enabling the authors to be able to work their document in actual conditions, and
  - provide a number of tools (commands and environments) to facilitate the drafting of documents, in particular those containing mathematical formulas.

1 Auxiliary files

1.1 Gazette's logo

Before the code of the gzt class by itself, we give the begining of the code of the source file of the Gazette's logo (to be compiled with `lualatex`).

*This file describes version ?, last revised ?.

†E-mail: denis.bitouze@univ-littoral.fr

```
⟨*class-logo⟩

}

⟨/class-logo⟩
```

1.2 (biblatex package) Data model

Before the code of the gzt class by itself, we give the (biblatex) data model that enriches the default one for several purposes:

- the interviews,
- the books reviews,
- the books advertisements,
- the tributes.

⟨*languagemodel⟩

```
\ProvidesFile{gzt.lbx}
\InheritBibliographyExtras{french}
\DeclareBibliographyStrings{
  inherit          = {french},
  number           = {{\no}{\no}},
  volume           = {{volume}{vol\adddot}},
  volumes          = {{volumes}{vol\adddot}},
}
```

⟨/languagemodel⟩

⟨*datamodel⟩

1.2.1 For the interviews

First, we create the new entry type `interview` and the new field `interviewee`.

```
% \DeclareDatamodelEntrytypes{interview}
\DeclareDatamodelFields[type=list,datatype=name]{interviewee}
```

Then, we declare the fields known by the entry type `interview`: our new field `interviewee` and the existing one `author`.

```
\DeclareDatamodelEntryfields[interview]{
  interviewee,
  author
}
```

An finally, we create the bibliography driver for the `interview` (that seems to create the corresponding new entry).

```
\DeclareBibliographyDriver{interview}{%
  \printnames{author}~ interviewent~ \printnames{interviewee}%
  \usebibmacro{finentry}%
}
```

1.2.2 For the tributes

First, we create the new entry type `tribute` and the new field `honouree`.

```
% % \DeclareDatamodelEntrytypes{tribute}
% % \DeclareDatamodelFields[type=list,datatype=name]{honouree}
%
```

Then, we declare the fields known by the entry type `tribute`: our new field `honouree` and the existing one `author`.

```
% \DeclareDatamodelEntryfields[tribute]{
%   honouree,
%   author
% }
%
```

An finally, we create the bibliography driver for the `tribute` (that seems to create the corresponding new entry).

```
% \DeclareBibliographyDriver{tribute}{%
%   \printnames{author}~ rendent~ hommage~ \`a~ \printnames{honouree}%
%   \usebibmacro{finentry}%
% }
%
```

1.2.3 For the books reviews

First, we create the new bibliography driver `bookreview` (that seems to create the corresponding new entry).

```
\DeclareBibliographyDriver{bookreview}{%
  \usebibmacro{bibindex}%
  \usebibmacro{begentry}%
  \usebibmacro{maintitle+title}%
```

```
\newline\nopunct\newblock
\usebibmacro{author/editor+others/translator+others}%
\setunit{\labelnamepunct}
\newline\nopunct\newblock
\usebibmacro{byauthor}%
\newunit\newblock
\usebibmacro{byeditor+others}%
\newunit\newblock
\printfield{edition}%
\newunit
\iffieldundef{maintitle}
  {\printfield{volume}%
   \printfield{part}}
  {}%
\newunit
\printfield{volumes}%
\newunit\newblock
\usebibmacro{series+number}%
\newunit\newblock
\printfield{note}%
\newunit\newblock
\usebibmacro{publisher+location+date}%
\newunit\newblock
\usebibmacro{chapter+pages}%
\newunit
\printfield{pagetotal}%
\newunit\newblock
\printlist{language}%
\newunit\newblock
\iftoggle{bbx:isbn}
  {\printfield{isbn}}
  {}%
\newunit\newblock
\usebibmacro{doi+eprint+url}%
\newunit\newblock
\usebibmacro{addendum+pubstate}%
\setunit{\bibpagerefpunct}\newblock
\usebibmacro{pageref}%
```

```
  \newunit\newblock
  \iftoggle{bbx:related}
    {\usebibmacro{related:init}%
     \usebibmacro{related}}
    {}%
    \usebibmacro{finentry}}
```

Then, we create the new fields `reviewer` and `reviewerinstitution` and make them known by the entry type `bookreview`.

```
\DeclareDatamodelFields[type=list,datatype=name]{reviewer}
\DeclareDatamodelFields[type=list,datatype=literal]{reviewerinstitution}
\DeclareDatamodelEntryfields[bookreview]{
  reviewer,
  reviewerinstitution
}
```

1.2.4 For the books advertisements

We create some new fields make them known by the entry type `bookadvertisement`.

```
\DeclareDatamodelFields[type=field,datatype=literal]{publicprice}
\DeclareDatamodelFields[type=field,datatype=literal]{smfprice}
\DeclareDatamodelFields[type=field,datatype=literal]{frenchabstract}
\DeclareDatamodelFields[type=field,datatype=literal]{englishabstract}
\DeclareDatamodelFields[type=list,datatype=literal]{copublisher}
\DeclareDatamodelFields[type=field, datatype=verbatim]{thumbnail}
\DeclareDatamodelEntryfields[bookadvertisement]{
  publicprice,
  smfprice,
  frenchabstract,
  englishabstract,
  copublisher,
  thumbnail
}
```

Then, we create the new bibliography driver `bookadvertisement` (that seems to create the corresponding new entry).

```
\newcommand*{\insertbibimage}[1]{\includegraphics[width=45mm]{#1}}
\DeclareBibliographyDriver{bookadvertisement}{%
```

```
\begin{tcolorbox}[
  lefthand width=47.5mm
  ,sidebyside
  ,colback=white

⟨/datamodel⟩

2 Implementation of the gzt class

Here comes the code of the gzt class.

⟨∗class⟩

2.1 Removability of local customizations

We define two...

```
\def\sectioncommandslist{}
\let\saved@ifdefinable\@ifdefinable
\let\saved@@ifdefinable\@@ifdefinable
\newcommand{\startcustomization}{%
  % Redefine \@ifdefinable
  \renewcommand{\@ifdefinable}[2]{%
    \listadd\sectioncommandslist##1%
    \saved@ifdefinable{##1}{##2}%
  }%
  \renewcommand{\@@ifdefinable}[2]{%
```

```
    \listadd\sectioncommandslist##1%
    \saved@@ifdefinable{##1}{##2}%
  }%
}
\newcommand{\cleancustomization}{%
  \forlistloop{\undef}{\sectioncommandslist}%
  \def\sectioncommandslist{}%
  \let\@ifdefinable\saved@ifdefinable%
  \let\@@ifdefinable\saved@@ifdefinable%
}
```

⟨/class⟩

⟨∗class | class-article⟩

Extending etoolbox's patching commands:

```
\RequirePackage{xpatch}
```

We alter the behaviour of the internals of `\usetikzlibrary` so that the LaTeX 2_ε push/pop filename system is used (see https://tex.stackexchange.com/a/57428/18401).

```
\patchcmd
  {\use@@tikzlibrary}
  {%
    \pgfutil@InputIfFileExists{tikzlibrary\pgf@temp.code.tex}{}{
      \pgfutil@IfFileExists{pgflibrary\pgf@temp.code.tex}{%
        \expandafter\usepgflibrary\expandafter{\pgf@temp}%
      }{%
        \tikzerror{I did not find the tikz library
          '\pgf@temp'. I looked for files named
          tikzlibrary\pgf@temp.code.tex and
          pgflibrary\pgf@temp.code.tex, but neither
          could be found in the current texmf trees.}
      }%
    }%
  }
  {%
    \@pushfilename
```

```
      \pgfutil@InputIfFileExists{tikzlibrary\pgf@temp.code.tex}{}{
        \pgfutil@IfFileExists{pgflibrary\pgf@temp.code.tex}{%
          \expandafter\usepgflibrary\expandafter{\pgf@temp}%
        }{
          \tikzerror{I did not find the tikz library
            '\pgf@temp'. I looked for files named
            tikzlibrary\pgf@temp.code.tex and
            pgflibrary\pgf@temp.code.tex, but neither
            could be found in the current texmf trees.}
        }%
      }%
    \@popfilename
  }
  {}{}
\patchcmd
  {\tcb@input@library@in}
  {%
    \input\tcbpkgprefix#1\relax%
  }
  {%
    \@pushfilename
    \input\tcbpkgprefix#1\relax%
    \@popfilename
  }
  {}{}
```

In order to avoid `__gzt` in the name of each internal (i.e. private) function and variable, we make use of the `@@` place holder provided by the l3docstrip package.

```
⟨@@=gzt⟩
```

2.2 LaTeX3 loading

For debugging purpose, expl3 package could be loaded with its `check-declarations` option.

```
% \PassOptionsToPackage{check-declarations}{expl3}

\RequirePackage{l3keys2e}
```

This gzt class will make use of the expl3 programming interface (LaTeX3). In order to load this package, it is enough to load the xparse package which is anyway needed to produce document-level commands.

```
\RequirePackage{xparse}
```

The gzt class is declared in the LaTeX3's way.

```
\ProvidesExplClass
⟨class⟩  {gzt}
⟨class-article⟩  {gztarticle}
  {\gztfiledate}
  {\gztfileversion}
  {
    SMF~ class~ for~ the~ French~ journal^^J
    "La~ Gazette~ de~ la~ Soci'et'e~ Math'ematique~ de~ France".
⟨class-article⟩~ (Author~ version.)
  }
```

The needed TeX format is specified.

```
\NeedsTeXFormat{LaTeX2e}
```

2.3 Class loading

```
\bool_new:N \g__gzt_moral_report_bool
\bool_new:N \g__gzt_special_edition_bool
\bool_new:N \g__gzt_for_authors_bool
\bool_new:N \g__gzt_for_printer_bool
\bool_new:N \g__gzt_cover_bool
\bool_new:N \g__gzt_coverpage_bool
\bool_new:N \g__gzt_inside_pages_bool
%
\bool_new:N \g__gzt_no_inside_backcover_bool
⟨class-article⟩\bool_gset_true:N \g__gzt_for_authors_bool
⟨class-article⟩\bool_gset_true:N \g__gzt_inside_pages_bool
```

We define some common code to the `moralreport` global option of gzt and gztarticle.

```
\tl_gset:Nn \g__gzt_moral_report_common_option_tl {
```

```
  \AddToHook{begindocument/before} {
    \bool_gset_true:N \g__gzt_moral_report_bool
    \bool_gset_true:N \g__gzt_frontcover_without_minitoc_bool
    \title[short={\bfseries\c__gzt_moralreport_rubric_string_tl}]{}
    \tl_gset:Nn \g__gzt_rubric_title_tl {
      \c__gzt_moralreport_rubric_string_tl
    }
  }
}
```

⟨/class | class-article⟩

⟨∗class⟩

\c__gzt_pagegrid_dim We declare the constant dimension of the pagegrid, when enabled.

```
\dim_const:Nn \c__gzt_pagegrid_dim { 1mm}
```

(*End definition for* `\c__gzt_pagegrid_dim`.)

We define some class options:

- pagegrid in order to draw a grid on each page, in order to check the layout (mostly for debugging purpose),
- ...

```
\tl_gset:Nn \g__gzt_frontcover_image_file_tl {
  \c__gzt_issue_frontcover_default_image_file_tl
}
\tl_gset:Nn \g__gzt_special_edition_color_tl {
  __gzt_default_cover_color
}
\clist_new:N \g__gzt_special_edition_logos_clist
%
\keys_define:nn { gzt }
{
  pagegrid .dim_gset:N = \g__gzt_pagegrid_dim,
  pagegrid .default:n = {\c__gzt_pagegrid_dim},
  forauthors .code:n = {
    \bool_gset_true:N \g__gzt_for_authors_bool
```

```
    \bool_gset_true:N \g__gzt_inside_pages_bool
  },
  forprinter .bool_gset:N = \g__gzt_for_printer_bool,
  frontcoverimagefile .tl_gset:N = \g__gzt_frontcover_image_file_tl,
  frontcoverimagefile .default:n = {frontcover},
  output .choice:,
  output / frontcover .code:n = {
    \bool_gset_true:N \g__gzt_for_printer_bool
    \bool_gset_true:N \g__gzt_cover_bool
  },
  output / coverpage .code:n = {
    \bool_gset_true:N \g__gzt_coverpage_bool
  },
  output / insidepages .code:n = {
    \bool_gset_true:N \g__gzt_for_printer_bool
    \bool_gset_true:N \g__gzt_inside_pages_bool
  },
  output / backcover .code:n = {
    \bool_gset_true:N \g__gzt_for_printer_bool
  },

    }
  },
  moralreport .code:n = {
    \g__gzt_moral_report_common_option_tl
    \keys_set:nn { gztarticle / moralreport } {#1}
  },
  moralreport / title .code:n = {
    \tl_gset:Nn \g__gzt_moral_report_title_tl {#1}
  },
  moralreport / short~ title .code:n = {
    \tl_gset:Nn \g__gzt_moral_report_short_title_tl {#1}
  },
}
```

⟨/class-article⟩

⟨∗class⟩

If we want to disable the inside backcover.

```
% \bool_gset_true:N \g__gzt_no_inside_backcover_bool
```

```
\ProcessKeysOptions { gzt }
```

⟨/class⟩

⟨∗class | class-article⟩

As subsequent class, the book class is loaded, with openany, english and french options.

```
\PassOptionsToClass{openany,english,french}{book}
\LoadClass { book }
\PassOptionsToPackage{table,cmyk}{xcolor}
\PassOptionsToPackage{export}{adjustbox}
```

```
\PassOptionsToPackage{english,french}{translator}
\PassOptionsToPackage{english,french}{babel}
\PassOptionsToPackage{english,french}{varioref}
\PassOptionsToPackage{english,french}{cleveref}
```

2.4 Packages loading

Many of the gzt class features are provided by third party packages. In this section, we load them and outline their features interesting from the gzt class point of view.[1]

1. Compile TEX pictures stand-alone or as part of a document:

```
\RequirePackage[group=false]{standalone}
```

2. Tools to load and manipulate data:

```
\RequirePackage{datatool}
```

3. In case of pdfTEX engine, we enforce fontenc to be loaded with its `T1` option (usual for French and English documents) and inputenc to be loaded with its `utf8` option. Otherwise fontspec, convenient for both XƎLATEX and LuaLATEX, is loaded, with ligatures à la TEX by default enabled.

