Lemma's disambiguation

Summarium

This file provides an example of lemma's disambuigation.

All word which can potentially be twice (or more) in a same line is marked by an `\sameword`. *reledmac* prints the word rank only if the word is effectively printed twice (or more) time in the same line.

For use with `\lemma`, please read the handbook.

1 Leo aut ursus aut oryx aut ricinus aut equus aut lupus aut canis aut felix aut asinus
2 aut burricus.
