The UWA Letterhead Package

uwa-letterhead 1.0.1 (2021/09/13)

1 Introduction

This package generates the letterhead of The University of Western Australia.

2 Usage

2.1 External Dependencies

You must supply the university logo (as `uwacrest-blue.pdf` by default). It is available in SVG format at https://static-listing.weboffice.uwa.edu.au/visualid/core-rebrand/img/uwacrest/.

The letterhead uses the Arial typeface for the first-page footer and the UWA Slab typeface for headings. The fonts must be installed on the system for this to work. Arial is available as part of Microsoft's TrueType core fonts for the web (https://sourceforge.net/projects/mscorefonts2/), and UWA Slab is available from the UWA website (https://static-listing.weboffice.uwa.edu.au/visualid/core-rebrand/fonts/uwa/). Alternatively, you can use the `noarial` and `nouwafont` package options to substitute these with the body text typeface.

2.2 Package Options

`\usepackage` To load the package, add this to your preamble:

```
\usepackage{uwa-letterhead}
```

You can pass the following options to specify the font weights:

- `light`: Use light and semibold fonts (default).
- `regular`: Use regular and bold fonts.

You can pass the following options to specify whether to use UWA Slab for headings:

- `uwafont`: Use UWA Slab for headings (default).
- `nouwafont`: Use the body text typeface for headings.

You can pass the following options to specify whether to include the first-page footer:

- `footer`: Include the first-page footer.
- `nofooter`: Do not include the first-page footer (default).

You can pass the following options to specify whether to use Arial for the first-page footer:

- `arial`: Use Arial for the first-page footer (default).
- `noarial`: Use the body text typeface for the first-page footer.

3.12 Document Title

\@maketitle

The default `\@maketitle` forces a new page, adds vertical space at the top of the page, and includes the author and date, all of which are inappropriate when using the letterhead; so redefine `\@maketitle` without those parts.

```
\def\@maketitle{%
        \begin{center}%
                \let\footnote\thanks
                {\LARGE \uwalh@uwa \@title \par}%
        \end{center}%
        \par
        \vskip 1.5em%
}
```

\maketitle

The default `\maketitle` handles the `twocolumn` and `title page` options, both of which are inappropriate when using the letterhead, so redefine `\maketitle` without those parts.

```
\renewcommand\maketitle{\par
        \begingroup
```

```
        \renewcommand\thefootnote{\@fnsymbol\c@footnote}%
        \def\@makefnmark{\rlap{\@textsuperscript{\normalfont\@thefnmark}}}%
        \long\def\@makefntext##1{\parindent 1em\noindent
                \hb@xt@1.8em{%
                        \hss\@textsuperscript{\normalfont\@thefnmark}}##1}%
        \global\@topnum\z@
        \@maketitle
        \thispagestyle{empty}\@thanks
        \endgroup
        \setcounter{footnote}{0}%
        \global\let\thanks\relax
        \global\let\maketitle\relax
        \global\let\@maketitle\relax

        \global\let\@title\@empty
        \global\let\title\relax
        \global\let\author\relax
        \global\let\date\relax
        \global\let\and\relax
}
```