```
\sys_if_engine_pdftex:TF
  {
    \RequirePackage[T1]{fontenc}
    \RequirePackage[utf8]{inputenc}
  }{
    \RequirePackage{fontspec}
  }
```

   Load of main font to be used:

```
\RequirePackage[sfmath,noDcommand]{kpfonts}
```

4. Formatting both header and footers (pagestyle), and sections headers:

```
\RequirePackage[pagestyles]{titlesec}
```

[1] TODO: When possible, the list of loaded packages should be split into two lists: one of the packages needed just by *Gazette* (for both its logic and its layout) and one of packages useful for the end user.

5. Multicolumn output:

```
\RequirePackage{multicol}
```

6. Graphics inclusion:

```
\RequirePackage{graphicx}
```

7. Establish input relative to a directory:

```
⟨class⟩\RequirePackage{import}
```

8. Allow tables to flow over page boundaries:

```
\RequirePackage{longtable}
```

9. Put a grey textual watermark on document pages (loaded only if `forauthors` *Gazette*'s option is on):

```
⟨class⟩\bool_if:nT { \g__gzt_for_authors_bool } {
⟨class⟩   \RequirePackage{draftwatermark}[2006/06/30]
⟨class⟩}
```

10. Graphics package-alike macros for "general" boxes:

```
\RequirePackage{adjustbox}
```

11. Packages and image files for MWEs (used in case of missing pictograms):

```
\RequirePackage{mwe}
```

12. A new reference scheme for LaTeX, giving the total number of pages in the document:

```
\RequirePackage{zref-totpages}
```

13. Reference last page number (which is generally different from the total number of pages in the document):

```
⟨class⟩\RequirePackage{lastpage}
```

14. A new reference scheme for LaTeX, providing the facilities of the xr and xr-hyper packages:

```
\RequirePackage{zref-xr}
```

15. Alternative versions of `ragged`-type commands:

```
\RequirePackage{ragged2e}
```

16. Define commands that appear not to eat spaces:

```
\RequirePackage{xspace}
```

17. ...:

```
\RequirePackage{textcase}
```

18. For typesetting epigraphs:

```
\RequirePackage{epigraph}
```

19. Context sensitive quotation facilities:

```
\RequirePackage[autostyle]{csquotes}
```

20. Programmable bibliographies and citations:

```
\RequirePackage[
  datamodel=gzt,
  defernumbers=true,
  autolang=other
]{biblatex}
\@ifpackagelater{biblatex}{2016/01/01}{
  \ExecuteBibliographyOptions{giveninits}
}{
  \ExecuteBibliographyOptions{firstinits}
}
```

21. Extended implementation of the LaTeX array and tabular-environments:

```
\RequirePackage{array}
```

22. Publication quality tables in LaTeX:

```
\RequirePackage{booktabs}
```

23. Tabulars with adjustable-width columns:

```
\RequirePackage{tabularx}
```

24. Set of tools for authors to typeset quantities in a consistent way (automated processing of numbers and units, and control of tabular alignment of numbers):

```
% \RequirePackage{siunitx}
```

```
%
```

25. Modify skips between paragraphs:

```
\RequirePackage{nccparskip}
```

26. Construction for table cells that span more than one row of the table:

```
\RequirePackage{multirow}
```

27. Intelligent page references:

```
\RequirePackage{varioref}
```

28. Extension to amsmath package: correct various bugs/defeciencies in amsmath and useful tools for mathematical typesetting[2]:

```
\RequirePackage{mathtools}
```

29. Support for using RSFS fonts in maths:

```
\RequirePackage{rsfso}
```

30. Vector arrows:

```
\RequirePackage{esvect}
```

31. Hooks to do actions on every page or on the current page:

```
% \RequirePackage{everypage}
```

32. For translating words in LaTeX.

```
\RequirePackage{translator}
```

33. Flexible and easy interface to page dimensions:

```
\RequirePackage{geometry}
```

34. Bilingual (French and English) documents, with French as default language:

```
\RequirePackage{babel}
```

35. METAFONT and macros for Euro sign:

```
\RequirePackage{eurosym}
```

[2]The mathtools package loads amsmath, hence it's not necessary to load the latter.

Expandable checks for the current language:

```
\RequirePackage{iflang}[2007/11/11]
```

36. Tagging tables of contents:

```
⟨class⟩\RequirePackage{tableof}
```

37. Completely customisable TOCs:

```
\RequirePackage{etoc}
```

38. Subliminal refinements towards typographical perfection:

```
\RequirePackage[babel=true]{microtype}
```

39. Current date and time formatting:

```
\RequirePackage[nodayofweek]{datetime}
```

40. Customization of lists:

```
\RequirePackage[inline]{enumitem}
```

41. Execute command after the next page break:

```
\RequirePackage{afterpage}
```

42. Extension of LaTeX's color facilities:

```
\RequirePackage{xcolor}
```

43. We need to avoid some macros from few of the following packages to be added to `\@preamblecmds`:

```
⟨class | class-article⟩\cs_set_eq:NN \__gzt_orig_preamblecmds \@preamblecmds
```

Create PostScript and PDF graphics in TeX:

```
\RequirePackage{tikz}
```

Create normal/logarithmic plots in two and three dimensions:

```
\RequirePackage{pgfplots}
```

44. Environments for colored and framed text boxes, e.g. theorems:

```
\RequirePackage{tcolorbox}
```

45. A single TikZ node for the whole page:

```
\RequirePackage{tikzpagenodes}
```

46. Print page grid in background:

```
⟨class⟩\RequirePackage[foreground]{pagegrid}
```

47. Typesetting theorems (AMS style):

```
\RequirePackage{amsthm}
```

48. Extensions to theorem environments:

```
\RequirePackage{thmtools}
```

    We restore `\@preamblecmds` as it was before:

```
⟨class | class-article⟩\cs_set_eq:NN \@preamblecmds \__gzt_orig_preamblecmds
```

49. Control float placement:

```
\RequirePackage{placeins}
```

50. Hypertext marks:

```
\RequirePackage[hidelinks,hypertexnames=false]{hyperref}
```

51. A new bookmark (outline) organization for hyperref package:

```
\RequirePackage[numbered]{bookmark}
```

52. Create glossaries and lists of acronyms:

```
\RequirePackage[nowarn]{glossaries}
```

53. Intelligent cross-referencing:

```
\RequirePackage{cleveref}
```

Setings of the glossaries and acronyms.

```
\makeglossaries
\setglossarystyle{indexhypergroup}
\setacronymstyle{long-sc-short}
```

In case of pdfTeX engine, the document is by default in sans serif and makes use of the lmodern for the “ttfamily” font.

```
\sys_if_engine_pdftex:T
  {
    \renewcommand\familydefault{\sfdefault}
    \renewcommand{\ttdefault}{lmtt}
  }
```

2.5 Miscellaneous patches

We pop some commands from the `\@preamblecmds` list in order to allow `\DeclareMathOperator` to be used after the preamble (see https://tex.stackexchange.com/q/223421/18401).

```
\tl_remove_all:Nn \@preamblecmds { \do \DeclareMathOperator }
\tl_remove_all:Nn \@preamblecmds { \do \newacronym }
\tl_remove_all:Nn \@preamblecmds { \do \@declmathop }
\tl_remove_all:Nn \@preamblecmds { \do \usetikzlibrary }
```

2.6 Messages

In this section, some messages are declared for future use.

```
\msg_new:nnnn{gzt}{issue-number-needed}{Option~ `#1'~ needed!}
  {Please~ specify~ `#1=<number>',
    ~ otherwise~ `<number>'~ will~ be~ set~ to
    ~ `\int_use:N\c__gzt_first_issue_number_int'.}
\msg_new:nnnn{gzt}{unknown-choice}{Choice~ `#3'~ invalid!}
  {Please~ specify~ #1=#2.}
⟨class⟩\msg_new:nnnn{gzt}{configuration-file-missing}{File~ `\c__gzt_configuration_file_string_tl'~ missing!}
⟨class⟩  {The~ whole~ issue~ may~ not~ be~ conform~ if~ `\c__gzt_configuration_file_string_tl'~ is~ missing.}
⟨class⟩\msg_new:nnnn{gzt}{editorial-file-missing}{File~ `\c__gzt_editorial_file_string_tl'~ missing!}
⟨class⟩  {The~ whole~ issue~ requires~ the~ `\c__gzt_editorial_file_string_tl'~ file.}
```

2.7 Counters

In this section, we define some counters for future use.

\g__gzt_editors_in_chief_int
\g__gzt_articles_int
\g__gzt_questions_answers_int

The integer **\g_@@_editors_in_chief_int** will count the number of editors in chief in order to use singular or plural form of the corresponding string "Rédacteur(s) en chef".

```
\int_new:N \g__gzt_editors_in_chief_int
```

The integer **\g_@@_item_in_rubric_int** will count the number of item in a rubric in order to give a specific behavior of the first of them.

```
\int_new:N \g__gzt_item_in_rubric_int
```

The integer **\g_@@_articles_int** will count the number of articles in order to provide for each of them a unique bibliographic key.

```
\int_new:N \g__gzt_articles_int
```

The integer **\g_@@_question_int** will count the number of questions (and hence of answers) in order to provide distinguish between the first and the subsequent questions/answers of an interview, the former being likely to be typeset differently (e.g. the names of the interviewer and the interviewee may appear only in the first question/answer).

```
\int_new:N \g__gzt_question_int
```

(*End definition for* *\g__gzt_editors_in_chief_int*, *\g__gzt_articles_int*, *and* *\g__gzt_questions_answers_int*.)

2.8 Constants

In this section, we declared some constants for future use.

2.8.1 Integers

Issue numbers

\c__gzt_first_issue_number_int
\c__gzt_first_issue_year_int
\c__gzt_first_issue_month_int
\c__gzt_interval_in_months_int

The first issue number, month and year, and the interval (in months) between two consecutive issues, are declared.

```
\int_const:Nn \c__gzt_first_issue_number_int { 143 }
\int_const:Nn \c__gzt_first_issue_year_int   { 2015 }
\int_const:Nn \c__gzt_first_issue_month_int  { 1 }
\int_const:Nn \c__gzt_interval_in_months_int { 3 }
```

(*End definition for* *\c__gzt_first_issue_number_int* *and others.*)

2.8.2 Strings and keywords

We now declare some private string constants.

\c__gzt_journal_short_title_string_tl
\c__gzt_journal_title_string_tl
\c__gzt_editors_in_chief_string_tl
\c__gzt_editors_string_tl
\c__gzt_editorial_board_string_tl
\c__gzt_editorial_secretariat_string_tl
\c__gzt_phone_string_tl
\c__gzt_fax_string_tl
\c__gzt_informations_string_tl
\c__gzt_publishingdirector_string_tl
\c__gzt_issn_string_tl
\c__gzt_isbn_string_tl
\c__gzt_latexclass_string_tl
\c__gzt_font_string_tl
\c__gzt_configuration_file_string_tl
\c__gzt_cover_string_tl
\c__gzt_artistic_director_string_tl
\c__gzt_editorial_heading_string_tl
\c__gzt_toc_string_tl
\c__gzt_message_string_tl
\c__gzt_president_signatory_string_tl
\c__gzt_editorinchief_signatory_string_tl
\c__gzt_issue_bib_file_tl
\c__gzt_about_frontcover_string_tl
\c__gzt_credit_frontcover_string_tl
\c__gzt_authors_instructions_string_tl

For the journal's short and long titles.

```
\tl_const:Nn \c__gzt_journal_short_title_string_tl {Gazette}
\tl_const:Nn \c__gzt_journal_title_string_tl {
  \c__gzt_journal_short_title_string_tl{}~ de~ la~ Soci\'et\'e~ Math\'ematique~ de~ France
}
```

For the names of the underlying classes.

```
\tl_const:Nn \c__gzt_class_name_tl {gzt}
\tl_const:Nn \c__gzt_article_class_name_tl {gztarticle}
```

For the editor(s) in chief.

```
\tl_const:Nn \c__gzt_editors_in_chief_string_tl
{
  \int_compare:nNnTF { \g__gzt_editors_in_chief_int } > { 1 }
  { \c__gzt_editorsinchief_string_tl }
  { \c__gzt_editorinchief_string_tl }
}
```

For the editor in chief.

```
\tl_const:Nn \c__gzt_editorinchief_string_tl {R\'edacteur~ en~ chef }
```

For the editors in chief (plural form of the previous one).

```
\tl_const:Nn \c__gzt_editorsinchief_string_tl {R\'edacteurs~ en~ chef }
```

For the editors.

```
\tl_const:Nn \c__gzt_editors_string_tl {R\'edacteurs }
```

For the editorial board.

```
\tl_const:Nn \c__gzt_editorial_board_string_tl {Comit\'e~ de~ r\'edaction}
```

For the editorial board of special edition.

```
\tl_const:Nn \c__gzt_special_edition_editorial_board_string_tl {
  Num\'ero~ sp\'ecial~ de~ la~ Gazette~ de~ la~ Soci\'et\'e~ Math\'ematique~ de~
  France~ sous~ la~ direction~ de~ :
}
```

For the editorial_secretariat.

```
\tl_const:Nn \c__gzt_editorial_secretariat_string_tl {Secr\'etariat~ de~ r\'edaction}
```

For the phone.

```
\tl_const:Nn \c__gzt_phone_string_tl {T\'el.}
```

For the fax.

```
\tl_const:Nn \c__gzt_fax_string_tl {Fax}
```

For the informations.

```
\tl_const:Nn \c__gzt_informations_string_tl {Renseignements}
```

For the publishing director.

```
\tl_const:Nn \c__gzt_publishingdirector_string_tl {Directeur~ de~ la~ publication}
```

For the ISSN.

```
\tl_const:Nn \c__gzt_issn_string_tl {\textsc{issn}}
```

For the ISBN.

```
\tl_const:Nn \c__gzt_isbn_string_tl {\textsc{isbn}}
```

For `\LaTeX Class`.

```
\tl_const:Nn \c__gzt_latexclass_string_tl {Classe~ \LaTeX{}}
```

For `Impression`.

```
\tl_const:Nn \c__gzt_printer_string_tl {Impression}
```

For configuration file.

```
\tl_const:Nn \c__gzt_configuration_file_string_tl {gzt.cfg}
```

For the artistic director.

```
\tl_const:Nn \c__gzt_artistic_director_string_tl {Conception~ graphique}
```

For the editorial.

```
\AddToHook{begindocument/before}{
  \bool_if:NTF {\g__gzt_special_edition_bool} {
    \tl_const:Nn \c__gzt_editorial_heading_string_tl {Avant-propos}
  }{
    \tl_const:Nn \c__gzt_editorial_heading_string_tl {\'Editorial}
  }
}
```

For the editor in chief.

```
\tl_const:Nn \c__gzt_editorinchief_signatory_string_tl {
  \c__gzt_editorinchief_string_tl~ de~ la~ \c__gzt_journal_title_string_tl
}
```

For the table of contents.

```
\tl_const:Nn \c__gzt_toc_string_tl {Sommaire}
```

For the president message.

```
\tl_const:Nn \c__gzt_president_message_string_tl {Mot~ du~ pr\'esident}
```

For the president.

```
\tl_const:Nn \c__gzt_president_signatory_string_tl {pr\'esident~ de~ la~ \g__gzt_smf_short_string_tl}
```

For the date of the editor in chief's message.

```
\tl_const:Nn \c__gzt_editorinchief_message_date_string_tl {Le~ \displaydate{__gzt_editorinchief_message_date}}
```

For the date of the president's message.

```
\tl_const:Nn \c__gzt_president_message_date_string_tl {Le~ }
```

For the special editions.

```
\tl_const:Nn \c__gzt_special_edition_string_tl {\c_space_tl{}sp{\'e}cial}
\tl_const:Nn \c__gzt_long_special_edition_string_tl {Numéro\c__gzt_special_edition_string_tl}
\tl_const:Nn \c__gzt_short_special_edition_string_tl {\No{}\c__gzt_special_edition_string_tl}
```

For the front cover header text.

```
\AddToHook{begindocument/before}{
  \tl_const:Nn \c__gzt_frontcover_header_string_tl {
    \bool_if:NT {\g__gzt_special_edition_bool} {
      \text_uppercase:n {\c__gzt_long_special_edition_string_tl}

    \textendash{}
    \c_space_tl
    N°
    \bool_if:NTF {\g__gzt_special_edition_bool} {
      \c__gzt_special_edition_string_tl
      \c_space_tl
      \g__gzt_special_edition_title_tl
    }{
      \int_use:N\g__gzt_issue_number_int
    }
  }
}
```

For the name of the directory containing the editorial and the president message.

```
\tl_const:Nn \c__gzt_frontmatter_directory_string_tl {frontmatter}
```

For the name of the directory containing the 3rd and 4th cover pages.

```
\tl_const:Nn \c__gzt_backmatter_directory_string_tl {backmatter}
```

For the name of the file containing the editorial.

```
\tl_const:Nn \c__gzt_editorial_file_string_tl {\c__gzt_frontmatter_directory_string_tl/editorial}
```

For the name of the file containing the president message.

```
\tl_const:Nn \c__gzt_president_message_file_string_tl {\c__gzt_frontmatter_directory_string_tl/presidentmessage}
```

For the path to the current issue's directory.

```
\tl_const:Nn \c__gzt_issue_path_string_tl {\int_use:N \g__gzt_issue_number_int}
```

For the name and path of the images directory.

```
\tl_const:Nn \c__gzt_images_directory_string_tl {images}
\tl_const:Nn \c__gzt_issue_images_path_string_tl {
  \c__gzt_images_directory_string_tl}
```

For the name of the file containing the image of the current issue's front cover.

```
\tl_const:Nn \c__gzt_issue_frontcover_default_image_file_tl {frontcover}
```

For the name of the file containing the text of the current issue's back cover.

```
\tl_const:Nn \c__gzt_issue_backcover_text_file_string_tl {backcover}
\tl_const:Nn \c__gzt_backcover_page_file_string_tl {
  \c__gzt_backmatter_directory_string_tl/\c__gzt_issue_backcover_text_file_string_tl
}
```

For the name of the file containing the text of the special issue's abstract back cover.

```
\tl_const:Nn \c__gzt_special_edition_backcover_text_file_string_tl {abstract_backcover}
\tl_const:Nn \c__gzt_special_edition_backcover_page_file_string_tl {
  \c__gzt_backmatter_directory_string_tl/\c__gzt_special_edition_backcover_text_file_string_tl
}
```

For the name of the file of the special issue's picture back cover.

```
\tl_const:Nn \c__gzt_special_edition_backcover_picture_string_tl {picture_backcover}
\tl_const:Nn \c__gzt_special_edition_backcover_page_picture_string_tl {
  \c__gzt_backmatter_directory_string_tl/\c__gzt_special_edition_backcover_picture_string_tl
}
```

For the name of the file containing the acronyms.

```
\tl_const:Nn \c__gzt_acronyms_file_string_tl {\c__gzt_class_name_tl acronyms}
```

For authors' instructions file.

```
\tl_const:Nn \c__gzt_authors_instructions_file_extension_tl {ain}
\tl_const:Nn \c__gzt_authors_instructions_file_tl {\c_sys_jobname_str.\c__gzt_authors_instructions_file_extension_tl}
```

For the few words about the front cover.

```
\tl_const:Nn \c__gzt_about_frontcover_string_tl {\`A~ propos~ de~ la~ couverture.}
```

For the credit of the front cover.

```
\tl_const:Nn \c__gzt_credit_frontcover_string_tl {cr\'edit}
```

For the authors instructions.

```
\tl_const:Nn \c__gzt_authors_instructions_string_tl {Instructions~ aux~ auteurs}
```

For the preliminary versions sent to authors for checking.

```
\tl_const:Nn \c__gzt_preliminary_version_string_tl {
  Ce~ document~ est~ une~ {\'e}preuve~ vous~ permettant~ de~ contr{\^o}ler~ l'int{\'e}grit{\'e}~ du~

2.8.3 Booleans

We now declare the booleans that will be used.

\g__gzt_frontcover_bool
\g__gzt_inside_frontcover_bool
\g__gzt_inside_backcover_bool
\g__gzt_frontmatter_bool
\g__gzt_rubric_bool
\g__gzt_interview_rubric_bool
\g__gzt_mainmatter_bool
\g__gzt_backmatter_bool
\g__gzt_backcover_bool

The following booleans will be used to test wheter we are respectively in the front cover, in the inside front cover, in the frontmatter, in (first page of) a rubric, in the mainmatter.

```
\bool_new:N \g__gzt_frontcover_bool
\bool_new:N \g__gzt_inside_frontcover_bool
\bool_new:N \g__gzt_inside_backcover_bool
\bool_new:N \g__gzt_frontmatter_bool
\bool_new:N \g__gzt_rubric_bool
\bool_new:N \g__gzt_interview_rubric_bool
\bool_new:N \g__gzt_tellme_rubric_bool
\bool_new:N \g__gzt_rearviewmirror_rubric_bool
\bool_new:N \g__gzt_books_rubric_bool
\bool_new:N \g__gzt_mainmatter_bool
\bool_new:N \g__gzt_backmatter_bool
\bool_new:N \g__gzt_backcover_bool
\bool_new:N \g__gzt_frontcover_without_minitoc_bool
```

(*End definition for* `\g__gzt_frontcover_bool` *and others.*)

_article_with_bibliography_or_minibio_bool The following boolean will be used to test, for a given (not first) article of a rubric, whether the previous article ends with a bibliography or a minibio, in order to adjust the vertical space before its "bullet and rule".

```
\bool_new:N \g__gzt_previous_article_with_bibliography_or_minibio_bool
```

(*End definition for* `\g__gzt_previous_article_with_bibliography_or_minibio_bool`.)

\g__gzt_advertisement_bool The following boolean will be used to test wheter we are inside an advertisement page.

```
\bool_new:N \g__gzt_advertisement_bool
```

(*End definition for* `\g__gzt_advertisement_bool`.)

\g__gzt_multicols_bool The following boolean will be used to test wheter we are inside a multicol's `multicols` environment.

```
\bool_new:N \g__gzt_multicols_bool
```

(*End definition for* `\g__gzt_multicols_bool`.)

\g__gzt_refsection_bool The following boolean will be used to test wheter we are inside a biblatex's `refsection` environment.

```
\bool_new:N \g__gzt_refsection_bool
```

(*End definition for* `\g__gzt_refsection_bool`.)

2.8.4 Dimensions

Geometry of the page

\c__gzt_rubrics_abstract_width_dim
__gzt_rubrics_head_text_abstract_width_dim
zt_rubrics_head_text_no_abstract_width_dim
\l__gzt_rubrics_head_text_width_dim We declare the constant (default) dimensions of the boxes containing the abstract and head text rubrics.

```
\dim_const:Nn \c__gzt_rubrics_abstract_width_dim { 85mm}
\dim_const:Nn \c__gzt_rubrics_head_text_abstract_width_dim { 50mm}
\dim_const:Nn \c__gzt_rubrics_head_text_no_abstract_width_dim
{ \c__gzt_rubrics_abstract_width_dim + \c__gzt_rubrics_head_text_abstract_width_dim}
\dim_new:N \l__gzt_rubrics_head_text_width_dim
```

(*End definition for* `\c__gzt_rubrics_abstract_width_dim` *and others.*)

\c__gzt_offset_dim
\c__gzt_paperheight_dim
\c__gzt_paperwidth_dim
\c__gzt_topmargin_dim
\c__gzt_headsep_dim
\c__gzt_botmargin_dim
\c__gzt_innermargin_dim
\c__gzt_outermargin_dim
\c__gzt_footskip_dim
\c__gzt_header_line_width_dim
\c__gzt_header_line_yshift_dim

We first declare the default page layout constant dimensions.

```
\dim_const:Nn \c__gzt_layoutheight_dim { 270mm}
\dim_const:Nn \c__gzt_layoutwidth_dim  { 210mm}
```

We define a "printer" layout offset dimension `\c_@@_printer_layoutoffset_dim`, fixed by the printer to be 5 mm.

```
\dim_const:Nn \c__gzt_printer_layoutoffset_dim { 5mm}
```

We define a "potential" layout offset dimension which is non-zero (and the equal to "printer" layout offset dimension) iff the output is prepared for the printer (`\g_@@_for_printer_bool` flag equals true).

```
\bool_if:NTF {\g__gzt_for_printer_bool} {
  \dim_const:Nn \c__gzt_potential_layoutoffset_dim { \c__gzt_printer_layoutoffset_dim}
}{
  \dim_const:Nn \c__gzt_potential_layoutoffset_dim {\c_zero_dim}
}
```

We define a "printer" binding dimension `\c_@@_printer_bindingoffset_dim`, fixed by the printer to have different values depending on some total pages thresholds. If the binding dimension is denoted by b (and expressed in millimeters) and the total page number of the document[3] is denoted by N, the thresholds are as follows:

$$b = \begin{cases} 0 & \text{si } N < 68 \\ 3 & \text{si } 68 \leq N < 80 \\ 3.5 & \text{si } 80 \leq N < 88 \\ 3.9 & \text{si } 88 \leq N < 96 \\ 4.1 & \text{si } 96 \leq N < 104 \\ 4.5 & \text{si } 104 \leq N < 120 \\ 5 & \text{si } N \geq 120 \end{cases} \tag{1}$$

We define the thresholds:

```
\int_const:Nn \c__gzt_thresold_a_int {68}
\int_const:Nn \c__gzt_thresold_b_int {80}
\int_const:Nn \c__gzt_thresold_c_int {88}
```

[3]Except cover pages, that is the "real" total page number minus 4.

```
\int_const:Nn \c__gzt_thresold_d_int {96}
\int_const:Nn \c__gzt_thresold_e_int {104}
\int_const:Nn \c__gzt_thresold_f_int {120}
```

and the corresponding binding dimensions:

```
\dim_const:Nn \c__gzt_bindingoffset_a_dim {3mm}
\dim_const:Nn \c__gzt_bindingoffset_b_dim {3.5mm}
\dim_const:Nn \c__gzt_bindingoffset_c_dim {3.9mm}
\dim_const:Nn \c__gzt_bindingoffset_d_dim {4.1mm}
\dim_const:Nn \c__gzt_bindingoffset_e_dim {4.5mm}
\dim_const:Nn \c__gzt_bindingoffset_f_dim {5mm}
```

In order to know the total pages number of the document (store in `\g_@@_total_page_number_int`), we need first to specify the "external" document whom `.aux` file will be read.

```
\int_new:N \g__gzt_total_pages_number_int
\int_new:N \g__gzt_total_inside_pages_number_int
\zexternaldocument[self]{\jobname}
```

We extract the total pages number thanks to `\zref@extractdefault` from zref-totpages package.

```
\int_gset:Nn \g__gzt_total_pages_number_int { \zref@extractdefault{selfLastPage}{abspage}{0} }
\int_gset:Nn \g__gzt_total_inside_pages_number_int { \g__gzt_total_pages_number_int - 4 }
```

The "printer" binding dimension is now store in `\c_@@_printer_bindingoffset_dim` following eq. (1) on the preceding page.

```
\int_compare:nNnTF {\g__gzt_total_inside_pages_number_int}<{\c__gzt_thresold_a_int}
{
  \dim_const:Nn \c__gzt_printer_bindingoffset_dim { \c_zero_dim }
}{
  \int_compare:nNnTF {\g__gzt_total_inside_pages_number_int}<{\c__gzt_thresold_b_int}
  {
    \dim_const:Nn \c__gzt_printer_bindingoffset_dim { \c__gzt_bindingoffset_a_dim }
  }{
    \int_compare:nNnTF {\g__gzt_total_inside_pages_number_int}<{\c__gzt_thresold_c_int}
    {
      \dim_const:Nn \c__gzt_printer_bindingoffset_dim { \c__gzt_bindingoffset_b_dim }
    }{
```

```
      \int_compare:nNnTF {\g__gzt_total_inside_pages_number_int}<{\c__gzt_thresold_d_int}
      {
        \dim_const:Nn \c__gzt_printer_bindingoffset_dim { \c__gzt_bindingoffset_c_dim }
      }{
        \int_compare:nNnTF {\g__gzt_total_inside_pages_number_int}<{\c__gzt_thresold_e_int}
        {
          \dim_const:Nn \c__gzt_printer_bindingoffset_dim { \c__gzt_bindingoffset_d_dim }
        }{
          \int_compare:nNnTF {\g__gzt_total_inside_pages_number_int}<{\c__gzt_thresold_f_int}
          {
            \dim_const:Nn \c__gzt_printer_bindingoffset_dim { \c__gzt_bindingoffset_e_dim }
          }{
            \dim_const:Nn \c__gzt_printer_bindingoffset_dim { \c__gzt_bindingoffset_f_dim }
          }
        }
      }
    }
  }
}
```

The binding offset is applied iff the front cover is required (`frontcover` option), which implies the output is prepared for the printer, with non-zero offset (`\g_@@_for_printer_bool` flag equals true).

```
\bool_if:NTF {\g__gzt_cover_bool} {
  \dim_const:Nn \c__gzt_potential_bindingoffset_dim { \c__gzt_printer_bindingoffset_dim }
}{
  \dim_const:Nn \c__gzt_potential_bindingoffset_dim {\c_zero_dim}
}
```

The paper height is rather simple: it is always the layout height dimension plus 2 times (top and bottom) the layout offset dimension (which turns to be non-zero iff the output is prepared for the printer).

```
\dim_const:Nn \c__gzt_paperheight_dim { \c__gzt_layoutheight_dim+2\c__gzt_potential_layoutoffset_dim}
```

The paper width is more complicated: it is the layout width dimension plus:

- the “potential” binding offset (which turns to be non-zero iff only the cover page is output),
- the layout offset dimension (which turns to be non-zero iff the output is prepared for the printer):

if for the cover pages just 1 time,

if for the other pages 2 times.

```
\bool_if:NTF {\g__gzt_cover_bool} {
  \dim_const:Nn \c__gzt_paperwidth_dim  {
    \c__gzt_layoutwidth_dim
    +
    \c__gzt_potential_layoutoffset_dim
    +\c__gzt_potential_bindingoffset_dim
  }
}{
  \dim_const:Nn \c__gzt_paperwidth_dim  {
    \c__gzt_layoutwidth_dim
    +
    2
    \c__gzt_potential_layoutoffset_dim
    +\c__gzt_potential_bindingoffset_dim
  }
}
```

The image width is the layout width plus the (non-zero) printer layout offset dimension:

```
\dim_const:Nn \c__gzt_frontcover_image_width_dim {
    \c__gzt_layoutwidth_dim
    +
    \c__gzt_printer_layoutoffset_dim
}
\dim_const:Nn \c__gzt_topmargin_dim   { 31mm}
\dim_const:Nn \c__gzt_topmargin_frontcover_dim {
  \c__gzt_topmargin_dim
  + 30mm
}
\dim_const:Nn \c__gzt_topmargin_inside_cover_dim   {
  \c__gzt_topmargin_dim
  +10mm
}
\dim_const:Nn \c__gzt_topmargin_front_matter_dim   {
  \c__gzt_topmargin_inside_cover_dim
```

```
}
% \dim_const:Nn \c__gzt_topmargin_backcover_dim {
%   \c__gzt_topmargin_frontcover_dim
% }
\dim_const:Nn \c__gzt_headsep_dim     { 24mm}
\dim_const:Nn \c__gzt_headsep_frontcover_dim {
  \c__gzt_headsep_dim
  +31mm
  % -\c__gzt_potential_layoutoffset_dim
}
\dim_const:Nn \c__gzt_headsep_inside_frontcover_dim {
  \c__gzt_headsep_dim
  +7mm
}
\dim_const:Nn \c__gzt_headsep_front_matter_dim {
  \c__gzt_headsep_inside_frontcover_dim
}
\dim_const:Nn \c__gzt_headheight_dim  { \c_zero_dim }
\dim_const:Nn \c__gzt_botmargin_dim   { 30mm}
\dim_const:Nn \c__gzt_footskip_dim    { 26mm}
```

Inner margins of the initial issue (# 143) were too small. We make them definitively bigger as of 5 mm (\c_@@_extra_margin_dim) and make the outer margins smaller of the same dimension.

```
\dim_const:Nn \c__gzt_extra_margin_dim { 5mm }
\dim_const:Nn \c__gzt_innermargin_dim { 15mm - \c__gzt_potential_bindingoffset_dim + \c__gzt_extra_margin_dim}
\dim_const:Nn \c__gzt_outermargin_dim { 30mm - \c__gzt_extra_margin_dim }
\dim_const:Nn \c__gzt_inside_cover_box_width_dim { 165mm }
\dim_const:Nn \c__gzt_innermargin_inside_cover_dim {
  (\c__gzt_layoutwidth_dim - \c__gzt_inside_cover_box_width_dim)/2
  - \c__gzt_potential_bindingoffset_dim
  % + \c__gzt_adjustmargin_dim
}
\dim_const:Nn \c__gzt_outermargin_inside_cover_dim {
  (\c__gzt_layoutwidth_dim - \c__gzt_inside_cover_box_width_dim)/2
  % - \c__gzt_adjustmargin_dim
}
\dim_const:Nn \c__gzt_innermargin_backcover_dim { 10mm }
```

```
\dim_const:Nn \c__gzt_outermargin_backcover_dim { \c__gzt_innermargin_backcover_dim }
\dim_const:Nn \c__gzt_topmargin_backcover_dim { \c__gzt_innermargin_backcover_dim }

\dim_new:N \l__gzt_minibio_width_dim
```

(*End definition for* `\c__gzt_authors_photos_width_dim`.)

We set the default geometry of the page.

```
\geometry{
  papersize={\c__gzt_paperwidth_dim,\c__gzt_paperheight_dim}
}
```

We create a constant token list that contains the geometry of the front cover.

```
\bool_if:NTF {\g__gzt_cover_bool} {
  \tl_const:Nn \c__gzt_frontcover_geometry_tl {
    ,layoutsize={\c__gzt_layoutwidth_dim,\c__gzt_layoutheight_dim}
    ,layoutvoffset=\c__gzt_potential_layoutoffset_dim
    ,bindingoffset=\c__gzt_potential_bindingoffset_dim
    ,top=\c__gzt_topmargin_frontcover_dim
    ,headsep=\c__gzt_headsep_frontcover_dim
    ,headheight=\c__gzt_headheight_dim
    % ,bottom=\c_zero_dim
    ,bottom=11mm
    ,footskip=\c_zero_dim
    ,outer=\c_zero_dim
    ,inner=\c__gzt_potential_layoutoffset_dim
    ,nomarginpar
  }
}{
  \tl_const:Nn \c__gzt_frontcover_geometry_tl {
    ,layoutsize={\c__gzt_layoutwidth_dim,\c__gzt_layoutheight_dim}
    ,layoutoffset=\c__gzt_potential_layoutoffset_dim
    ,bindingoffset=\c__gzt_potential_bindingoffset_dim
    ,top=\c__gzt_topmargin_frontcover_dim
    ,headsep=\c__gzt_headsep_frontcover_dim
    ,headheight=\c__gzt_headheight_dim
    % ,bottom=\c_zero_dim
    ,bottom=11mm
    ,footskip=\c_zero_dim
    ,hmargin=\c__gzt_potential_layoutoffset_dim
    ,nomarginpar
  }
```

```
}
```

We create a constant token list that contains the geometry of the inside front and back covers.

```
\bool_if:NTF {\g__gzt_cover_bool} {
  \tl_const:Nn \c__gzt_inside_cover_geometry_tl {
    ,layoutsize={\c__gzt_layoutwidth_dim,\c__gzt_layoutheight_dim}
    ,layoutvoffset=\c__gzt_potential_layoutoffset_dim
    ,bindingoffset=\c__gzt_potential_bindingoffset_dim
    ,top=\c__gzt_topmargin_inside_cover_dim

  ,twoside=false
}
```

2.8.5 Skips

```
\skip_const:Nn \c__gzt_editorial_presidentmessage_parskip_skip { 12pt plus 2pt minus .8pt }
\skip_const:Nn \c__gzt_mainmatter_parskip_skip { 2pt plus .5pt minus .2pt }
```

2.9 Options

In this section, options used by some of the document commands defined by the class are treated.

2.9.1 Issues options

\g__gzt_issue_number_int
\g__gzt_issue_month_int
\g__gzt_issue_year_int

Some variables which are involved in options are created.

```
\int_new:N \g__gzt_issue_number_int
\int_new:N \g__gzt_issue_month_int
\int_new:N \g__gzt_issue_year_int
\tl_new:N \g__gzt_frontcover_image_options_tl
```

(*End definition for* `\g__gzt_issue_number_int`, `\g__gzt_issue_month_int`, *and* `\g__gzt_issue_year_int`.)

number
month
year

The keys options are created.

```
\keys_define:nn { gzt/issuesetup }
{
  number .int_gset:N = \g__gzt_issue_number_int,
  month .int_gset:N = \g__gzt_issue_month_int,
  year .int_gset:N = \g__gzt_issue_year_int,
```

All these options, when used, must receive a value.

```
  number .value_required:n = true,
  month .value_required:n = true,
  year .value_required:n = true,
```

If number option is not used, its initial value is set to 0. number.

```
  number .initial:n = 0,
```

The options of the front cover image could be set within \issuesetup's argument.

```
  frontcoverimageoptions .tl_gset:N = \g__gzt_frontcover_image_options_tl
}
```

(*End definition for* `number`, `month`, *and* `year`. *These functions are documented on page* **??**.)

2.9.2 Journal options

\l__gzt_journal_publisher_tl
\l__gzt_journal_address_tl
\l__gzt_journal_phone_tl
\l__gzt_journal_fax_tl
\l__gzt_journal_email_tl
\l__gzt_journal_url_tl
\l__gzt_journal_issn_tl
\l__gzt_journal_isbn_tl

Some variables which are involved in options are created.

```
\tl_new:N \l__gzt_journal_publisher_tl
\tl_new:N \l__gzt_journal_address_tl
\tl_new:N \l__gzt_journal_phone_tl
\tl_new:N \l__gzt_journal_fax_tl
\tl_new:N \l__gzt_journal_email_tl
\tl_new:N \l__gzt_journal_url_tl
\tl_new:N \l__gzt_journal_issn_tl
\tl_new:N \l__gzt_journal_isbn_tl
```

(*End definition for* `\l__gzt_journal_publisher_tl` *and others.*)

publisher
address
phone
fax
email
url
issn
isbn

The keys options are created.

```
\keys_define:nn { gzt/journalsetup }
{
  publisher .tl_set:N = \l__gzt_journal_publisher_tl,
  address .tl_set:N = \l__gzt_journal_address_tl,
  phone .tl_set:N = \l__gzt_journal_phone_tl,
  fax .tl_set:N = \l__gzt_journal_fax_tl,
```

```
  email .tl_set:N = \l__gzt_journal_email_tl,
  url .tl_set:N = \l__gzt_journal_url_tl,
  issn .tl_set:N = \l__gzt_journal_issn_tl,
  isbn .tl_set:N = \l__gzt_journal_isbn_tl,
```

All these options, when used, must receive a value.

```
  publisher .value_required:n = true,
  address .value_required:n = true,
  phone .value_required:n = true,
  fax .value_required:n = true,
  email .value_required:n = true,
  url .value_required:n = true,
  issn .value_required:n = true,
  isbn .value_required:n = true,
}
```

(*End definition for* `publisher` *and others. These functions are documented on page* **??**.)

2.9.3 Titles options

`shorttitle`
`minishorttitle`
`notintoc`

Some keys options for article's title are created:

- `shorttitle` for the possible alternative title to appear in the table of contents and in the headers,
- `minishorttitle` for the possible alternative title to appear in the mini table of contents of the front cover,
- `notintoc`, a flag that, if true, prevents the title to appear in the table of contents.

```
\keys_define:nn { gzt/title }
{
  short .tl_gset:N = \g__gzt_short_title_tl,
  minishort .tl_gset:N = \g__gzt_mini_short_title_tl,
  notintoc .bool_gset:N = \g__gzt_title_not_in_toc_bool,
```

The following options, when used, must receive a value.

```
  short .value_required:n = true,
  minishort .value_required:n = true,
}
```

(*End definition for* `shorttitle`, `minishorttitle`, *and* `notintoc`. *These functions are documented on page* **??**.)

2.9.4 Subtitles options

`shortsubtitle`
`minishortsubtitle`
`notintoc`

Some keys options for article's title are created:

- `shorttitle` for the possible alternative title to appear in the table of contents and in the headers,
- `minishorttitle` for the possible alternative title to appear in the mini table of contents of the front cover,
- `notintoc`, a flag that, if true, prevents the title to appear in the table of contents.

```
\keys_define:nn { gzt/subtitle }
{
  short .tl_gset:N = \g__gzt_short_subtitle_tl,
  minishort .tl_gset:N = \g__gzt_mini_short_subtitle_tl,
  notintoc .bool_gset:N = \g__gzt_subtitle_not_in_toc_bool,
```

The following options, when used, must receive a value.

```
  short .value_required:n = true,
  minishort .value_required:n = true,
}
```

(*End definition for* `shortsubtitle`, `minishortsubtitle`, *and* `notintoc`. *These functions are documented on page* **??**.)

2.9.5 Rubrics options

```
\keys_define:nn { gzt/rubric }
{
  abstract .tl_gset:N = \g__gzt_rubric_abstract_tl,
  title .tl_gset:N = \g__gzt_rubric_title_tl,
  pictogram .tl_gset:N = \g__gzt_rubric_pictofile_tl,
```

The following options, when used, must receive a value.

```
  abstract .value_required:n = true,
  title .value_required:n = true,
  pictogram .value_required:n = true,
}
```

2.9.6 Minitoc options

`list` A `list` (boolean) key option for `minitoc` environment is created: if true, `minitoc` should contains `\item` just as a list and the resulting list will be typeset in a special way.

```
\keys_define:nn { gzt/minitoc }
{
  list .bool_gset:N = \g__gzt_minitoc_list_bool,
  help .bool_gset:N = \g__gzt_minitoc_help_bool,
  diameter .dim_gset:N = \g__gzt_minitoc_circle_diameter_dim,
  textwidth .dim_gset:N = \g__gzt_minitoc_textwidth_dim,
  xshift .dim_gset:N = \g__gzt_minitoc_xshift_dim,
  yshift .dim_gset:N = \g__gzt_minitoc_yshift_dim,
```

The following options, when used, must receive a value.

```
  diameter .value_required:n = true,
  textwidth .value_required:n = true,
  xshift .value_required:n = true,
  yshift .value_required:n = true,
}
```

(*End definition for* `list`. *This function is documented on page* **??**.)

2.9.7 Authors options

`affiliation` `email` `minibio` `photo` `webpage` The keys options are created.

```
\keys_define:nn { gzt/authors }
{
  affiliation .tl_gset:N = \g__gzt_people_affiliation_tl,
  email .tl_gset:N = \g__gzt_people_email_tl,
  minibio .tl_gset:N = \g__gzt_people_minibio_tl,
  photo .tl_gset:N = \g__gzt_people_photo_tl,
  webpage .tl_gset:N = \g__gzt_people_webpage_tl,
```

All these options, when used, must receive a value.

```
  affiliation .value_required:n = true,
```

```
  email .value_required:n = true,
  minibio .value_required:n = true,
  photo .value_required:n = true,
  webpage .value_required:n = true,
}
```

(*End definition for* `affiliation` *and others. These functions are documented on page* ??.)

2.9.8 Interviewee options

\g__gzt_interviewee_minibio_tl
\g__gzt_interviewee_photo_tl
\g__gzt_interviewee_first_last_name_tl

Some variables which are involved in options are created.

```
\tl_new:N \g__gzt_interviewee_minibio_tl
\tl_new:N \g__gzt_interviewee_photo_tl
\tl_new:N \g__gzt_interviewee_first_last_name_tl
```

(*End definition for* `\g__gzt_interviewee_minibio_tl`, `\g__gzt_interviewee_photo_tl`, *and* `\g__gzt_interviewee_first_last_name_tl`.)

minibio
photo

The keys options are created.

```
\keys_define:nn { gzt/interviewees }
{
  minibio .tl_gset:N = \g__gzt_interviewee_minibio_tl,
  photo .tl_gset:N = \g__gzt_interviewee_photo_tl,
```

All these options, when used, must receive a value.

```
  minibio .value_required:n = true,
  photo .value_required:n = true,
}
```

(*End definition for* `minibio` *and* `photo`. *These functions are documented on page* ??.)

2.9.9 Book review options

\g__gzt_bookreview_frontcover_tl
\g__gzt_bookreview_bibkey_tl

Some variables which are involved in books reviews are created.

```
\tl_new:N \g__gzt_bookreview_frontcover_tl
\tl_new:N \g__gzt_bookreview_bibkey_tl
```

(*End definition for* `\g__gzt_bookreview_frontcover_tl` *and* `\g__gzt_bookreview_bibkey_tl`.)

`frontcover` `bibkey`

The keys options are created.

```
\keys_define:nn { gzt/bookreview }
{
  frontcover .tl_gset:N = \g__gzt_bookreview_frontcover_tl,
  bibkey .tl_gset:N = \g__gzt_bookreview_bibkey_tl,
```

All these options, when used, must receive a value.

```
  frontcover .value_required:n = true,
  bibkey .value_required:n = true,
}
```

(*End definition for* `frontcover` *and* `bibkey`. *These functions are documented on page* **??**.)

2.9.10 Book advertisement options

`\g__gzt_bookadvertisement_frontcover_tl` `\g__gzt_bookadvertisement_bibkey_tl`

Some variables which are involved in books advertisements are created.

```
\tl_new:N \g__gzt_bookadvertisement_frontcover_tl
\tl_new:N \g__gzt_bookadvertisement_bibkey_tl
```

(*End definition for* `\g__gzt_bookadvertisement_frontcover_tl` *and* `\g__gzt_bookadvertisement_bibkey_tl`.)

`frontcover` `bibkey`

The keys options are created.

```
\keys_define:nn { gzt/bookadvertisement }
{
  frontcover .tl_gset:N = \g__gzt_bookadvertisement_frontcover_tl,
  bibkey .tl_gset:N = \g__gzt_bookadvertisement_bibkey_tl,
```

All these options, when used, must receive a value.

```
  frontcover .value_required:n = true,
  bibkey .value_required:n = true,
}
```

(*End definition for* `frontcover` *and* `bibkey`. *These functions are documented on page* **??**.)

2.9.11 New theorem options

```
\tl_new:N \l__gzt_newtheorem_style_tl
\keys_define:nn { gzt/newtheorem }
{
  frenchtitle .tl_set:N = \l__gzt_newtheorem_frenchtitle_tl,
  englishtitle .tl_set:N = \l__gzt_newtheorem_englishtitle_tl,
  frenchtitle .value_required:n = true,
  englishtitle .value_required:n = true,
  style .choice:,
  style / theorem .code:n = {\tl_set:Nn \l__gzt_newtheorem_style_tl {theorem}},
  style / definition .code:n = {\tl_set:Nn \l__gzt_newtheorem_style_tl {definition}},
  style / proof .code:n = {\tl_set:Nn \l__gzt_newtheorem_style_tl {proof}},
  style / unknown .code:n =
  \msg_error:nnxxx { gzt } { unknown-choice }
  { style }
  { theorem~ or~ definition~ or~ proof }
  { \exp_not:n {#1} }
}
```

2.10 Colors

In this section, we define the colors that will be used by the class and by the source file of the logo.

⟨/class | class-article⟩

⟨∗class | class-article | class-logo⟩

```
\definecolorset{cmyk}{__gzt_}{_color}{
  generic_dark,1,.60,.10,0; % kind of blue (!)
  light_generic_dark,1,.35,0,0 % kind of blue (!), light
}
\colorlet{__gzt_generic_light_color}{black!50}
\colorlet{__gzt_dark_generic_light_color}{black!60}
\colorlet{__gzt_description_label_light_color}{__gzt_dark_generic_light_color}
\colorlet{__gzt_minitoc_color}{__gzt_generic_light_color}
\colorlet{__gzt_cover_itemize_label_color}{__gzt_light_generic_dark_color}
\colorlet{__gzt_default_text_color}{black}
\colorlet{__gzt_head_text_color}{black!65}
```

```
\colorlet{__gzt_rubric_head_text_color}{__gzt_head_text_color}
\colorlet{__gzt_bibliography_minibios_acknowledgements_bg_color}{black!10}
\colorlet{__gzt_headrule_color}{__gzt_generic_light_color!65}
\colorlet{__gzt_circlerule_color}{__gzt_generic_dark_color!65}
\colorlet{__gzt_frontmatter_text_color}{black!75}
\colorlet{__gzt_people_color}{__gzt_generic_dark_color}
\colorlet{__gzt_arrayrule_color}{__gzt_generic_dark_color}
\colorlet{__gzt_acknowledgements_color}{__gzt_generic_dark_color}
\colorlet{__gzt_question_color}{__gzt_generic_dark_color}
\colorlet{__gzt_boxed_issue_number_bg_color}{__gzt_generic_dark_color}
\colorlet{__gzt_rule_in_toc_color}{__gzt_generic_dark_color}
\colorlet{__gzt_rubric_in_toc_color}{__gzt_generic_dark_color}
\colorlet{__gzt_article_in_toc_color}{__gzt_frontmatter_text_color}
\colorlet{__gzt_rubric_title_color}{__gzt_generic_light_color}
\colorlet{__gzt_article_title_color}{__gzt_generic_dark_color}
\colorlet{__gzt_section_color}{__gzt_generic_dark_color}
\colorlet{__gzt_subsection_color}{__gzt_generic_dark_color!90}
\colorlet{__gzt_subsubsection_color}{__gzt_generic_dark_color!80}
\colorlet{__gzt_rubric_abstract_color}{__gzt_generic_dark_color}
\colorlet{__gzt_article_abstract_color}{__gzt_generic_light_color}
\colorlet{__gzt_dotfill_color}{__gzt_generic_dark_color}
\colorlet{__gzt_about_frontcover_title_color}{__gzt_generic_dark_color}
\colorlet{__gzt_reflected_text_color}{__gzt_generic_dark_color}
\colorlet{__gzt_inside_frontcover_frame_bg_color}{__gzt_generic_dark_color!8}
\colorlet{__gzt_inside_frontcover_frame_title_color}{__gzt_generic_dark_color}
\colorlet{__gzt_footer_bg_color}{black!10}
\colorlet{__gzt_float_title_color}{__gzt_generic_dark_color}
\colorlet{__gzt_float_title_bg_color}{__gzt_generic_dark_color!10}
\colorlet{__gzt_float_frame_color}{__gzt_generic_dark_color!20}
\colorlet{__gzt_chapter_color}{__gzt_generic_dark_color}
\colorlet{__gzt_smf_number_color}{__gzt_generic_dark_color}
\colorlet{__gzt_date_color}{__gzt_generic_light_color}
\colorlet{__gzt_table_head_color}{__gzt_generic_dark_color!25}
\colorlet{__gzt_book_review_frame_bg_color}{__gzt_generic_dark_color!8}
\colorlet{__gzt_book_advertisement_bg_color}{white}
\colorlet{__gzt_book_advertisement_frame_color}{__gzt_generic_dark_color}
\colorlet{__gzt_default_cover_color}{white}
```

⟨/class | class-article | class-logo⟩

⟨∗class | class-article⟩

2.11 Miscellaneous patches

We patch the biblatex's `refsection` environment definition by adding a flag that will be used to test wheter we are inside such an environment or not.

```
\AddToHook{env/multicols/begin}{
  \bool_gset_true:N \g__gzt_multicols_bool
}
\AddToHook{env/multicols/end}{
  \bool_gset_false:N \g__gzt_multicols_bool
}
\AddToHook{env/refsection/begin}{
  \bool_gset_true:N \g__gzt_refsection_bool
}
\AddToHook{env/refsection/end}{
  \bool_gset_false:N \g__gzt_refsection_bool
}
```

2.12 Miscellaneous token lists

We define a token list that will display the font of footer at the right size.

```
\tl_const:Nn \c__gzt_footer_size_font_tl {
  \fontsize{\c__gzt_footer_height_font_dim}{\c_zero_dim}\selectfont
}
```

We define some token lists for the long and short forms of SMF.

```
\tl_new:N \g__gzt_smf_short_string_tl
\tl_new:N \g__gzt_smf_string_tl
\tl_gset:Nn \g__gzt_smf_short_string_tl {
  % \cs_if_exist:cTF {texorpdfstring}
  % {
    \texorpdfstring{\c__gzt_smf_short_string_tl}{\c__gzt_smf_short_pdf_string_tl}
```

```
  % }{
  %   \c__gzt_smf_short_pdf_string_tl
  % }
}
\tl_gset:Nn \g__gzt_smf_string_tl {
  % \cs_if_exist:cTF {texorpdfstring}
  % {
  % \texorpdfstring{Soci\'et\'e~ Math\'ematique~ de~ France}{\c__gzt_smf_string_tl}
  \c__gzt_smf_string_tl
  % }{
  %   \acrlong*{smf}
  % }
}
```

We define some token lists for the long and short forms of *Gazette*.

```
\tl_new:N \l__gzt_gzt_short_string_tl
\tl_new:N \l__gzt_gzt_string_tl
\tl_set:Nn \l__gzt_gzt_short_string_tl {
  \cs_if_exist:cTF {texorpdfstring}
  {
    \texorpdfstring{\emph{\c__gzt_journal_short_title_string_tl}}{\c__gzt_journal_short_title_string_tl}
  }{

2.13 Functions for specifiying the people involved in the journal

For this, and thanks to datatool package, we create a database of "people" involved in the journal.

```
\DTLnewdb{people}
```

Then we create the internal `\_@@_people` function that let us populate the `_@@_people` database. Each people will be identified by some identifiers: speciality (optional), firstname, lastname, affiliation, email, role.

```

      \hbox{}
    }
  }
}
```

2.21 User level commands

Here, we gather all the user level (public) commands.

2.21.1 Populating the people involved in the journal

\editorinchief
\editor
\president
\classdesigner
\fontdesigner
\classmaintainer
\graphicdesigner

We define some document-level commands that let the user specify respectively the editor(s) in chief, the editors, the (SMF) president, the class designer and maintainer(s), and the graphic designer.

For the editor(s) in chief, we increment the `\g_@@_editors_in_chief_int` counter in order to use singular or plural form of the corresponding string "Rédacteur(s) en chef".

```
\NewDocumentCommand \editorinchief {ommm}
{
  \int_incr:N \g__gzt_editors_in_chief_int
  \__gzt_people:nnnnnnnn {#2}{#3}{#4}{}{}{#1}{editorinchief}{}
}
\NewDocumentCommand \editor {ommm}
{
  \__gzt_people:nnnnnnnn {#2}{#3}{#4}{}{}{#1}{editor}{}
}

\NewDocumentCommand \president {ommm}
{
  \__gzt_people:nnnnnnnn {#2}{#3}{#4}{}{}{#1}{president}{}
}
```

```
\NewDocumentCommand \classdesigner {ommm}
{
  \__gzt_people:nnnnnnnn {#2}{#3}{#4}{}{}{#1}{classdesigner}{}
}
\NewDocumentCommand \classmaintainer {ommm}
{
  \__gzt_people:nnnnnnnn {#2}{#3}{#4}{}{}{#1}{classmaintainer}{}
}
\NewDocumentCommand \fontdesigner {ommm}
{
  \__gzt_people:nnnnnnnn {#2}{#3}{#4}{}{}{#1}{fontdesigner}{}
}
\NewDocumentCommand \graphicdesigner {ommm}
{
  \__gzt_people:nnnnnnnn {#2}{#3}{#4}{}{}{#1}{graphicdesigner}{}
}
\NewDocumentCommand \secretary {ommm}
{
  \__gzt_people:nnnnnnnn {#2}{#3}{#4}{}{}{#1}{secretary}{}
}
% \NewDocumentCommand \frontcovercredit {om}
% {
%   \__gzt_people:nnnnnnnn {#2}{}{}{}{}{#1}{frontcovercredit}{}
% }
```

(*End definition for* `\editorinchief` *and others. These functions are documented on page* **??**.)

2.21.2 Issue setup

`\issuesetup` We define the command that lets the user specify the issue setup.

```
\NewDocumentCommand \issuesetup { m } {
```

Its keys are set (only `number`, `month` and `year` are relevant here).

```
  \keys_set:nn { gzt/issuesetup } {frontcoverimageoptions={width=\c__gzt_frontcover_image_width_dim},#1}
```

We use here the fact that, if the `number`, `month` or `year` options are not used, their corresponding `\g_@@_issue_number_int`, `\g_@@_issue_month_int` or `\g_@@_issue_year_int` variables are equal to 0 (< 1).

First, if number is not used, its \g_@@_issue_number_int variable is set to \c_@@_first_issue_number_int[4] and a warning is emitted.

```
\int_compare:nNnT {\g__gzt_issue_number_int}<{1}
{
  \int_set:Nn \g__gzt_issue_number_int { \c__gzt_first_issue_number_int }
  \msg_warning:nnn{gzt}{issue-number-needed}{number}
}
```

If not specified as \issuesetup's key-value options, issue's month and year are computed from issue number (which defaults to \c_@@_first_issue_month_int).

First, if month or year option is not used (one of the previous variables is 0 hence their product is 0 (< 1)), we compute the issue age in months, useful for both month and year computation.

```
\int_compare:nNnT {\g__gzt_issue_month_int * \g__gzt_issue_year_int}<{1}
{
  \int_new:N \g__gzt_issue_age_in_months_int
  \int_gset:Nn \g__gzt_issue_age_in_months_int
  {
    \c__gzt_first_issue_month_int
    + \c__gzt_interval_in_months_int
    * ( \int_use:N \g__gzt_issue_number_int - \c__gzt_first_issue_number_int )
  }
}
```

If the month is not used, we replace \g_@@_issue_month_int ($= 0$) by its computed value from the issue number.

```
\int_compare:nNnT {\g__gzt_issue_month_int}<{1}
{
  \int_gset:Nn \g__gzt_issue_month_int
  {
    \int_mod:nn { \g__gzt_issue_age_in_months_int } { 12 }
  }
}
```

If the year is not used, we replace \g_@@_issue_year_int ($= 0$) by its computed value from the issue number.

[4] The number of the first Gazette's issue using the present class.

```
  \int_compare:nNnT {\g__gzt_issue_year_int}<{1}
  {
    \int_new:N \g__gzt_issue_age_in_years_int
    \int_gset:Nn \g__gzt_issue_age_in_years_int
    {
      \int_div_truncate:nn { \g__gzt_issue_age_in_months_int } { 12 }
    }
    \int_gset:Nn \g__gzt_issue_year_int
    {
      \g__gzt_issue_age_in_years_int + \c__gzt_first_issue_year_int
    }
  }
}
```

(*End definition for* `\issuesetup`*. This function is documented on page* **??**.)

2.21.3 Special edition setup

`\specialeditionsetup` We define the command that lets the user specify the special edition setup.

```
\NewDocumentCommand \specialeditionsetup { m } {
  \bool_gset_true:N \g__gzt_special_edition_bool
  \bool_gset_true:N \g__gzt_frontcover_without_minitoc_bool
  \keys_set:nn { gzt/specialedition } {#1}
}
```

(*End definition for* `\specialeditionsetup`*. This function is documented on page* **??**.)

2.21.4 Moral report setup

`\moralreportsetup` We define the command that lets the user specify the moral report setup.

```
\NewDocumentCommand \moralreportsetup { m } {
  \bool_gset_true:N \g__gzt_moral_report_bool
  \bool_gset_true:N \g__gzt_frontcover_without_minitoc_bool
  \keys_set:nn { gzt/moralreport } {#1}
}
```

(*End definition for* `\moralreportsetup`*. This function is documented on page* **??**.)

2.21.5 Journal setup

\journalsetup We define the command that lets the user specify the journal setup. This setup is likely to be rarely changed.

```
\NewDocumentCommand \journalsetup { m } {
```

Its keys are set (only publisher, address, phone, fax, email, url and issn are relevant here).

```
  \keys_set:nn { gzt/journalsetup } { #1 }
}
```

(*End definition for* \journalsetup*. This function is documented on page* ??.)

2.21.6 Date of the president's message

\date We redefine the \date for the date of the president's message. It takes 3 arguments, each of them being a number: the day, the month and the year.

```
\RenewDocumentCommand \date { mmm } {
  \newdate{__gzt_president_message_date}{#1}{#2}{#3}
}
```

(*End definition for* \date*. This function is documented on page* ??.)

2.21.7 Interviews

\interviewee

```
% \NewDocumentCommand\interviewer { o m } {
% }
\NewDocumentCommand \interviewee { om } {
  \tl_if_empty:nT \g__gzt_title_tl {
    \tl_gset:Nn \g__gzt_title_tl {
      \c__gzt_interview_title_string_tl
      \DeclareNameAlias{labelname}{default}\citeauthor{\c__gzt_issue_bib_key_tl -art-\int_use:N
        \g__gzt_articles_int}
    }
  }
  \IfNoValueF {#1}
```

```
  {
    \keys_set:nn { gzt/interviewees } { #1 }
  }
  \tl_set:Nn \l__gzt_people_first_last_name_tl {#2}
  \__gzt_people:nVVVVnxV
  {#2}
  {\g__gzt_people_affiliation_tl}
  {\g__gzt_people_email_tl}
  {\g__gzt_people_minibio_tl}
  {\g__gzt_people_photo_tl}
  {}
  {interviewee-art-\int_use:N \g__gzt_articles_int}
  {}
  % \maketitle
}
```

(*End definition for* `\interviewee`*. This function is documented on page* ??.)

2.21.8 Miscellaneous

`\academicsignature`

```
\NewDocumentCommand \academicsignature { m } {
  \__gzt_display_academic_signature:n {#1}
}
```

(*End definition for* `\academicsignature`*. This function is documented on page* ??.)

2.22 Definition of the footer of the pages

`__gzt_date`
`\l__gzt_uppercased_date_format`

Thanks to datetime package, we create the new date `@@_date` and define the date format to be used in the journal. As this date has to be displayed uppercased, we first define a function that displays uppercased months.

```
\cs_new_protected:Nn \__gzt_uppercased_monthname_french:n
{
  \@orgargctr=#1\relax
  \ifcase\@orgargctr
  \PackageError{datetime}{Invalid~ month~ number~ \the\@orgargctr}{
```

```
    Month~ numbers~ should~ go~ from~ 1~ (janvier)~ to~ 12~ (decembre)}
  \or JANVIER
  \or F\'EVRIER
  \or MARS
  \or AVRIL
  \or MAI
  \or JUIN
  \or JUILLET
  \or AO\^UT
  \or SEPTEMBRE
  \or OCTOBRE
  \or NOVEMBRE
  \or D\'ECEMBRE
  \else
  \PackageError{datetime}{Invalid~ month~ number~ \the\@orgargctr}{
    Month~ numbers~ should~ go~ from~ 1~ (janvier)~ to~ 12~ (decembre)}
  \fi
}
\newdate{__gzt_date}
  {1}
  {\int_use:N \g__gzt_issue_month_int}
  {\int_use:N \g__gzt_issue_year_int}
\newdateformat{l__gzt_uppercased_date_format}{
  \__gzt_uppercased_monthname_french:n {\THEMONTH}~ \THEYEAR
}
```

(*End definition for* `__gzt_date` *and* `\l__gzt_uppercased_date_format`.)

2.23 (Re)Definition of document commands that identify the article

The names of the authors of the different articles will appear at several places, and notably in the table of contents where first and middle names have to be rendered as initials. Because automatically rendering initials is a complex task already provided by biblatex package, we will create a `.bib` file containing `article` entries for each article of the *Gazette* journal.

This can be done only at the beginning of the document, in order to know the characteristics of the current issue.

```
\AddToHook{begindocument}{
```

We first create a token list containing the date of the current issue formated as required by biblatex (the month issue needs a leading zero if it is < 10).

```
\tl_new:N \g__gzt_bib_issue_date_tl
\tl_gset:Nn \g__gzt_bib_issue_date_tl {
  \int_use:N \g__gzt_issue_year_int-
  \int_compare:nNnT {\g__gzt_issue_month_int}<{10}
  {
    0
  }
  \int_use:N \g__gzt_issue_month_int
}
```

We will populate the bibiliographic file of the current issue with the current issue (as `@periodical` entry type).

```
  \iow_now:Nx \g__gzt_bib_out_iow {
    @periodical{\c__gzt_issue_bib_key_tl,\iow_newline:
      issuetitle   = {\exp_not:f\c__gzt_journal_title_string_tl},\iow_newline:
      date         = {\g__gzt_bib_issue_date_tl},\iow_newline:
      number       = \int_use:N \g__gzt_issue_number_int,\iow_newline:
      % issn         = {\l__gzt_journal_issn_tl},\iow_newline:
      options      = {skipbib}\iow_newline:
    }
    \iow_newline:
  }
}
```

`\title` The command for article's title is redefined: the full "article's title" is store in `\g_@@_title_tl` for later use.

`\g__gzt_title_tl`

```
\tl_new:N \g__gzt_title_tl
\RenewDocumentCommand \title { o m } {
```

We increment the `\g_@@_articles_int` integer that counts the number of articles in order to provide for each of them a unique bibliographic key.

```
  \int_gincr:N \g__gzt_articles_int
  \tl_gclear:N \g__gzt_short_title_tl
  \tl_gclear:N \g__gzt_short_subtitle_tl
```

```
  \bool_gset_false:N \g__gzt_title_not_in_toc_bool
  \IfNoValueF {#1}
  {
    \keys_set:nn { gzt/title } { #1 }
  }
  \tl_gset:Nn \g__gzt_title_tl {#2}
  \bool_if:nT \g__gzt_tellme_rubric_bool
  {
    \tl_put_left:Nx \g__gzt_title_tl {\c__gzt_tellme_extra_title_string_tl}
  }
  \tl_if_empty:NT \g__gzt_short_title_tl {
    \tl_gset_eq:NN \g__gzt_short_title_tl \g__gzt_title_tl
  }
}
```

(*End definition for* `\title` *and* `\g__gzt_title_tl`*. This function is documented on page* **??**.)

`\subtitle` The command for article's subtitle is redefined: the full and short "article's subtitles" are store in `\g_@@_subtitle_tl` and `\g_@@_short_subtitle_tl` for later use.

`\g__gzt_subtitle_tl`

```
\tl_new:N \g__gzt_subtitle_tl
\NewDocumentCommand \subtitle { o m } {
  \bool_gset_false:N \g__gzt_subtitle_not_in_toc_bool
  \IfNoValueF {#1}
  {
    \keys_set:nn { gzt/subtitle } { #1 }
  }
  \tl_gset:Nn \g__gzt_subtitle_tl {#2}
  \tl_if_empty:NT \g__gzt_short_subtitle_tl {
    \tl_gset_eq:NN \g__gzt_short_subtitle_tl \g__gzt_subtitle_tl
  }
}
```

(*End definition for* `\subtitle` *and* `\g__gzt_subtitle_tl`*. This function is documented on page* **??**.)

`\author` The command for article's author (including its affiliation) is redefined.

```
\RenewDocumentCommand \author { o m } {
  \IfNoValueF {#1}
  {
    \keys_set:nn { gzt/authors } { #1 }
  }
  \tl_gset:Nn \l__gzt_people_first_last_name_tl {#2}
  \__gzt_people:nVVVVnxV
  {#2}
  {\g__gzt_people_affiliation_tl}
  {\g__gzt_people_email_tl}
  {\g__gzt_people_minibio_tl}
  {\g__gzt_people_photo_tl}
  {}
  {author-art-\int_use:N \g__gzt_articles_int}
  {\g__gzt_people_webpage_tl}
}
```

(*End definition for* `\author`. *This function is documented on page* **??**.)

We create a stream in order to write a bibliographic file

```
\iow_new:N \g__gzt_bib_out_iow
\ior_new:N \g__gzt_bib_out_ior
\tl_new:N \g__gzt_bib_out_tl
\file_if_exist:nTF { \c__gzt_issue_bib_path_string_tl }
{
  \ior_open:Nn \g__gzt_bib_out_ior { \c__gzt_issue_bib_path_string_tl }
  \ior_str_map_inline:Nn \g__gzt_bib_out_ior
  { \tl_gput_right:Nn \g__gzt_bib_out_tl {#1 \par } }
  \ior_close:N \g__gzt_bib_out_ior
}{
  \typeout{no file! rerun}
}
\iow_open:Nn \g__gzt_bib_out_iow { \c__gzt_issue_bib_path_string_tl }
```

`abstract` The environment for article's abstract or, more precisely, for its lead paragraph ("chapô" in French typography) is (re)defined.

```
\tl_new:N \g__gzt_abstract_body_tl
```

```
\NewDocumentEnvironment{abstract}{}
  {\CollectAbstract}
  {\endCollectAbstract}
\NewEnviron{CollectAbstract}
  {
    \tl_gset_eq:NN \g__gzt_abstract_body_tl \BODY
  }
```

2.24 Definition of a private main matter switch

A private `\_@@_mainmatter_switch_tl` switch is defined in order to automatically insert some settings.

```
\tl_new:N \g__gzt_mainmatter_switch_tl
\tl_gset:Nn \g__gzt_mainmatter_switch_tl {
  \bool_gset_false:N \g__gzt_frontmatter_bool
  \bool_gset_true:N \g__gzt_mainmatter_bool
  \SetParskip{\c__gzt_mainmatter_parskip_skip}
  \pagestyle{__gzt_mainmatter_ps}
}
```

```
\tl_new:N \l__gzt_article_acknowledgements_tl
\cs_new_protected:Nn \__gzt_article_acknowledgements:n
{
  \tl_set:Nn \l__gzt_article_acknowledgements_tl { #1 }
}
```

⟨/class | class-article⟩

⟨∗class⟩

`\g__gzt_about_frontcover` We define the internal function than let us tell a few words about the front cover.

```
\tl_new:N \g__gzt_about_frontcover_tl
\bool_new:N \g__gzt_credit_frontcover_bool
\tl_new:N \g__gzt_about_frontcover_string_tl

We suppress any spurious space in case of lack of % at the end of the public macros built on `\_@@_rubric`:

```
  \ignorespaces
```

End of the definition of the private command `\_@@_rubric`:

```
}
```

(*End definition for* `\__gzt_rubric`.)

⟨/class⟩

⟨∗class | class-article⟩

We create a command for local (to a given article) tables of contents

```
\cs_new_protected:Nn \__gzt_display_localtoc:
{
  \etocsettocstyle{\section*{\contentsname}}{}
  \etocsetstyle {section}
  {}
  {\leavevmode\leftskip 0cm\relax}
  {\bfseries\normalsize\makebox[.6cm][l]{\etocnumber}
    \etocname\nobreak\hfill\nobreak
    \makebox[.5cm][r]{
      \etocpage
    }
    \par
  }
  {\medskip}
  \localtableofcontentswithrelativedepth{+1}
}
\NewDocumentCommand \gztlocaltableofcontents {}
{
  \__gzt_display_localtoc: {}
}
```

We create two token lists that will contain:

1. the unique bibliographic key,
2. the `author` value of the bibliographic entry,

of the current article.

```
\tl_new:N \g__gzt_article_bib_key_tl
```

```

%     \citeinterviewee{\g__gzt_article_bib_key_tl}
%   }
% }
```

In the following `\maketitle` document level macro, we will need to display the list the authors of the current article, not as a comma separated list (default `\citeauthor` biblatex's macro behavior), but as an itemized list. For this, we create the `\_@@_itemized_citeauthor` internal function that will make use of `\citeauthor` where `\multinamedelim` and `\finalnamedelim` will be patched into `\item`. As we don't want to globally alter the behavior of these macros, we first store their original meanings in some private control sequence:

```
\cs_set_eq:NN \__gzt_orig_multinamedelim \multinamedelim
\cs_set_eq:NN \__gzt_orig_finalnamedelim \finalnamedelim
\cs_new_protected:Nn \__gzt_itemized_citeauthor:n
{
  \cs_set_eq:NN \multinamedelim \item
  \cs_set_eq:NN \finalnamedelim \multinamedelim
  \AtNextCitekey{\defcounter{maxnames}{100}}
  \begin{itemize}[label=\textbullet,noitemsep]
  \item \citeauthor{#1}
  \end{itemize}
  \cs_set_eq:NN \multinamedelim \__gzt_orig_multinamedelim
  \cs_set_eq:NN \finalnamedelim \__gzt_orig_finalnamedelim
}
```

We declare two token list which will used in the next (re)definition.

```
\tl_new:N \l__gzt_bullet_and_rule_tl
```

```
\tl_new:N \l__gzt_authors_box_tl
\tl_new:N \l__gzt_abstract_box_tl
\tl_new:N \l__gzt_bullet_and_rule_odd_tl
\tl_new:N \l__gzt_bullet_and_rule_even_tl
\tl_new:N \l__gzt_title_box_tl
%
```

`\maketitle` The command that "makes" the title is redefined.

```
\RenewDocumentCommand \maketitle { s } {
```

We force all the previous floats to be processed before a new article starts (this is already done in `bibliography_minibiographies_acknowledgements` environment but is repeated here if what is before provides floats but neither bibliography, CV nor acknowledgements).

```
  \FloatBarrier
```

We increment the item number in the current rubric.

```
\int_gincr:N \g__gzt_item_in_rubric_int
```

We restore the original length for `\parindent` that has been set to zero in a possible previous "Interview" rubric.

```
\dim_set_eq:NN \parindent \c__gzt_original_parindent_dim
```

We reset all acronyms entries.

```
\glsresetall
```

We reset to zero some counters at each new article.

```

```

We store the unique bibliographic key of the current article in the `\g_@@_article_bib_key_tl` token list.

```
\tl_gset:Nn \g__gzt_article_bib_key_tl {
  \c__gzt_issue_bib_key_tl
  -art-
  \int_use:N \g__gzt_articles_int
}
```

We will populate the bibiliographic file of the current issue with the current article (title, author(s) and a fixed part giving by the issue number, journal title and date).

Then, we iterate through each row of the authors database in order to get a token list containing the (list of the) author(s) of the current article formated as required by biblatex (“Last1, First1 [and Last2, First2 [and ...]]”).

```
\DTLforeach*[\DTLiseq{\l__gzt_people_role_tl}{author-art-\int_use:N \g__gzt_articles_int}]{people}{
  \l__gzt_people_first_last_name_tl=first-last-name
  ,\l__gzt_people_role_tl=role
}{
  \tl_if_in:NnT \l__gzt_people_role_tl { author } {
    \DTLiffirstrow{
      \tl_put_right:Nx
      \l__gzt_people_first_last_names_tl
```

```
      {\exp_not:V\l__gzt_people_first_last_name_tl}
    }{
      \tl_put_right:Nx
      \l__gzt_people_first_last_names_tl
      {~ and~ \exp_not:V\l__gzt_people_first_last_name_tl}
    }
  }
}
\DTLforeach*[\DTLiseq{\l__gzt_people_role_tl}{interviewee-art-\int_use:N \g__gzt_articles_int}]{people}{
  \l__gzt_people_first_last_name_tl=first-last-name
  ,\l__gzt_people_role_tl=role
}{
  \tl_if_in:NnT \l__gzt_people_role_tl { interviewee } {
    \DTLiffirstrow{
      \tl_put_right:Nx
      \l__gzt_people_first_last_names_tl
      {\exp_not:V\l__gzt_people_first_last_name_tl}
    }{
      \tl_put_right:Nx
      \l__gzt_people_first_last_names_tl
      {~ and~ \exp_not:V\l__gzt_people_first_last_name_tl}
    }
  }
}
```

We now populate the bibiliographic file.

```
\tl_if_empty:NF \g__gzt_title_tl {

{
  \bool_if:NF {\g__gzt_for_authors_bool} {
    \__gzt_display_president_message: {}
  }
}
```

2.30 Chapter, sections, etc. customization

Thanks to titlesec package, the chapter, section, subsection and subsubsection formats are customized.

Chapter has a “block” shape, is typeset in huge and bold face, without any number, with a null distance between the (missing)

number and the title, with a title in enforced lower case but small caps.

```
\titleformat{\chapter}
[block]
{\Huge\bfseries}
{}
{\c_zero_dim}
{\scshape}
```

Section has a "frame" shape, is typeset in bold face, left justified and in color, with number typeset in huge, with a negative distance between the number and the title, with a title in 12.5pt.

```
\titleformat{\section}
{
  \raggedright
  \bfseries
  \color{__gzt_section_color}
}
{\fontsize{20}{15}\selectfont\thesection.\enspace}
{-3pt}
{\fontsize{13}{15}\selectfont}
```

Subsection:

```
\titleformat{\subsection}
% [frame]
{
  \fontsize{11}{16}\selectfont
  \bfseries
  \color{__gzt_subsection_color}
}
{\thesubsection\ \textendash{}\ }
{\c_zero_dim}
{}
```

Subsubsection:

```
\titleformat{\subsubsection}
% [frame]
{
```

```
      \fontsize{11}{16}\selectfont
      \bfseries
      \color{__gzt_subsubsection_color}
    }
    {}
    {\c_zero_dim}
    {}
```

2.31 First pages

At begin of the document, we automatically :

- set the graphic path,
- set the page grid if the corresponding option has been passed,
- display the front cover and the inside front cover.

```
\AddToHook{begindocument}{
  \graphicspath{{\c__gzt_issue_images_path_string_tl//}{../\c__gzt_issue_images_path_string_tl//}}
  % \glsdisablehyper
  \g__gzt_mainmatter_switch_tl
  % \bool_gset_false:N \g__gzt_frontmatter_bool
  % \bool_gset_true:N \g__gzt_mainmatter_bool
  % \SetParskip{\c__gzt_mainmatter_parskip_skip}
  % \pagestyle{__gzt_mainmatter_ps}
  \exp_after:wN\newgeometry\exp_after:wN{\c__gzt_main_geometry_tl}
}
```

⟨/class | class-article⟩

⟨*class⟩

```
\AddToHook{begindocument}{

⟨∗class | class-article⟩

2.32 Page styles

Thanks to titleps package loaded by titlesec's `pagestyles` option, we define some page styles.

2.32.1 Common tools

Here, we define some tools shared by sevral pages styles.

The background footer:

```
\tl_new:N \g__gzt_background_footer_tl
\tl_gset:Nn \g__gzt_background_footer_tl {
  \draw [__gzt_footer_bg_color,fill]
  (current~ page.south~ west)
  rectangle ([yshift=\c__gzt_footer_background_height_dim]current~ page.south~ east)
  ;
}
```

The frontmatter head text:

```
\tl_new:N \l__gzt_frontmatter_head_text_tl
\tl_set:Nn \l__gzt_frontmatter_head_text_tl {
  \bool_if:NTF {\g__gzt_special_edition_bool} {
    \g__gzt_special_edition_title_tl
  }{
    \includegraphics[scale=1]{gzt-logo}
  }
}
```

The rubric head text:

```
% \tl_new:N \l__gzt_rubric_head_text_tl
% \tl_set:Nn \l__gzt_rubric_head_text_tl {
%   \color{__gzt_rubric_head_text_color}
%   \fontsize{20}{20}\fontseries{bx}\fontshape{sc}\selectfont
%   \g__gzt_rubric_title_tl
% }
```

The frontmatter page head rule:

```
\tl_new:N \g__gzt_frontmatter_page_headrule_tl
\tl_gset:Nn \g__gzt_frontmatter_page_headrule_tl {
  \draw [__gzt_headrule_color,line~ width=\c__gzt_header_line_width_dim]
  ([yshift=\c__gzt_header_line_yshift_dim]current~ page~ header~ area.south~ west -| current~ page.north~ west)
  --
  ([yshift=\c__gzt_header_line_yshift_dim]current~ page~ header~ area.south~ east -| current~ page.north~ east)
  ;
}
```

The frontmatter page head text:

```
\tl_new:N \g__gzt_frontmatter_headtext_tl
\tl_gset:Nn \g__gzt_frontmatter_headtext_tl {
  \mbox{}
  \checkoddpage
  \ifoddpage
    \node[
    anchor=north~ east,
    align=center,
    fill=white,
    inner~ xsep=3.5mm,
    outer~ sep=\c_zero_dim,
    ] at
    ([
    xshift=\c__gzt_frontmatter_headtext_o_xshift_dim,
    yshift=\c__gzt_frontmatter_headtext_yshift_dim
    ]current~ page.north~ east) {
      \Large
      \bool_if:NT {\g__gzt_special_edition_bool} {
        \c__gzt_short_special_edition_string_tl
        \c_space_tl
      }
      \l__gzt_frontmatter_head_text_tl
    }
    ;
  \else
```

```
    \node[
    anchor=north~ west,
    align=center,
    fill=white,
    inner~ xsep=3.5mm,
    outer~ sep=\c_zero_dim,
    ] at
    ([
    xshift=\c__gzt_frontmatter_headtext_e_xshift_dim,
    yshift=\c__gzt_frontmatter_headtext_yshift_dim
    ]current~ page.north~ west) {
      \Large
      \bool_if:NT {\g__gzt_special_edition_bool} {
        \c__gzt_short_special_edition_string_tl
        \c_space_tl
      }
      \l__gzt_frontmatter_head_text_tl
    }
    ;
  \fi
}
```

The mainmatter odd page head rule:

```
\tl_new:N \g__gzt_mainmatter_oddpage_headrule_tl
\tl_gset:Nn \g__gzt_mainmatter_oddpage_headrule_tl {
  \draw [__gzt_headrule_color,line~ width=\c__gzt_header_line_width_dim]
  ([yshift=\c__gzt_header_line_yshift_dim]current~ page~ header~ area.south~ east)
  --
  ([yshift=\c__gzt_header_line_yshift_dim]current~ page~ header~ area.south~ west -| current~ page.north~ west)
  ;
}
```

The mainmatter even page head rule:

```
\tl_new:N \g__gzt_mainmatter_evenpage_headrule_tl
\tl_gset:Nn \g__gzt_mainmatter_evenpage_headrule_tl {
  \draw [__gzt_headrule_color,line~ width=\c__gzt_header_line_width_dim]
```

```
  ([yshift=\c__gzt_header_line_yshift_dim]current~ page~ header~ area.south~ west)
  --
  ([yshift=\c__gzt_header_line_yshift_dim]current~ page~ header~ area.south~ east -| current~ page.north~ east)
  ;
}
```

We momentarily switch to a “normal” category code régime in which the colon (:) is treated as “letter”, which is necessary where (here TikZ and tcolorbox) code makes use of colon.

```
\ExplSyntaxOff
\tcbuselibrary{breakable,skins,hooks,xparse,theorems,listingsutf8}
\usetikzlibrary{babel,fadings,positioning,calc}
```

We create a “minus” version of each of the previous styles for floats with number (and keywords) but without any caption: in such cases, the number should not be followed by any separator.

```
\tcbset{
  new/blend into/tables-/.style={
    use counter*=table,
    /tcb/code={\appto\tcb@new@colopt{,before title={\fnum@table}}}},
  new/blend into/figures-/.style={
    use counter*=figure,
    /tcb/code={\appto\tcb@new@colopt{,before title={\fnum@figure}}}},
}
```

⟨/class | class-article⟩

```

We define a public macro for possible acknowledgements to be used by author(s) of articles.

```
\NewDocumentCommand \acknowledgements { +m } {
  \__gzt_article_acknowledgements:n {#1}
}
```

`\printminibios` We define the public command which displays

- the affiliation(s), email(s) and minibiographie(s) of the authors,
- the acknowledgements if not empty.

```
\NewDocumentCommand \printminibios { s } {
  \bool_if:NT {\g__gzt_multicols_bool} {
    \end{multicols}
  }
```

We force all the previous floats to be processed no later on the page following the beginning of the bibliography, CV or acknowledgements.

```
  \FloatBarrier
  \begin{__gzt_minibiographies_acknowledgements_tcbox}
    \nopagebreak[0]
    \IfBooleanF {#1}
    {
      \__gzt_display_people_by_role:n { author-art-\int_use:N \g__gzt_articles_int }
    }

      \end{multicols}
    }
```

```
    \bool_if:NT {\g__gzt_refsection_bool} {
      \end{refsection}
    }
    \cleancustomization
}
```

If we don't ask the cover page (only), the inside back cover and back cover pages are automatically included at the end of the document, the former containing some condensed instructions to authors. But, this cannot be done within `\AddToHook{enddocument}` and `\preto\@enddocumenthook` should be used instead (see https://tex.stackexchange.com/q/240318/18401). (Update (2021-02-14): we now rely on the new `\AddToHook{env/document/end}`.)

```
\bool_if:NF {\g__gzt_coverpage_bool} {
  \bool_if:NF {\g__gzt_inside_pages_bool} {
    \AddToHook{enddocument}{
      \bool_gset_true:N \g__gzt_backmatter_bool
      \g__gzt_display_inside_backcover_tl
      \newpage
      \g__gzt_display_backcover_tl
    }
  }
}
```

If we don't ask the cover page (only), the document total page numbers should be a multiple of four and we add the necessary and sufficient number of blank pages if it isn't the case (code borrowed from https://tex.stackexchange.com/a/83498/18401).

```
\bool_if:NF {\g__gzt_coverpage_bool} {
  \bool_if:nF { \g__gzt_for_authors_bool } {
    \bool_if:nT { \g__gzt_inside_pages_bool } {
      \AddToHook{enddocument}{
        \prg_replicate:nn
        { \int_mod:nn { 4 - \int_mod:nn { \getpagerefnumber{LastPage} } { 4 } } { 4 } }
        { \thispagestyle{__gzt_blank_pages_ps}\null\clearpage }
      }
    }
  }
}
```

⟨/class⟩

```
⟨*class-article⟩
\ProcessKeysOptions { gztarticle }
\AddToHook{enddocument}{
  \bool_if:NT {\g__gzt_multicols_bool} {
  \end{multicols}
  }
  \bool_if:NT {\g__gzt_refsection_bool} {
    \end{refsection}
  }
}
⟨/class-article⟩
⟨*class | class-article⟩
```

2.35 Miscellaneous settings

We gather here miscellaneous settings.

2.35.1 Related to pgfplots package

(French) Numbers format:

```
\pgfplotsset{
  /pgf/number~ format/.cd,
  use~ comma,
  1000~ sep={\,},
  min~ exponent~ for~ 1000~ sep=4
}
```

2.35.2 Related to biblatex package

```
\defbibheading{bibassection}[\bibname]{\section*{#1}}
\renewcommand{\bibfont}{\normalfont\footnotesize}
```

As bibiliographic resource, we add the file of the current issue.

```
\exp_after:wN\addbibresource\exp_after:wN{\c__gzt_issue_bib_path_string_tl}
```

We create a name format that prints the initial(s) of the first name(s) before last name of a cited author.

```
\@ifpackagelater{biblatex}{2016/01/01}{
  \DeclareNameFormat{giveninits-last}{
    \nameparts{#1}
    \usebibmacro{name:given-family}
    {\namepartfamily}
    {\namepartgiveni}
    {\namepartprefix}
    {\namepartsuffix}
    \usebibmacro{name:andothers}
  }
}{
  \DeclareNameFormat{giveninits-last}{
    \usebibmacro{name:first-last}{#1}{#4}{#5}{#7}
    \usebibmacro{name:andothers}
  }
}
\DeclareNameAlias{labelname}{giveninits-last}
```

We ensure the space between initial(s) and last name is unbreakable.

```
\renewcommand*\bibnamedelimc{\addnbspace}
\renewcommand*\bibnamedelimd{\addnbspace}

\renewbibmacro{in:}{
  \ifentrytype{article}{}{\printtext{\bibstring{in}\intitlepunct}}}
\renewbibmacro*{journal}{
  \iffieldundef{shortjournal}
    {
      \iffieldundef{journaltitle}
        {}
        {
          \printtext[journaltitle]
            {
              \printfield[titlecase]{journaltitle}
              \setunit{\subtitlepunct}
```

```
              \printfield[titlecase]{journalsubtitle}
            }
        }
    }
    {\printtext[journaltitle]{\printfield[titlecase]{shortjournal}}}
}
\renewbibmacro*{volume+number+eid}{
  \printfield{volume}
  \setunit{\addcomma\c_space_tl}
  \printfield{number}
  \setunit{\addcomma\c_space_tl}
  \printfield{eid}}

\DeclareFieldFormat[book]{volume}{\mkbibbold{#1}}
\DeclareFieldFormat[article]{number}{\bibstring{number}#1}
\DeclareLanguageMapping{french}{gzt}
```

2.35.3 Related to kpfonts package

We replace the kpfonts' "mathfrak" by the one from "eufrak", as the former doesn't provide Euler Fraktur digits.

```
\DeclareMathAlphabet\mathfrak{U}{euf}{m}{n}
\SetMathAlphabet\mathfrak{bold}{U}{euf}{b}{n}
```

2.35.4 Related to draftwatermark package

```
\@ifpackageloaded{draftwatermark}{
  \SetWatermarkColor{gray!10}
  \SetWatermarkFontSize{30mm}
  \SetWatermarkText{\text_uppercase:n{\c__gzt_draftwatermark_string_tl}}
}{
}
```

2.35.5 Related to TikZ package

```
\tikzset{
  __gzt_dots/.style={
    line~ width=\c__gzt_tikz_dot_diameter_dim,
    line~ cap=round,
```

```
    dash~ pattern=on~ 0pt~ off~ \c__gzt_tikz_dot_spacing_dim
  },
  __gzt_tcb_segmentation_style/.style={
    __gzt_dots,
    draw=__gzt_dotfill_color,
    shorten~ >=~ \c__gzt_tcb_left_dim+\c__gzt_tcb_boxsep_dim,
    shorten~ <=~ \c__gzt_tcb_left_dim+\c__gzt_tcb_boxsep_dim,
  }
}
```

2.35.6 Related to tcolorbox package

We set some styles for

- the two public environments `gztfigure(*)` and `gzttable(*)` for the usual floats,
- the book reviews,
- the book advertisements,
- the inside frontcover,

whom layout is based upon tcolorbox features.

```
\tcbset{
  copyright/.style={
    overlay={
      \node[rotate=90,anchor=south~ west,font=\tiny] at (frame.south~ east) {
        \begin{minipage}[t]{\tcbtextheight}
          \copyright{}~ #1
        \end{minipage}
      };
    }
  }
}
\tcbset{
  __gzt_tcb_floats_style/.style={
    enhanced
    ,every~ float=\centering
    ,coltitle=__gzt_generic_dark_color
```

```
    ,colbacktitle=__gzt_float_title_bg_color
    ,colback=white
    ,colframe=__gzt_float_frame_color
    ,center~ upper
    ,sharp~ corners=all
    ,boxrule=0.3mm
  }
}
\tcbset{
  __gzt_tcb_notitle/.style={
    blend~ before~ title~ code={##1}
    ,title={\c_space_tl}
  }
}
\tcbset{
  __gzt_tcb_book_review_box_style/.style={
    enhanced,
    colback=__gzt_book_review_frame_bg_color,
    breakable,

    height~ fixed~ for=middle,
  }
}
\tcbset{
```

```
  enlargepage~ flexible=\baselineskip,
  left=\c__gzt_tcb_left_dim,
  boxsep=\c__gzt_tcb_boxsep_dim,
}
```

2.35.7 Lists

We now set the lists layout in order to benefit from enumitem package's features and preserve the layout from frenchb.

```
\setlist[1]{labelindent=\parindent}
\setlist[itemize]{label=\textendash{}, nosep}
\setlist{
  labelwidth=\widthof{\textendash},
  itemsep=0.4ex plus 0.2ex minus 0.2ex,
  parsep=0.4ex plus 0.2ex minus 0.2ex,
  topsep=0.8ex plus 0.4ex minus 0.4ex,
  partopsep=0.4ex plus 0.2ex minus 0.2ex,
  leftmargin=!
}
```

```
\setlist[description]{
  font=
  \bool_if:nTF { \g__gzt_books_rubric_bool || \g__gzt_inside_frontcover_bool || \g__gzt_inside_backcover_bool }
  {
    \color{black}
  }{
    \color{__gzt_description_label_light_color}
  }
  \bfseries
}
```

2.35.8 Miscellaneous

We fix the csquotes' quotes for PDF strings.

```
\DeclarePlainStyle{«~ }{~ »}{^}{'}
```

We change the default settings of the floats placement.

```
\setcounter{topnumber}{3}
\renewcommand{\topfraction}{0.8}
```

We change the default vertical space between text and footnotes.

```
\addtolength{\skip\footins}{.25\baselineskip}
```

We change the default horizontal space between columns in multicolumn mode.

```
\setlength{\columnsep}{7mm}
```

We change the way the section counter is displayed (the chapter should not appear).

```
\renewcommand{\thesection}{\arabic{section}}
```

In case siunitx package is loaded, we make it follow the French rules.

```
\@ifpackageloaded{siunitx}{
  \sisetup{locale=FR}
}
```

We change the color of the table rules.

```
\arrayrulecolor{__gzt_arrayrule_color}
```

We change the floating table name (as translated by the french-babel module from babel package) from “Table” to “Tableau”.

```
\addto\captionsfrench{\def\tablename{{\scshape Tableau}}}
```

2.36 Miscellaneous (re)definitions

We gather here miscellaneous redefinitions.

2.36.1 Vectors

Vectors, even written with \vec, are typeset with esvect’s \vv:

```
\RenewDocumentCommand \vec { m } {
  \vv{#1}
}
```

\usetikzlibrary The \usetikzlibrary switch is redefined in order to get rid of the bug reported here: https://sourceforge.net/p/pgf/bugs/353/.

```
\cs_set_eq:NN \__gzt_orig_usetikzlibrary \usetikzlibrary
\RenewDocumentCommand \usetikzlibrary { m } {
  \shorthandoff{:}
  \__gzt_orig_usetikzlibrary{#1}
  \shorthandon{:}
  % \begingroup
  % \NoAutoSpacing
  % \__gzt_orig_usetikzlibrary{#1}
  % \endgroup
}
```

(*End definition for* `\usetikzlibrary`*. This function is documented on page* ??.)

2.36.2 Usual theorems and the like

Some usual theorems and the like are defined, thanks to thmtools package. First, we define a private function `\_@@_new_theorem` that defines:

1. a new (private, thmtools) theorem with 4 arguments:
   (a) possible additional options to the style `_@@_tcb_alltheorems_style` defined earlier for all "theorems",
   (b) name of the (private) thmtools theorem,
   (c) French title for this theorem,
   (d) English title for this theorem.
2. a public environment based on this private theorem with a the usual syntax of amsthm theorems, except it has an optional argument for possible additional options to the default styles (`theorem` or `definition`).

__gzt_bilingual

```
\cs_new_protected:Nn \__gzt_bilingual:nnn
{
  \deftranslation[to=French]{#1}{#2}
  \deftranslation[to=English]{#1}{#3}
}
```

(*End definition for* `\__gzt_bilingual`.)

```
\cs_new_protected:Nn \__gzt_new_theorem:nnnn
{
  % \__gzt_bilingual:nnn {#2}{#3}{#4}
  \deftranslation[to=French]{#2}{#3}
  \deftranslation[to=English]{#2}{#4}
  \declaretheorem[
  #1,
  name=\translate{#2}
  ]{#2}
  \declaretheorem[
  #1,
  name=\translate{#2},
  numbered=no
  ]{#2*}
}
\cs_generate_variant:Nn \__gzt_new_theorem:nnnn { nnVV }
\declaretheoremstyle[spaceabove=3pt,notefont=\bfseries,bodyfont=\itshape]{theorem}
\declaretheoremstyle[spaceabove=3pt,notefont=\bfseries,bodyfont=\normalfont]{definition}
\declaretheoremstyle[spaceabove=3pt,bodyfont=\normalfont,
  qed=\ensuremath{\qedsymbol},headfont=\normalfont\itshape,numbered=no]{proof}
```

Then, we define a public command, similar to `\newtheorem`, based on `\_@@_new_theorem`, that lets the user define his own theorems:

```
\RenewDocumentCommand \newtheorem { O{} m }
{
  \tl_clear:N \l__gzt_newtheorem_style_tl
  \tl_clear:N \l__gzt_newtheorem_frenchtitle_tl
  \tl_clear:N \l__gzt_newtheorem_englishtitle_tl
  \tl_set:Nn \l__gzt_newtheorem_englishtitle_tl {
    \text_titlecase:n {#2}
  }
  \tl_set:Nf \l__gzt_newtheorem_frenchtitle_tl {
    \l__gzt_newtheorem_englishtitle_tl
  }
  \tl_set:Nn \l__gzt_newtheorem_style_tl {
    theorem
```

```
  }
  \IfNoValueF {#1}
  {
    \keys_set:nn { gzt/newtheorem } { #1 }
  }
  % \tl_if_eq:VVF { \l__gzt_newtheorem_englishtitle_tl } { \MakeUppercase #2 }
  %   {
  %     \tl_if_eq:NNF { \l__gzt_newtheorem_frenchtitle_tl } { \l__gzt_newtheorem_englishtitle_tl }
  %     {
  %     \tl_set:Nf \l__gzt_newtheorem_frenchtitle_tl {
  %       \l__gzt_newtheorem_englishtitle_tl
  %     }
  %   }
  % }
  \__gzt_new_theorem:nnVV
  {style=\l__gzt_newtheorem_style_tl}
  {#2}
  {\l__gzt_newtheorem_frenchtitle_tl}
  {\l__gzt_newtheorem_englishtitle_tl}
}
```

Finally, we define some usual theorems:

```
\newtheorem[frenchtitle=Th\'eor\`eme]{theorem}
% \newtheorem[frenchtitle=Th\'eor\`eme,englishtitle=Theorem]{theoreme}
\newtheorem[frenchtitle=Corollaire]{corollary}
% \newtheorem[englishtitle=corollary]{corollaire}
\newtheorem{conjecture}
\newtheorem{proposition}
\newtheorem[frenchtitle=Lemme]{lemma}
% \newtheorem[englishtitle=Lemma]{lemme}
\newtheorem[frenchtitle=Axiome]{axiom}
% \newtheorem[englishtitle=Axiom]{axiome}
%
\newtheorem[style=definition,frenchtitle=D\'efinition]{definition}
\newtheorem[style=definition,frenchtitle=Remarque]{remark}
\newtheorem[style=definition,frenchtitle=Exemple]{example}
\newtheorem[style=definition]{notation}
```

```
%
\let\proof\relax
\newtheorem[style=proof,frenchtitle=Preuve]{proof}
%
\cs_new_protected:Nn \__gzt_clone_theorem:nn
{
  \NewDocumentEnvironment{#1}{}
  {
    \begin{#2}
    }
    {
    \end{#2}
  }
  \NewDocumentEnvironment{#1*}{}
  {
    \begin{#2*}
    }
    {
    \end{#2*}
  }
}
\__gzt_clone_theorem:nn {theoreme} {theorem}
\__gzt_clone_theorem:nn {corollaire}{corollary}
\__gzt_clone_theorem:nn {lemme}{lemma}
\__gzt_clone_theorem:nn {axiome}{axiom}
\__gzt_clone_theorem:nn {remarque}{remark}
\__gzt_clone_theorem:nn {exemple}{example}
\__gzt_clone_theorem:nn {preuve}{proof}
```

2.36.3 (Reciprocal) Trigonometric and hyperbolic functions

Reciprocal trigonometric functions, even written with usual \arccos, \arcsin, \arctan, etc. are typeset with an uppercase “A”:

```
\DeclareMathOperator{\cotan}{cotan}
\DeclareMathOperator{\Arccos}{Arccos}
\DeclareMathOperator{\Arcsin}{Arcsin}
\DeclareMathOperator{\Arctan}{Arctan}
\DeclareMathOperator{\Argch}{Argch}
```

```
\DeclareMathOperator{\Argsh}{Argsh}
\DeclareMathOperator{\Argth}{Argth}
\cs_set_eq:NN \__gzt_orig_arccos \arccos
\cs_set_eq:NN \__gzt_orig_arcsin \arcsin
\cs_set_eq:NN \__gzt_orig_arctan \arctan
\RenewDocumentCommand \arccos {} {
  \IfLanguageName {french}{\Arccos}{\__gzt_orig_arccos}
}
\RenewDocumentCommand \arcsin {} {
  \IfLanguageName {french}{\Arcsin}{\__gzt_orig_arcsin}
}
\RenewDocumentCommand \arctan {} {
  \IfLanguageName {french}{\Arctan}{\__gzt_orig_arctan}
}
\DeclareMathOperator{\ch}{ch}
\DeclareMathOperator{\sh}{sh}
\cs_set_eq:NN \__gzt_orig_tanh \tanh
\RenewDocumentCommand \tanh {} {
  \IfLanguageName {french}{\operatorname{th}}{\__gzt_orig_tanh}
}
\cs_set_eq:NN \__gzt_orig_log \log
\cs_set_eq:NN \__gzt_orig_lg \lg
\RenewDocumentCommand \log { s } {
    \IfBooleanTF {#1}
  {
    \__gzt_orig_log
  }
  {
    \ln
  }
}
\RenewDocumentCommand \lg { s } {
    \IfBooleanTF {#1}
  {
    \__gzt_orig_lg
  }
  {
    \ln
```

```
  }
}
\cs_set_eq:NN \__gzt_orig_leq \leq
\cs_set_eq:NN \__gzt_orig_geq \geq
\RenewDocumentCommand \le {} {
  \IfLanguageName {french}{\leqslant}{\__gzt_orig_leq}
}
\RenewDocumentCommand \leq {} {
  \IfLanguageName {french}{\leqslant}{\__gzt_orig_leq}
}
\RenewDocumentCommand \ge {} {
  \IfLanguageName {french}{\geqslant}{\__gzt_orig_geq}
}
\RenewDocumentCommand \geq {} {
  \IfLanguageName {french}{\geqslant}{\__gzt_orig_geq}
}
\NewDocumentCommand \N {} {\mathbb{N}}
\NewDocumentCommand \Z {} {\mathbb{Z}}
\NewDocumentCommand \D {} {\mathbb{D}}
\NewDocumentCommand \Q {} {\mathbb{Q}}
\NewDocumentCommand \R {} {\mathbb{R}}
\NewDocumentCommand \C {} {\mathbb{C}}
\NewDocumentCommand \K {} {\mathbb{K}}
```

We define a token list variable that contains the color of the description labels because it won't be constant but will be:

- black in the front matter and in the books rubric

We now leave the LaTeX3 programming environment.

```
% \ExplSyntaxOff
```

\begin{authorsinstructions}
  \begin{description}
  \item[Objectifs de la \gzt*{}.] Bulletin interne de la \smf{}, la \gzt{} est
    un support privilégié d'expression au sein de la communauté
    mathématique. À ce titre, elle informe de l'actualité des mathématiques, de
    leur enseignement, de leur histoire, de leur relations avec d'autres
    sciences (physique, informatique, biologie, etc.).

    On y trouve donc des articles scientifiques de présentation, ainsi que des
    récensions de parutions mathématiques récentes. Elle contient aussi des
    informations sur tout ce qui concerne la vie professionnelle d'un
    mathématicien (recrutements, conditions de travail, publications
    scientifiques, etc.) et aussi des témoignages ou des tribunes libres.

    La \gzt{} paraît à raison de quatre numéros par an avec, optionnellement, un
    numéro spécial consacré à un sujet particulier de mathématiques ou bien à un
```

```
  grand mathématicien.

  Elle est envoyée gratuitement à chaque adhérent. Les numéros actuel et
  anciens sont disponibles en ligne
  (\url{https://smf4.emath.fr/Publications/Gazette/}).

\item[Soumission d'article.] Les articles doivent être envoyés au secrétariat,
  de préférence par courrier électronique (\email{gazette@dma.ens.fr}), pour
  être examinés par le comité de rédaction. Si un article est accepté, son
  fichier source doit alors être fourni, de préférence sous forme d'un fichier
  \TeX{} ou, à l'extrême rigueur, LibreOffice, OpenOffice ou
  Word\textregistered{} ; une saisie de manuscrits est cependant possible pour
  des textes courts.

  Les fichiers \TeX{} doivent :
  \begin{itemize}
  \item de préférence recourir au format \LaTeXe{} : éviter les commandes des
    autres formats (tels que plain \TeX{}) ;
  \item être si possible \enquote{encodés} en \texttt{UTF-8} ;
  \item être le plus \enquote{pur} possible : éviter les macros
    \enquote{exotiques} ainsi que les insertions manuelles d'espacements
    horizontaux ou verticaux (\gztverb{\hspace}, \gztverb{\hskip},
    \gztverb{\vspace}, \gztverb{\vskip}, \gztverb{\enlargethispage}, etc.).
  \end{itemize}
  Les illustrations qui ne sont pas directement codées en \TeX{} doivent être
  fournies aux formats \texttt{.pdf} (à privilégier) ou, avec un bonne
  définition (300~\textsc{dpi} minimum), \texttt{.png} ou \texttt{.jpg}. Le
  format \texttt{.eps}, quoique indirectement supporté, est déconseillé.

  Pour faciliter la composition de textes destinés à la \gzt{}, la \smf{}
  propose la classe \LaTeX{} \gztarticlecl{} fournie par les distributions
  \TeX{} courantes (\TeX{} Live et Mac\TeX{} \aside{à partir de leur version
    2015} ainsi que MiK\TeX{}), et sinon téléchargeable depuis la page
  \url{https://ctan.org/pkg/gzt}.  Sa documentation détaillée se trouve à la
  page \url{https://mirrors.ctan.org/macros/latex/contrib/gzt/doc/gzt-fr.pdf}.
  On prendra garde au fait que l'usage de cette classe nécessite une
  distribution \TeX{} à jour.
```

```
Pour plus de détails, consulter la page
\url{https://smf.emath.fr/les-publications/la-gazette}.
%
% \item[Rubrique \enquote{Mathématiques}] La \gzt{} publie des articles de
%   mathématiques et d'interactions ou applications des mathématiques,
%   chargés
%   de présenter un résultat, exposer une notion ou de commenter une
%   actualité.
%
%   Ils s'adressent à un public étendu. Les textes privilégiés sont courts,
%   pédagogiques et illustrés par des exemples.
%
%   La bibliographie ne vise pas à l'exhaustivité et se concentre sur les
%   textes
%   introductifs et de référence.
%
%   Les articles d'histoire des mathématiques ou contenant des vues
%   historiques
%   ou épistémologiques sont également bienvenus et doivent être conçus dans
%   le
%   même esprit.
%
% \item[Rubrique \enquote{Livres}] La rubrique \enquote{Livres} publie des
%   recensions s'attachant à présenter des ouvrages de mathématiques et des
%   ouvrages sur les mathématiques (leur histoire, leur philosophie, et plus
%   généralement tout ce qui a trait aux mathématiques et aux
%   mathématiciens).
%
%   Quelques recommendations :
%   \begin{itemize}
%   \item Commencez la recension en donnant quelques informations sur le
%     livre
%     (titre, nom l'auteur, collection à laquelle il appartient, nom de
%     l'éditeur, ville de la maison d'édition, année de la publication,
%     nombre
%     de pages, \textsc{isbn} et prix en euros ou en dollars).
%   \item Précisez à quel public (de quel niveau) s'adresse le livre.
%   \item Vous êtes libre de dire ce que vous pensez (dans les limites de la
```

```
    %     politesse et de la correction). Le comité de rédaction se réserve la
    %     décision finale de publication après relecture de votre recension.
    %   \item Les recensions doivent être brèves (une ou deux pages, trois au
    %     maximum) et synthétiser l'apport original d'un ouvrage. Dans le cas
    %     des
    %     ouvrages de mathématiques, elles n'ont pas pour objectif de rendre
    %     compte
    %     d'une théorie et d'en donner un exposé ; la recension proprement dite
    %     peut
    %     toutefois être précédée, à titre d'introduction à l'analyse de
    %     l'ouvrage,
    %     d'un bref exposé panoramique et historique des idées générales du
    %     domaine.
    %   \item N'insérez pas de bibliographie.
    %   \item Signez de vos nom et prénom et indiquez les noms de
    %     l'établissement et
    %     de la ville où vous exercez.
    %   \end{itemize}
  \end{description}
\end{authorsinstructions}
